Ρ	LC Devices		
	Bit Type Input Signals (CNC->PLC)	 	- 25 - 49 - 78 - 92 - 93 - 95

M01 Dog overrun 0001

Details When returning to the reference position, the near-point detection limit switch did not stop over the dog, but overran the dog.

Remedy - Increase the length of the near-point dog.

- Reduce the reference position return speed.

M01 Some ax does not pass Z phase 0002

One of the axes did not pass the Z-phase during the initial reference position return after the power was turned ON

Remedy - Move the detector one rotation or more in the opposite direction of the reference position, and repeat reference position return.

M01 R-pnt direction illegal 0003

When manually returning to the reference position, the return direction differs from the axis movement direction selected with the AXIS SELECTION key.

- The selection of the AXIS SELECTION kev's +/- direction is incorrect. The error is canceled by feeding the axis in the correct direction

M01 External interlock axis exists 0004

Details. The external interlock function has activated (the input signal is "OFF") and one of the axes has entered the interlock state

Remedy - As the interlock function has activated, release it before resuming operation.

Correct the sequence on the machine side.
 Check for any broken wires in the "interlock" signal line.

M01 Internal interlock axis exists 0005

Details The internal interlock state has been entered.

The absolute position detector axis has been removed. A command for the manual/automatic simultaneous valid axis was issued from the automatic

mode The manual speed command was issued while the "tool length measurement 1" signal is ON. A travel command has been issued to an inclined axis whose base axis is in control axis synchronization across part systems

Remedy - The servo OFF function is valid, so release it first.

An axis that can be removed has been issued, so perform the correct operations.

- The command is issued in the same direction as the direction where manual skip turned ON, so perform the correct operations.

 During the manual/automatic simultaneous mode, the axis commanded in the automatic mode became the manual operation axis. Turn OFF the "manual/automatic valid" signal for the commanded axis.

- Turn ON the power again, and perform absolute position initialization

- Turn OFF the "tool length measurement 1" signal to start the program by the manual speed

command

 Cancel the control axis synchronization across part systems, then issue a travel command to the inclined axis

M01 H/W stroke end axis exists 0006

Details The stroke end function has activated (the input signal is "OFF") and one of the axes is in the stroke end status.

Remedy

Move the machine manually.
 Check for any broken wires in the "stroke end" signal line.

- Check for any limit switch failure.

M01 S/W stroke end axis exists 0007

Details. The stored stroke limit I. II. IIB or IB function has activated.

- Move the machine manually Remedy

- Correct any setting error of the parameters for the stored stroke limit.

M01 Chuck/tailstock stroke end ax 0008

Details. The chuck/tail-stock barrier function turned ON, and an axis entered the stroke end state.

Remedy - Reset the alarm with reset, and move the machine in the reverse direction.

M01 Ref point return No. invalid 0009

Details 2nd reference position return was performed before 1st reference position return has been completed.

Remedy - Execute 1st reference position return.

M01 Sensor signal illegal ON 0019

Details The sensor signal was already ON when the "tool length measurement 1" signal was validated

The sensor signal turned ON when there was no axis movement after the "tool length measurement 1" signal was validated.

The sensor signal turned ON at a position within 100 μ m from the final entry start position.

Remedy - Disable the "tool length measurement 1" signal and move the axis in a safe direction.

Disabiling the sensor signal also clears the operation alarm.
(Note) When the "tool length measurement 1" signal is disabled, the axis can be moved in either direction. Pay attention to the movement direction.

M01 Ref point retract invalid 0020

Details Reference position retract was performed while the coordinates had not been established.

Remedy - Execute reference position return.

M01 Tool ofs invld after R-pnt 0021

Details Reference position return had been performed during the tool escape and return, which invalidated the tool compensation amount after the reference position return.

Remedy - The error is cleared if the operation mode is changed to other than reference position return before the axis performs reference position return.

- The error is cleared when the tool return is completed.
- The error is cleared if reset 1 is input or the emergency stop button is pushed.

M01 R-pnt ret invld at abs pos alm 0024

Details A reference position return signal was enabled during an absolute position detection alarm.

Remedy - Reset the absolute position detection alarm, and then perform the reference position return.

M01 R-pnt ret invld at zero pt ini 0025

Details A reference position return signal was input during zero point initialization of the absolute position detection system.

Remedy - Complete the zero point initialization, and then perform reference position return.

M01 High-accuracy skip disabled 0028

Details The drive unit's hardware or software does not conform to the high-accuracy skip.

Remedy - The software or hardware does not conform to the function. Contact service center,

M01 Hi-ac skip coord retrieval err 0029

Details Failed to retrieve the skip coordinate value from the drive unit.

Remedy - Check the wiring

- Check the parameters.

M01 Now skip on 0030

Details The "skip input" signal remains enabled when the operation has shifted from skip retract to measurement

Remedy - Increase the skip retract amount.

M01 No skip 0031

Details Even though the 1st skip was to the correct position, the 2nd skip could not be found.

Remedy - Check whether the measurement target has moved.

M01 Rtn dir err in manual measure 0033

Details Return direction in manual measurement is the opposite of the parameter setting.

Remedy - Check and correct the "#2169 Man meas rtm dir (Return direction in manual measurement)" setting.

 Move the axis manually to a safe position in the direction set by "#2169 Man meas rtrn dir (Return direction in manual measurement)", then reset.

M01 Movement prohibited during tool retract 0035

Details An axis movement was attempted from the tool retract position.

The movement was attempted by a manual command in the tool return.

Remedy

It is not allowed to move an axis arbitrarily from the tool retract position. Take the following steps to move the axis.

- Cancel the program execution by reset.

Use the tool escape and retract function and let the axis escape from the tool retract position.
 The interruption by a manual command is not allowed in a tool return. Take the following step to move the axis.

- Cancel the program execution by reset.

M01 Chopping axis R-pnt incomplete 0050

Details Chopping mode has been entered while the chopping axis has not completed reference position return.

All axes interlock has been applied.

Remedy - Reset the NC or disable the "chopping" signal, and then carry out the reference position return.

M01 Synchronous error excessive 0051

The synchronization error of the primary and secondary axes exceeded the allowable value under synchronous control. A deviation exceeding the synchronization error limit value was found with the synchronization deviation detection - Select the correction made and move one of the axes in the direction in which the errors are

Remedy

Details

- reduced
- Increase "#2024 synerr(allowable value)" or set "0" to disable error check.
- When using simple C-axis synchronous control, set "0" for "synchronous control operation method"

M01 No spindle select signal 0053

Details Synchronous tapping command was issued when the "spindle selection" signals for all spindles were OFF in the multiple-spindle control II.

Remedy

- Turn ON the "spindle selection" signal for the tapping spindle before performing the synchronous tapping command.

M01 No spindle serial connection 0054

Details Synchronous tapping command was issued in the multiple-spindle control II, while the spindle with the "spindle selection" signal ON was not serially connected

Remedy

- Make sure the "spindle selection" signal for the spindle is ON.
- Consider the machine construction when issuing the command

M01 Spindle fwd/rvs run para err 0055

Details. Asynchronous tapping command was issued when M code of the spindle forward/reverse run command, set by #3028 sprcmm", was one of the followings in the multiple-spindle control II. M0, M1, M2, M30, M98, M99, or M198

M code No, that commands to enable/disable the "macro interrupt" signal

Remedy - Correct the "#3028 sprcmm (Tap cycle spindle forward run/reverse run M command)" set-

M01 Tap pitch/thread number error 0056

Details The command for the pitch or the number of threads is not correct in the synchronous tapping command of the multiple-spindle control II.

The pitch is too small for the spindle rotation speed

Thread number is too large for the spindle rotation speed.

- Correct the pitch, number of threads or rotation speed of the tapping spindle.

M01 Wait for tap retract 0057

Details. The axis travel command is interlocked in the part system where the "Tap retract possible" signal is ON

- If tap retract is necessary, perform it before issuing an axis travel command. Remedy

- If tap retract is not necessary, cancel the tap retract enabled state.

M01 Handle ratio too large 0060

Details - The handle ratio is too large for the handle feed clamp speed.

(The handle feed clamp speed changes according to the rapid traverse rate, external feedrate, maximum speed outside the soft limit range and etc. (or external deceleration speed when external deceleration is valid))

Remedy - Change the settings of the handle feed clamp speed or the handle ratio.

M01 R-pos offset value illegal 0065

Details At the start of reference position initial setting, "#2034 rfpofs (Distance-coded reference position detection offset) is not set to "0"

Remedy - Set "#2034 rfpofs" to "0", then turn the power ON again to perform the reference position initial setting

M01 R-pos scan distance exceeded 0066

Details. Reference position could not be established within the maximum scan distance.

- Check the scale to see if it has dirt or damage. Remedy

Check if the servo drive unit supports this function.

M01 Illegal op in wk instl err cmp 0070

Details One of the following operations was attempted during workpiece installation error compensation.

- Manual interruption
 - Automatic operation handle interruption
- MDI interruption
 - PLC interruption

Remedy - Return the operation mode to the original mode to remove the cause

M01 No operation mode 0101

Details No operation mode

- Check for any broken wires in the input mode signal line. Remedy

- Check for any failure of the MODE SELECT switch.
- Correct the sequence program.

M01 Cutting override zero 0102

The "cutting feed override" switch on the machine operation panel is set to "0". The override was set to "0" during a single block stop. Details

- Set the "cutting feed override" switch to a value other than "0" to clear the error. Remedy

- If the "cutting feed override" switch has been set to a value other than "0", check for any short circuit in the signal line.
- Correct the sequence program

M01 External feed rate zero 0103

Details MANUAL FEEDRATE switch on the machine operation panel is set to "0" when the machine

is in the JOG or automatic dry run mode.
"Manual feedrate B" is set to "0" during the JOG mode when manual feedrate B is valid. "Each axis manual feedrate B" is set to "0" during the JOG mode when each axis manual fee-

drate B is valid Remedy

- Set the MANUAL FEEDRATE switch to a value other than "0" to release the error.
 If the MANUAL FEEDRATE switch has been set to a value other than "0" check for any short
 - circuit in the signal line.
- Correct the sequence program.

M01 F 1-digit feed rate zero 0104

Details The F1-digit feedrate has been set to "0" when the F1-digit feed command was executed.

Remedy - Set the F1-digit feedrate (from "#1185 spd_F1 (F1 digit feedrate F1)" to "#1189 spd_F5 (F1 digit feedrate F5)").

M01 Spindle stop 0105

Details. The spindle stopped during the synchronous feed/thread cutting command.

Remedy - Rotate the spindle.

- If the workpiece is not being cut, start dry run.
- Check for any broken wire in the spindle encoder cable
- Check the connections for the spindle encoder connectors.
- Check the spindle encoder pulse.
- Correct the program. (commands and addresses)

M01 Handle feed ax No. illegal 0106

Details The axis, designated at handle feed, is out of specifications.

No axis has been selected for handle feed

- Check for any broken wires in the handle feed axis selection signal line. Remedy Correct the sequence program.

- Check the number of axes in the specifications.

M01 Spindle rotation speed over 0107

Details Spindle rotation speed exceeded the axis clamp speed during the thread cutting command. Remedy - Lower the commanded rotation speed.

M01 Fixed pnt mode feed ax illegal 0108

Details The axis, designated in the manual arbitrary feed, is out of specifications.

The feedrate in manual arbitrary feed mode is illegal.

Remedy - Check for any broken wires in the axis selection signal line or the feedrate line for the manual arbitrary feed mode

- Check the specifications for the manual arbitrary feed mode.

M01 Block start interlock 0109

Details An interlock signal has been input to lock the block start.

Remedy - Correct the sequence program.

M01 Cutting block start interlock 0110

Details An interlock signal has been input to lock the cutting block start.

Remedy - Correct the sequence program.

M01 Restart switch ON 0111

Details Restart switch has been turned ON and manual mode has been selected before the restart search is completed

- Search the block to restart Remedy

- Turn the restart switch OFF

M01 Program check mode 0112

Details. The automatic start button was pressed during program check or in program check mode.

Remedy - Press the reset button to cancel the program check mode.

M01 Auto start in buffer correct 0113

Details The automatic start button was pressed during buffer correction.

Remedy - Press the automatic start button after the buffer correction is completed.

M01 In reset process 0115

Details The automatic start button was pressed during resetting or tape rewinding

- When rewinding the tape, wait for the winding to end, or press the reset button to stop the winding, and then press the automatic start button
 - During resetting, wait for the resetting to end, and then press the automatic start button.

M01 Playback not possible 0117

Details. The playback switch was turned ON during editing.

Remedy

- Cancel the editing by pressing the input or previous screen key before turning ON the playhack switch

M01 Turn stop in normal line cntrl 0118

The turning angle at the block joint exceeded the limit during normal line control. Details

In normal line control type I:

"#1523 C_feed (Normal line control axis turning speed)" has not been set. In normal line control type II:

When turning in the inside of the arc, the set value for "#8041 C-rot. R" is larger than the arc radius

Remedy

- Correct the program.
 Correct the "#1523 C_feed (Normal line control axis turning speed)" setting.
 Correct the "#8041 C rot. R" setting.

M01 Reverse run impossible 0119

Details Either of the following conditions occurred:

- there is no block to run backward.
- eight blocks has been continued without any travel command.

Remedy - Execute forward run to clear the alarm - Reset to clear the alarm

M01 In synchronous correction mode 0120

Details. The synchronous correction mode switch was pressed in non-handle mode

Remedy - Select the handle or manual arbitrary feed mode.

- Turn OFF the correction mode switch

M01 No synchronous control option 0121

The synchronous control operation method was set (with R2589) while no synchronous con-Details trol option was provided.

Remedy - Set "0" for "synchronous control operation method".

M01 Computer link B not possible 0123

Details Cycle start was attempted before resetting was completed.

Computer link B operation was attempted at the 2nd or further part system in a multi-part sys-

tem

Remedy

- Perform the cycle start after resetting has been completed. Set "#8109 HOST LINK" to "0" and then set to "1" before performing the cycle start. Computer link B operation cannot be performed at the 2nd or further part system in a multi-
- part system.

M01 X/Z axes simultaneous prohibit 0124

Details The basic axis corresponding to the inclined axis was started simultaneously in the manual mode while the inclined axis control was valid.

- Turn the inclined axis and basic axis start OFF for both axes. (This is also applied for man-Remedy ual/automatic simultaneous start)

Disable the basic axis compensation, or command it to axes one by one

M01 Rapid override zero 0125

Details The RAPID TRAVERSE OVERRIDE switch on the machine operation panel is set to "0".

Remedy

- Set the RAPID TRAVERSE OVERRIDE switch to a value other than "0" to clear the error.
- If the RAPID TRAVERSE OVERRIDE switch has been set to a value other than "0", check for any short circuit in the signal line.

- Correct the sequence program.

M01 Program restart machine lock 0126

Details. Machine lock was applied on the return axis being manually returned to the restart position.

Remedy - Cancel the machine lock and resume the operation.

M01 Rot axis parameter error 0127

Details Orthogonal coordinate axis name does not exist. Rotary axis name does not exist.

A duplicate name is used for the designated orthogonal coordinate axis

The number of axes that were selected to change tool length compensation along the tool axis amount exceeds the maximum number of axes.

The designated orthogonal coordinate axis name is the same as the rotary axis name.

Remedy - Correct the rotary axis configuration parameters.

M01 Restart pos return incomplete 0128

Details Automatic return was performed with an axis whose return to the restart position was not com nlata

Remedy

Perform restart position return manually.
Enable "#1302 AutoRP (Automatic return by program restart)" before executing the automatic start.

M01 PLC interruption impossible 0129

Details After the automatic startup, the "PLC interrupt" signal was turned ON during buffer correction, program restart, arbitrary reverse run, tool escape and return, high-speed high-accuracy control II. or NURBS interpolation.

Remedy - By turning OFF the "PLC interrupt" signal, or by resetting the NC the error can be cancelled.

M01 Restart posn return disabled 0130

Details. Restart position return was attempted in a mode where the return is disabled.

Remedy - Correct the program restart position.

M01 Chopping override zero 0150

Details. The override became "0" in the chopping operation.

- Correct the setting of "chopping override" (R2503). - Correct the setting of "rapid traverse override" (R2502). Remedy

M01 Con mand axis chopping axis 0151

Details A chopping axis movement command was issued from the program during the chopping mode. (This alarm will not occur for the command with the movement amount "0".) (All axes interlock state will be applied.)

Remedy

Press the reset button or turn OFF the "chopping" signal. When the "chopping" signal is turned OFF, the axis returns to the reference position and performs the movement command in the program.

M01 Bottom dead center pos. zero 0153

Details The bottom dead center position is set to the same position as the upper dead center position.

Remedy - Correct the bottom dead center position.

M01 Chopping disable for handle ax 0154

Chopping has been attempted while the chopping axis is selected as the handle axis

Remedy - Select an axis other than the chopping axis as the handle axis, or start chopping after changing the mode to the other mode

M01 No speed set out of soft limit 0160

Details The axis, without any maximum speed outside of the soft limit range set, was returned from the outside of the soft limit range

Remedy

- Correct the "#2021 out_f (Maximum speed outside soft limit range)" setting.
- Correct the soft limit range (with "#2013 OT- (Soft limit I-)" and "#2014 OT+ (Soft limit I+)").

M01 Aux axis changeover error 0166

Details. One of the following attempts was made on an axis that can be switched to NC/auxiliary axis. A command was issued to an auxiliary axis from machining program

When there were more than one NC axis having a same name, a command was issued to

those axes from machining program.

- "NC axis control selection" signal was turned OFF while the NC axis was in motion.
- "NC axis control selection" signal was turned ON while the auxiliary axis was in motion.

- Turn ON the "NC axis control selection" signal to set the auxiliary axis to NC axis when issuing a command to the axis from machining program.

When more than one axis have a same name, let only one of the axes work as an NC axis.
 Do not change the "NC axis control selection" signal while the axis is in motion.

M01 III. op during T tip control 0170

Remedy

Details Illegal operation was attempted during tool tip center control.

Remedy - Change the operation mode to the previous one and restart.

M01 Illegal OP in tilted face cut 0185

Details. Any of the following illegal operations was attempted during inclined surface machining mode. Manual interrupt

Handle interrupt in automatic operation

MDI interrunt

- PLC interrupt

Arbitrary reverse run

Remedy - Switch the operation mode back to the previous to remove the cause of this failure.

M01 Interference check invalidated 0200

Details The 3D machine interference check is invalidated. This alarm is output to NC alarm 5.

Remedy - Validate all the interference check settings

- If there is any axis which has not completed zero point return, establish the zero point first.

M01 Machine interference 1 0201

Details

It was judged that an interference occurred in the No.1 step interference check and caused a deceleration stop

When machine interference is detected, the interfered part is highlighted (yellow/red) and the part's name is displayed on the 3D monitor's model display.

Remedy - Move the axis in a direction which does not cause interference.

Press RESET to cancel the alarm.

You can move the axis in the same travel direction as before the interference

But the axis movement is done using the 2nd step interference check distance. (In manual operation)

M01 Machine interference 2 0202

Details It was judged that an interference occurred in the No.2 step interference check and caused a deceleration stop

When machine interference is detected, the interfered part is highlighted (red) and the part's name is displayed on the 3D monitor's model display.

- Move the axis in a direction which doesn't cause interference. Remedy

Press RESET to cancel the alarm.

M01 Manual feed for 5-axis machining/Simultaneous command to multiple axes 0230

Details More than one axis was designated simultaneously in manual mode while the manual feed for 5-axis machining was valid

Remedy - Command the manual feed to each axis one by one.

M01 Manual feed for 5-axis machining/Selecting coordinate system illegal 0231

Details

 More than one of the three bits for selecting hypothetical coordinate system was turned ON.
 Hypothetical coordinate system was selected while the manual feed for 5-axis machining was invalidated by the parameter setting.

Remedy

- Check the sequence program.
- Validate the manual feed for 5-axis machining (parameter "#7912 NO_MANUAL").

M01 Illegal op in 5 ax tool R comp 0232

An illegal operation (such as manual interrupt) was attempted during tool radius compensation for 5-axis machining.

- Operations such as manual interrupt are disabled while the tool radius compensation for 5axis machining is being performed.

M01 Machining surface operation disabled 0250

Details Machining surface operation (selection, indexing or cancel) was attempted while the operation is disabled

Remedy

- Remedy Cancel the other modes so that the inclined surface machining command (G68.2), tool axis direction control (G53.1) and the inclined surface machining cancel command (G69) can be issued
 - Wait until the axes stop completely (until the smoothing for all axes reaches zero).
 - Perform operation search for machining programs.

M01 APLC password mismatch 0280

Details. The APLC authentication password is inconsistent.

Remedy - Contact the machine tool builder

M01 Illegal movement command during superimposition 1003

Details A machine command was issued to the superimposing axis

> Reference position return was attempted on the superimposing axis Skip command was issued to the master or superimposing axis

- Dog-type reference position return was attempted on the master axis.

Remedy - Correct the program.

M01 Superimposition command illegal 1004

Details

- Superimposition command (G126) was issued to the axis which is executing the following functions

Synchronization control

Milling interpolation

- Superimposition start command was issued to the axis which was under superimposition control.

- The superimposition command was issued to an axis that belongs to the same part system as a basic or synchronous axis of synchronization across part systems.

Remedy - Correct the program.

M01 G114.n command illegal 1005

Details G114.n has been commanded during the execution of G114.n.

G51.2 has been commanded when Ğ51.2 spindle-spindle polygon machining mode has been already entered at another part system

Remedy

- Command G113 to cancel the operation. Turn ON the "spindle synchronization cancel" signal to cancel the operation. Command G50.2 to cancel the operation.

- Turn ON the "spindle-spindle polygon cancel" signal to cancel the operation.

M01 Spindle in-use by synchro tap 1007

Details The spindle is being used in synchronized tapping.

Remedy - Cancel the synchronized tapping.

M01 SP-C ax ctrl runs independntly 1026

Details C axis mode command has been issued for polygon machining spindle C axis mode command has been issued for synchronized tapping spindle.

Polygon command has been issued for synchronized tapping spindle.

Spindle is being used as spindle/C axis

- Cancel the C axis command. Remedy

Cancel the polygon machining command.
 Cancel the C axis with servo OFF.

M01 Synchronization mismatch 1030

Different M codes were each commanded as synchronization M code in each of the two part Details systems

Synchronization with the "I" code was commanded in another part system during M code synchronization

Synchronization with the M code was commanded in another part system during synchronization with the "!" code

Remedy - Correct the program so that the M codes match.

- Correct the program so that the same synchronization codes are commanded.

M01 Multiple C axes select invalid 1031

Details The "C axis selection" signal has been changed when the multiple C axes selection is not available

The selected axis by the "C axis selection" signal cannot be controlled for the multiple C axes selection

Remedy - Correct the parameter settings and program.

M01 Tap retract Sp select illegal 1032

Details Tap retract has been executed with a different spindle selected. Cutting feed is in wait state until synchronization is completed.

Remedy - Select the spindle for which tap cycle was halted before turning ON the "tap retract" signal.

M01 Sp-Sp polygon cut interlock 1033

Details Cutting feed is in wait state until synchronization is completed.

Remedy - Wait for the synchronization to end.

M01 Mixed sync ctrl prmtr illegal 1034

Details There is a mistake in the settings of mixed control axis parameters (crsax [1] to [8]).

Mixed control was attempted within one and the same part system. Any of the parameter settings is disabling mixed control.

Remedy - Correct the parameter settings for the mixed control (cross axis control).

M01 Mixed sync ctrl disable modal 1035

Details Mixed control (cross axis control) was commanded for a part system in which the mixed con-

trol (cross axis control) is disabled as shown below

- During nose R compensation mode

During pole coordinate interpolation mode

During cylindrical interpolation mode

- During balance cut mode - During fixed cycle machining mode

During facing turret mirror image

- During constant surface speed control mode

- During hobbing mode

During axis name switch

An axis was transferred to another part system, and mixed control was attempted with the part system's maximum number of control axes exceeded.

An axis was removed from the part system, and mixed control was attempted with the part system's number of axes zero.

Another axis exchange was attempted to the axis which was already transferred to another part system for mixed control.

Remedy - Correct the program

M01 Synchro ctrl setting disable 1036

Details "Synchronous control operation method" was set (with R2589) when the mode was not the C axis mode

"Synchronous control operation method" was set (with R2589) in the zero point not set state. Mirror image is disabled.

External mirror image or parameter mirror image was commanded during facing turret mirror image.

Remedy - Set the contents of the R2589 register to "0".

- Correct the program and parameters.

M01 Synchro start/cancel disable 1037

Details Synchronous control start/cancel command was issued when the start/cancel is disabled.

Remedy - Correct the program and parameters.

M01 Move cmnd invld to synchro ax 1038

Details A travel command was issued to a synchronous axis in synchronous control.

Remedy - Correct the program.

M01 No spindle speed clamp 1043

Details The constant surface speed command (G96) was issued to the spindle which is not selected for the spindle speed clamp command (G92/G50) under Multiple spindle control II.

Remedy

Press the reset key and carry out the remedy below.

- Select the spindle before commanding G92/G50.

M01 Sp synchro phase calc illegal 1106

Details Spindle synchronization phase alignment command was issued while the "phase shift calculation request" signal was ON.

Remedy - Correct the program.

- Correct the sequence program.

M80 POSITION ERROR

Details An axis position is illegal

An alarm is displayed (AL4 is output) and a block stop is applied on the machining program When the block stop is not allowed in the thread cutting cycle and the like, the stop is applied at the next position where allowed.

Remedy

Carry out reset. Then confirm that the system starts the operation. If the alarm is displayed again, turn ON the emergency stop switch and turn the NC power OFF and ON.

M90 Parameter set mode

Details The lock for setup parameters has been released. Setting the setup parameters is enabled while automatic start is disabled.

Remedy

M91 INVALID MEASUR. 0002

Details Data is over the range

The measurement result exceeds the tool data setting range

Refer to the manual issued by the machine tool builder.

Remedy

Correct the settings of "#2015 tlml- (Negative direction sensor of tool setter)" and "#2016 tlml+ (Positive direction sensor of tool setter or TLM standard length)".

M91 INVALID MEASUR, 0003

Details

No corresponding No No measurement tool No. has been set.

The registered No. is out of the specifications.

Remedy Correct the measurement tool No.

M91 INVALID MEASUR. 0045

Details Measurement axis illegal

Sensor has been turned ON while two or more axes are moving.

Remedy

Move a single axis when the sensor is contacted.

M91 INVALID MEASUR. 0046

Details Measurement axis has not returned to reference position

Reference position return has not been executed on a measurement axis in an incremental

system

Remedy Carry out the reference position return on the measurement axis before measuring the tool.

M91 INVALID MEASUR, 0089

Details Sensor signal illegal ON

Sensor has already been ON when TLM mode is turned ON. The travel amount was so small

that the tool contacted the sensor.

Remedy All axes are interlocked when this alarm has occurred. Turn the TLM mode OFF or use the interlock cancel signal to move the tool off the sensor.

Ensure at least 0.1mm for the movement to the sensor.

M91 INVALID MEASUR. 9000

Details Speed at contact is below minimum

The tool has contacted the sensor at the lower speed than set in "#1508 TLM Fmin (Minimum speed toward tool setter)".

Remedy Correct the feed rate to move the tool to the sensor

I Alarms Operation Errors (M)

M91 INVALID MEASUR. 9001

Details

Speed at contact is over maximum

The tool has contacted the sensor at the higher speed than set in "#1509 TLM Fmax (Maxi-

mum speed toward tool setter)".

Remedy Correct the feed rate to move the tool to the sensor.

M91 INVALID MEASUR. 9002

Details

Change of compensation No. or sub-side selection during measurement
A compensation No. or sub-side valid signal state has been changed while a sensor signal is

ON or a compensation amount is being written.

Remedy Carry out the measurement again.

M91 INVALID MEASUR. 9003

Details Error on response timing of sensor signal

A compensation No. has been changed at the same time as a sensor's response.

Carry out the measurement again.

M92 IGNORE INT.LOCK

Details

Manual tool length measurement Interlock temporally canceled "M01 Operation error 0005" and "M01 Operation error 0019", which occur at manual tool length measurement, are temporally canceled. When a tool has contacted a sensor and "M01 Operation error 0019" has occurred, tool escape is enabled by temporarily turning ON the interlock cancel request. This alarm notifies that the interlock is disabled in the meantime.

Remedy

After carrying out the tool escape from the sensor, turn OFF the interlock temporary cancel signal for manual tool length measurement.

2. Stop Codes (T)

T01 Axis in motion 0101

Details Automatic start is not possible as one of the axes is moving.

Remedy - Try automatic start again after all axes have stopped.

T01 NC not ready 0102

Details. Automatic start is not possible as the NC is not ready.

Remedy - Another alarm has occurred. Check the details and remedy.

T01 Reset signal ON 0103

Details Automatic start is not possible as the "reset" signal has been input.

Remedy - Turn OFF the "reset" signal.
- Check for any failure of the reset switch which has caused the switch's continuous ON.

- Correct the sequence program.

T01 Auto operation pause signal ON 0104

Details. The feed hold switch on the machine operation panel is ON (valid).

Remedy - Correct the feed hold switch setting.

- The feed hold switch is B contact switch
- Fix any broken wires in the feed hold signal line.
- Correct the sequence program.

T01 H/W stroke end axis exists 0105

Details Automatic start is not possible as one of the axes is at the stroke end.

Remedy - Manually move any axis whose end is at the stroke end.

Check for any broken wires in the stroke end signal line - Check for any failure in the stroke end limit switch.

T01 S/W stroke end axis exists 0106

Details. Automatic start is not possible as one of the axes is at the stored stroke limit.

Remedy - Move the axis manually

- If the axis's end is not at the stroke end, check the parameters.

T01 No operation mode 0107

Details. The operation mode has not been selected.

Remedy - Select automatic operation mode

Check for any broken wires in the signal line for automatic operation mode (memory, tape,

T01 Operation mode duplicated 0108

Two or more automatic operation modes have been selected

Remedy - Check for any short circuit in the mode (memory, tape, MDI) selection signal line.

- Check for any failure in the switch. - Correct the sequence program

T01 Operation mode changed 0109

Details The automatic operation mode has changed to another automatic operation mode.

Remedy - Return to the original automatic operation mode, and execute automatic start.

T01 Tape search execution 0110

Details Automatic start is not possible as tape search is being executed.

Remedy - Wait for the tape search to be completed and then execute the automatic start.

T01 Cycle start prohibit 0111

Details Automatic start is disabled because restart search is in execution.

Remedy - Execute automatic start after the restart search is completed.

T01 CNC overheat 0113

Details Automatic start is not possible because a thermal alarm (Z53 CNC overheat) has occurred.

Remedy - Temperature of the control unit has exceeded the specified temperature.

- Take appropriate measures to cool the unit.

T01 Cycle st. prohibit(Host comm.) 0115

Details Automatic start cannot is not possible because the NC is communicating with the host computer.

Remedy - Wait for the communication with host computer to be ended and then execute the automatic start.

Stop Codes (T)

T01 Cycle st prohibit(Battery alm) 0116

<u>Details</u> Automatic start is not possible because the voltage of the battery in the NC control unit has dropped.

Remedy - Replace the battery of the NC control unit.

- Contact the service center.

T01 R-pnt offset value not set 0117

Details Automatic operation is not possible because no reference position offset value has been set.

Remedy - Perform the reference position initialization setting, then set "#2034 rfpofs(Distance-coded reference position detection offset)".

T01 Cycle start prohibit 0118

Details Tool retract position signal OFF

The axis was moved from the tool retract position. Tool retract position reached signal is OFF.

Remedy

Once the axis has been moved off the tool retract position, resuming the program is not possible. Cancel the program by reset and then execute it from the start.

T01 In absolute position alarm 0138

A start signal was input during an absolute position detection alarm.

Remedy - Clear the absolute position detection alarm, and then input the start signal.

T01 In abs posn initial setting 0139

A start signal was input during zero point initialization in the absolute position detection sys-

Remedy - Complete zero point initialization before inputting the start signal.

T01 Start during MDI operation at other part system disable 0141

Details In multi-part system, a start signal was input for MDI mode while the MDI operation was being carried out in another part system.

Remedy - End the other part system's operation before starting.

T01 Cycle start prohibit 0142

Details In manual coordinate system setting

Automatic start is not allowed during the manual coordinate system setting.

Remedy
The system restarts after either of the manual coordinate system setting completion signal or the error end signal has been turned ON.

T01 In manual measurement 0143

Details Automatic start is disabled because manual measurement is in execution.

Remedy - Execute automatic start after the manual measurement is completed.

T01 APLC password mismatch 0160

Details The APLC authentication password is inconsistent.

Remedy - Contact the machine tool builder

T01 Cycle start prohibit 0180

Details Automatic start became disabled while servo auto turning is enabled.

Remedy - Set "#1164 ATS" to "0" when the serve auto turning is not executed.

T01 Cycle start prohibit 0190

Details Automatic start is not possible because the setting of setup parameters is enabled.

Remedy - Refer to the manual issued by the machine tool builder.

T01 Cycle start prohibit 0191

Details Automatic start was attempted while a file was being deleted/written.

Remedy - Wait for the file to be deleted/written and then execute the automatic start.

T01 Cycle st. prohibit (Term exp'd) 0193

Details Automatic start is not possible because the valid term has been expired.

Remedy - Enter the decryption code and turn the power ON again.

T02 H/W stroke end axis exists 0201

Details An axis is at the stroke end

Remedy - Manually move the axis away from the stroke end limit switch.

- Correct the machining program.

Stop Codes (T)

T02 S/W stroke end axis exists 0202

Details An axis is at the stored stroke limit

Remedy

Manually move the axis.
 Correct the machining program.

T02 Reset signal ON 0203

Details The reset has been entered.

Remedy - The program execution position has returned to the start of the program. Execute automatic operation from the start of the machining program.

T02 Auto operation pause signal ON 0204

Details The "feed hold" switch is ON.

Remedy - Press the CYCLE START switch to resume the automatic operation.

T02 Operation mode changed 0205

Details. The operation mode has changed to another mode during automatic operation.

Remedy - Return to the original automatic operation mode, and press the CYCLE START switch to resume the automatic operation.

T02 Acc/dec time cnst too large 0206

Details The acceleration and deceleration time constants are too large. (This alarm occurs with the system alarm Z59.)

Remedy - Set a larger value for "#1206 G1bF(Maximum speed)".

Set a smaller value for "#1207 G1btL(Time constant)"
 Set a lower cutting speed.

T02 Abs posn detect alarm occurred 0215

Details An absolute position detection alarm occurred.

Remedy - Clear the absolute position detection alarm.

T02 Aux axis changeover error 0220

Details A travel command was issued to an auxiliary axis.

Remedy - Turn ON the "NC axis control selection" signal and press the CYCLE START switch to re-

T03 Single block stop signal ON 0301

Details. The SINGLE BLOCK switch on the machine operation panel is ON.

The SINGLE BLOCK or MACHINE LOCK switch changed.

Remedy - Press the CYCLE START switch to resume the automatic operation.

T03 Block stop cmnd in user macro 0302

Details A block stop command was issued in the user macro program.

Remedy - Press the CYCLE START switch to resume the automatic operation.

T03 Operation mode changed 0303

Details Automatic mode changed to another automatic mode.

Remedy - Return to the original automatic operation mode, and press the CYCLE START switch to resume the automatic operation.

T03 MDI completed 0304

Details MDI operation has ended the last block.

Remedy - Set the MDI operation again, and press the CYCLE START switch to start the MDI operation

T03 Block start interlock 0305

Details The interlock signal, which locks the block start, is ON.

Remedy - Correct the sequence program.

T03 Cutting blck start interlock 0306

Details The interlock signal, which locks the block cutting start, is ON.

Remedy - Correct the sequence program.

T03 Inclined Z offset change 0310

Details The "inclined axis control: No Z axis compensation" signal has turned ON or OFF during the program operation.

Remedy - Press the CYCLE START switch to resume the automatic operation.

T03 Aux axis changeover error 0330

Details The "NC axis control selection" signal was turned OFF while a NC axis was traveling.

 Remedy - Turn the "NC axis control selection" signal ON and press the CYCLE START switch to resume the automatic operation.

T04 Collation stop 0401

Details Collation stop occurred

Remedy - Execute the automatic start to resume the automatic operation.

T10 Fin wait (Factors for waiting completion)

Details

The following Nos, are shown during the operation of the corresponding completion wait factor. The numbers will disappear when the operation is completed.

The completion wait factor is indicated with four digits (in hexadecimal).

Display format of completion wait factor

(a)(b)(c)

Each of the hexadecimal numbers (a), (b) and (c) indicates the following details.

bit0: In dwell execution

bit3: Unclamp signal wait (Note 1)

(b)

bit0: Waiting for spindle position to be looped

bit3: Door open (Note 2)

(c)

bit0: Waiting for MSTB completion

bit1: Waiting for rapid traverse deceleration bit2: Waiting for cutting speed deceleration

bit3: Waiting for spindle orientation completion

(Note 1) This shows the wait state for the unclamp signal's ON/OFF for the index table indexing

(Note 2) This shows the door open state caused by the door interlock function.

T11 Fin wait 0010(Factors for waiting completion)

Details The following Nos. are shown during the operation of the corresponding completion wait fac-

tor. The numbers will disappear when the operation is completed.
The completion wait factor is indicated with four digits (in hexadecimal).

Display format of completion wait factor

(a)(b)(c)

Each of the hexadecimal numbers (a), (b) and (c) indicates the following details.

bit0:Operation alarm display being postponed Remedy The parameter "#1342 AlmDly" may be able to postpone displaying a part of an operation

alarm, depending on the setting.

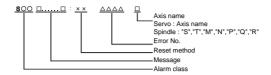

This stop code will remain displayed while any alarm is being postponed.

And it will disappear if the postponed alarm is displayed or canceled.

3. Servo/Spindle Alarms (S)

3.1 Servo Errors (S01/S03/S04)

Servo alarm is displayed in the following format.

Alarm class	Message	Reset method	Resetting methods
S01	Servo alarm	PR	After removing the cause of the alarm, reset the alarm by turning the NC power ON again.
S03	Servo alarm	NR	After removing the cause of the alarm, reset the alarm by inputting the NC RESET key.
S04	Servo alarm	AR	After removing the cause of the alarm, reset the alarm by turning the drive unit power ON again.

Error No. consists of four digits (0010 to). Servo alarms are explained in ascending order of the error No. The four digits on the left part of each alarm indicate the error No.

(Note) For the details of servo alarms, refer to your drive unit's instruction manual.

Drive unit alarme

0010 Insufficient voltage

Details A drop of bus voltage was detected in main circuit.
- Servo stop method: Dynamic stop

- Spindle stop method: Coast to a stop

0011 Axis selection error

Details The axis selection rotary switch has been incorrectly set.

Servo stop method: Initial error Spindle stop method: Initial error

0012 Memory error 1

Details A hardware error was detected during the power ON self-check.

Servo stop method: Initial error

- Spindle stop method: Initial error

0013 Software processing error 1

Details An error was detected for the software execution state

Servo stop method: Dynamic stop

- Spindle stop method: Coast to a stop

0016 Init mag pole pos detect err

Details In the built-in motor which uses the absolute position detector, the servo ON has been set be fore the magnetic pole shift amount is set.

The magnetic pole position, detected in the initial magnetic pole position detection control, is not correctly set.

Servo stop method: Dynamic stop
 Spindle stop method: Coast to a stop

0017 A/D converter error

Details A current feedback error was detected.

Servo stop method: Dynamic stop - Spindle stop method: Coast to a stop

0018 Motor side dtc: Init commu err

Details An error was detected in the initial communication with the motor side detector.

Servo stop method: Initial error - Spindle stop method: Initial error

0019 Detector commu err in syn cont

Details An error of the shared detector on the machine side was detected on the secondary axis of the speed command synchronization control.

- Servo stop method: Dynamic stop

Servo/Spindle Alarms (S)

001A Machine side dtc: Init comu er

Details An error was detected in the initial communication with the machine side detector.

- Servo stop method: Initial error
- Spindle stop method: Initial error

001B Machine side dtc: Error 1

An error was detected by the detector connected to the machine side.

The error details are different according to the detector type.

- Spindle stop method: Coast to a stop

[Detector alarm (Servo drive unit)]

AT343, AT543, AT545(Mitsutoyo) ROM/RAM error LC193M, LC493M, RCN223M, RCN227M, RCN727M, RCN827M, EIB Series(HEIDEN-HAIN) ROM/RAM error

- MPRZ Series(MHI) Scale breaking

SAM/SVAM/GAM/LAM Series (FAGOR) H/W error

[Detector alarm (Spindle drive unit)]
- MPCI scale(MHI) Scale breaking

(Note) A driver processes all reset types of alarms as "PR". However, "AR" will be applied according to the detector.

002F Motor side dtc: Commu error

Details An error was detected in the communication with the motor side detector.

Servo stop method: Dynamic stop
 Spindle stop method: Coast to a stop

0030 Over regeneration

Details Over-regeneration level exceeded 100%. The regenerative resistor is overloaded.

Servo stop method: Dynamic stop
 Spindle stop method: Coast to a stop

0031 Overspeed

Details. The motor speed exceeded the allowable speed.

Servo stop method: Deceleration stop enabled

Spindle stop method: Deceleration stop enabled

0032 Power module overcurrent

Details The power module detected the overcurrent.

- Servo stop method: Dynamic stop - Spindle stop method: Coast to a stop

0033 Overvoltage

Details. The bus voltage in main circuit exceeded the allowable value.

Servo stop method: Dynamic stop
 Spindle stop method: Coast to a stop

0034 NC-DRV commu: CRC error

Details. The data received from the NC was outside the setting range.

Servo stop method: Deceleration stop enabled

- Spindle stop method: Deceleration stop enabled

0035 NC command error

Details. The travel command data received from the NC was excessive.

Servo stop method: Deceleration stop enabled

- Spindle stop method: Deceleration stop enabled

0036 NC-DRV commu: Commu error

Details The communication with the NC was interrupted.

Servo stop method: Deceleration stop enabled

- Spindle stop method: Deceleration stop enabled

0037 Initial parameter error

Details An incorrect set value was detected among the parameters send from the NC at the power ON.

In the safety observation function, an error was detected in the relation between the safety speed and safety rotation number in the speed observation mode.

Servo stop method: Initial error

Spindle stop method: Initial error

0038 NC-DRV commu: Protocol error 1

Details An error was detected in the communication frames received from the NC.

Or, removing an axis or changing an axis was performed in the synchronous control. - Servo stop method: Deceleration stop enabled

Spindle stop method: Deceleration stop enabled

0039 NC-DRV commu: Protocol error 2

Details An error was detected in the axis data received from the NC

Or, in changing an axis, the parameter setting of the synchronous control was applied when the axis was installed.

- Servo stop method: Deceleration stop enabled

- Spindle stop method: Deceleration stop enabled

Servo/Spindle Alarms (S)

003A Overcurrent

Excessive motor drive current was detected.

- Servo stop method: Dynamic stop
 - Spindle stop method: Coast to a stop

003B Power module overheat

Details. The power module detected an overheat.

- Servo stop method: Dynamic stop
 Spindle stop method: Coast to a stop

003C Regeneration circuit error

Details. An error was detected in the regenerative transistor or in the regenerative resistor.

- Servo stop method: Dynamic stop

003D Pw sply volt err acc/dec

Details A motor control error during acceleration/deceleration, due to a power voltage failure, was detected

Servo stop method: Dvnamic stop

003E Magnet pole pos detect err

Details The magnetic pole position, detected in the magnetic pole position detection control, is not correctly detected.

- Servo stop method: Dynamic stop
 Spindle stop method: Coast to a stop

0041 Feedback error 3

Details Either a missed feedback pulse in the motor side detector or an error in the Z-phase was de-

- tected in the full closed loop system. Servo stop method: Dynamic stop
- Spindle stop method: Coast to a stop

0042 Feedback error 1

Details Fither a missed feedback pulse in the position detection or an error in the Z-phase was detected. Or the distance-coded reference check error exceeded the allowable value when the distance-coded reference scale was used.

- Servo stop method: Dynamic stop
 Spindle stop method: Coast to a stop

0043 Feedback error 2

Details An excessive difference in feedback was detected between the machine side detector and the motor side detector

- Servo stop method: Dynamic stop Spindle stop method: Coast to a stop

0045 Fan stop

Details An overheat of the power module was detected during the cooling fan stopping.

- Servo stop method: Dynamic stop
- Spindle stop method: Coast to a stop

0046 Motor overheat

Details Either the motor or the motor side detector detected an overheat

Or, the thermistor signal receiving circuit of the linear motor or DD motor was disconnected.

Or, the thermistor signal receiving circuit was short-circuited. - Servo stop method: Deceleration stop enabled

- Spindle stop method: Deceleration stop enabled

0048 Motor side dtc: Error 5

Details An error was detected by the detector connected to the main side. The error details are different according to the connected detector.

- Servo stop method: Dynamic stop

- Spindle stop method: Coast to a stop

(Note) A driver processes all reset types of alarms as "PR". However, "AR" will be applied according to the detector.

004C Current err mag pole estim

Details Current detection failed at the initial magnetic pole estimation.

- Servo stop method: Dynamic stop
- Spindle stop method: Coast to a stop

004E NC command mode error

Details An error was detected in the control mode send from the NC.

- Servo stop method: Deceleration stop enabled
- Spindle stop method: Deceleration stop enabled

004F Instantaneous power interrupt

Details The control power supply has been shut down for 50ms or more.

Servo stop method: Deceleration stop enabled
 Spindle stop method: Deceleration stop enabled

0050 Overload 1

Details Overload detection level became 100% or more. The motor or the drive unit is overloaded.

- Servo stop method: Deceleration stop enabled
 Spindle stop method: Deceleration stop enabled

0051 Overload 2

Details In a servo system, current command of 95% or more of the unit's max. current was given continuously for 1 second or longer. In a spindle system, current command of 95% or more of the motor's max. current was given continuously for 1 second or longer.

- Servo stop method: Deceleration stop enabled
- Spindle stop method: Deceleration stop enabled

0052 Excessive error 1

Details A position tracking error during servo ON was excessive.
- Servo stop method: Deceleration stop enabled

- Spindle stop method: Deceleration stop enabled

Servo/Spindle Alarms (S)

0053 Excessive error 2

A position tracking error during servo OFF was excessive Servo stop method: Dynamic stop

0054 Excessive error 3

Details There was no motor current feedback when the alarm "Excessive error 1" was detected

- Servo stop method: Dynamic stop
- Spindle stop method: Coast to a stop

0056 Com nanded speed error

Details In the C-axis control mode, excessive speed error was detected.
- Spindle stop method: Deceleration stop enabled

0058 Collision detection 1: G0

Details A disturbance torque exceeded the allowable value in rapid traverse modal (G0).

- Servo stop method: Maximum capacity deceleration stop

0059 Collision detection 1: G1

Details. A disturbance torque exceeded the allowable value in the cutting feed modal (G1).

Servo stop method: Maximum capacity deceleration stop

005A Collision detection 2

Details. A current command with the maximum drive unit current value was detected.

- Servo stop method: Maximum capacity deceleration stop

005B Sfty obsrvation: Cmd spd err

Details A commanded speed exceeding the safe speed was detected in the safety observation mode.

Servo stop method: Deceleration stop enabled - Spindle stop method: Deceleration stop enabled

005D Sfty obsrvation: Door stat err

Details The door state signal input in the NC does not coincide with the door state signal input in the drive unit in the safety observation mode. Otherwise, door open state was detected in normal mode.

- Servo stop method: Deceleration stop enabled
- Spindle stop method: Deceleration stop enabled

005E Sfty obsrvation: FB speed err

Details A motor speed exceeding the safe speed was detected in the safety observation mode.

Servo stop method: Deceleration stop enabled

Spindle stop method: Deceleration stop enabled

005F External contactor error

Details A contact of the external contactor is welding

 Servo stop method: Deceleration stop enabled Spindle stop method: Deceleration stop enabled

0080 Motor side dtc: cable err

Details The cable type of the motor side detector cable is for rectangular wave signal.

- Servo stop method: Initial error

0081 Machine side dtc: cable err

Details The cable type of the machine side detector cable does not coincide with the detector type

which is set by the parameter

- Servo stop method: Initial error

0087 Drive unit communication error

Details The communication frame between drive units was aborted

Servo stop method: Dynamic stop

- Spindle stop method: Coast to a stop

0088 Watchdog

Details The drive unit does not operate correctly.

- Servo stop method: Dynamic stop - Spindle stop method: Coast to a stop

Details A cooling fan built in the power supply unit stopped, and overheat occurred in the power mod-

- LED display: I

0073 Pw sply: Over regeneration

Details Over-regeneration detection level became over 100%. The regenerative resistor is overloaded. This alarm cannot be reset for 15 min from the occurrence to protect the regeneration resistor. Leave the drive system energized for more than 15 min, then turn the power ON to reset the alarm

- LED display: J

Servo/Spindle Alarms (S)

0075 Pw sply: Overvoltage

Details

L+ and L- bus voltage in main circuit exceeded the allowable value. As the voltage between L+ and L- is high immediately after this alarm, another alarm may occur if this alarm is reset in a short time. Wait more than 5 min before resetting so that the voltage drops.

- LED display: L

0076 Pw sply: Ext EMG stop set err

Details The rotary switch setting of external emergency stop is not correct, or a wrong external emergency stop signal is input.
- LED display: M

0077 Pw sply: Power module overheat

Details Thermal protection function in the power module has started its operation.

- LED display: n

Servo/Spindle Alarms (S)

3.2 Initial Parameter Errors (S02)

S02 Initial parameter error : PR 2201-2264 (Axis name)

The servo parameter setting data is illegal

The alarm No. is the No. of the servo parameter where the error occurred.

Remedy

Check the descriptions for the appropriate servo parameters and correct them.

S02 Initial parameter error : PR 2301 (Axis name)

Details The number of constants to be used in the following functions is too large:

Electronic gears

- Position loop gain

- Speed feedback conversion

Remedy

Check that all the related parameters are specified correctly. sv001:PC1, sv002:PC2, sv003:PGN1 sv018:PIT, sv019:RNG1, sv020:RNG2

S02 Initial parameter error : PR 2302 (Axis na

Details When high-speed serial incremental detector (OSE104, OSE105) is connected, parameters

for absolute position are set to ON. Set the parameters for absolute position detection to OFF.

To detect an absolute position, replace the incremental specification detector with an absolute

position detector.

Remedy Check that all the related parameters are specified correctly. sv017:SPEC, sv025:MTYP

S02 Initial parameter error : PR 2303 (Axis na

Details No servo option is found.

The closed loop (including the ball screw end detector) or dual feedback control is an optional function.

Remedy

Check that all the related parameters are specified correctly. sv025:MTYP/pen sv017:SPEC/dfbx

S02 Initial parameter error: PR 2304 (Axis r

Details No servo option is found.

The SHG control is an optional function Remedy

Check that all the related parameters are specified correctly. sv057:SHGC

sv058:SHGCsr

S02 Initial parameter error : PR 2305 (Axis nan

Details No servo option is found.

The adaptive filtering is an optional function.

Check that all the related parameters are specified correctly. sv027:SSF1/afl

S02 Initial parameter error: PR 13001-13256 (Axis name)

Details Parameter error

Remedy

The spindle parameter setting data is illegal

The alarm No. is the No. of the spindle parameter where the error occurred. Remedy

Check the descriptions for the appropriate spindle parameters and correct them. Refer to Alarm No.37 in Spindle Drive Maintenance Manual.

I Alarms Servo/Spindle Alarms (S)

3.3 Parameter Errors (S51)

S51 Parameter error 2201-2264 (Axis name)

Servo parameter setting data is illegal.

The alarm No. is the No. of the servo parameter where the warning occurred.

Remedy

Remedy

Check the descriptions for the appropriate servo parameters and correct them.

S51 Parameter error 13001-13256 (Axis name)

Details

Spindle parameter setting data is illegal.

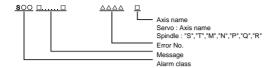

The alarm No. is the No. of the spindle parameter where the warning occurred.

Check the descriptions for the appropriate spindle parameters and correct them. Refer to Spindle Drive Maintenance Manual.

Servo/Spindle Alarms (S)

3.4 Servo Warnings (S52)

Servo warning is displayed in the following format.

Alarm class	Message
S52	Servo warning

Error No. consists of four digits (0096 to). Servo warnings are explained in ascending order of the error No. The four digits on the left part of each warning indicate the error No.

(Note) For the details of servo warnings, refer to your drive unit's instruction manual.

Drive unit warnings

0096 Scale feedback error

Details An excessive difference in feedback amount was detected between the main side detector and the MPI scale in MPI scale absolute position detection system.

- Reset method: Automatically reset once the cause of the warning is removed.

0097 Scale offset error

<u>Details</u> An error was detected in the offset data that is read at the NC power-ON in MPI scale absolute position detection system.

009B Detec cnv: Mag pole shift warn

Details The difference between the magnetic pole position after the phase Z has been passed (magnetic pole shift amounts: MO28) and the initially detected position is excessive in the built-in motor's incremental control system. The magnetic pole is controlled by the initial detection and

Reset method: Automatically reset once the cause of the warning is removed.

009E Abs pos dtc: Rev count error

Details An error was detected in the revolution counter data of the absolute position detector. The accuracy of absolute position is not quaranteed.

- Reset method: Automatically reset once the cause of the warning is removed.

009F Battery voltage drop

Details The battery voltage to be supplied to the absolute position detector is dropping.

Reset method: Automatically reset once the cause of the warning is removed.

00A3 DisCode ref chk: init s-up war

Details This warning is detected until the axis reaches the reference position during the initial setup of the distance-coded reference check function. This warning turns OFF after the axis has reached the position, thus set the value displayed on the drive monitor to the parameter.

- Reset method: Automatically reset once the cause of the warning is removed.

00A6 Fan stop warning

Details A cooling fan in the drive unit stopped.

- Reset method: Automatically reset once the cause of the warning is removed.

00E0 Over regeneration warning

Details Over-regeneration detection level exceeded 80%.

- Reset method: Automatically reset once the cause of the warning is removed.

00E1 Overload warning

Details A level of 80% of the Overload 1 alarm state was detected.

- Reset method: Automatically reset once the cause of the warning is removed.

00E4 Set parameter warning

Details An incorrect set value was detected among the parameters send from the NC in the normal operation.

- Reset method: Automatically reset once the cause of the warning is removed.

Servo/Spindle Alarms (S)

00E6 Control axis detach warning

- Details A control axis is being detached. (State display)
 - Reset method: Automatically reset once the cause of the warning is removed.

00E7 In NC emergency stop state

Details In NC emergency stop. (State display)
- Stop method: Deceleration stop enabled

- Reset method: Automatically reset once the cause of the warning is removed.

00E8-00EF Power supply warning

| Details | The power supply unit detected a warning. The error details are different according to the connected power supply unit.

Refer to "Power supply warning".

- Stop method: - (EA: Deceleration stop enabled)

- Reset method: Automatically reset once the cause of the warning is removed.

00EA In external EMG stop state

Details External emergency stop signal was input.
- Reset method: Automatically reset once the cause of the warning is removed.

- LED display: q

00EB Pw sply: Over regenerat warn

Details Over-regeneration detection level exceeded 80%.

Reset method: Automatically reset once the cause of the warning is removed.
 LED display: r

00EE Power supply: Fan stop warning

Details A cooling fan built in the power supply unit stopped.

- Reset method: Automatically reset once the cause of the warning is removed.

- LED display: u

4. MCP Alarms (Y)

Y02 System alm: Process time over 0050

Details System alarm: Process time is over

Remedy

The software or hardware may be damaged.

Contact the service center.
(Note) When two or more "Y02 System alarms" occur at the same time, only the alarm which has occurred first is displayed.

Y02 SV commu er: CRC error 1 0051 0000

Remedy

- Take measures against noise
 - Check for any failure of the communication cable connectors between controller and drive unit or between two drive units
 - Check for any failure of the communication cables between controller and drive unit or between two drive units.
 - A drive unit may be faulty. Take a note of the 7-segment LED contents of each drive unit and contact the Service Center.
 - Update the drive unit software version.

(Note) When two or more "Y02 System alarms" occur at the same time, only the alarm which has occurred first is displayed.

Details A communication error has occurred between controller and drive unit

- Remedy Take measures against noise
 - Check for any failure of the communication cable connectors between controller and drive unit or between two drive units
 - Check for any failure of the communication cables between controller and drive unit or between two drive units.
 - A drive unit may be faulty. Take a note of the 7-segment LED contents of each drive unit and contact the Service Center.
 - Update the drive unit software version

(Note) When two or more "Y02 System alarms" occur at the same time, only the alarm which has occurred first is displayed.

Y02 SV commu er: Recv timing err 0051 0002

Details, A communication error has occurred between controller and drive unit.

- Remedy Take measures against noise
 - Check for any failure of the communication cable connectors between controller and drive unit or between two drive units
 - Check for any failure of the communication cables between controller and drive unit or between two drive units.
 - A drive unit may be faulty. Take a note of the 7-segment LED contents of each drive unit and
 - contact the Service Center. Update the drive unit software version.
 - (Note) When two or more "Y02 System alarms" occur at the same time, only the alarm which has occurred first is displayed.

Y02 SV commu er: Data ID error 0051 xy03

Details. A communication error has occurred between controller and drive unit. x: Channel No. (0 to)

- y: Drive unit rotary switch No. (0 to)
- Remedy
 - Take measures against noise - Check for any failure of the communication cable connectors between controller and drive unit or between two drive units
 - Check for any failure of the communication cables between controller and drive unit or be-
 - tween two drive units.
 - A drive unit may be faulty. Take a note of the 7-segment LED contents of each drive unit and contact the Service Center

 - Update the drive unit software version

(Note) When two or more "Y02 System alarms" occur at the same time, only the alarm which has occurred first is displayed.

Y02 SV commu er: Recv frame No. 0051 xy04

- Details A communication error has occurred between controller and drive unit.
 - x: Channel No. (from 0)
 - y: Drive unit rotary switch No. (from 0)

Remedy

- Take measures against noise
- - Check for any failure of the communication cable connectors between controller and drive unit or between two drive units
 - Check for any failure of the communication cables between controller and drive unit or between two drive units.
 - A drive unit may be faulty. Take a note of the 7-segment LED contents of each drive unit and contact the Service Center.
 - Update the drive unit software version.

(Note) When two or more "Y02 System alarms" occur at the same time, only the alarm which has occurred first is displayed.

Y02 SV commu er: Commu error 0051 x005

Details

A communication error has occurred between controller and drive unit.

x: Channel No. (from 0)

Remedy

- Take measures against noise
 - Check for any failure of the communication cable connectors between controller and drive unit or between two drive units
 - Check for any failure of the communication cables between controller and drive unit or between two drive units.
 - A drive unit may be faulty. Take a note of the 7-segment LED contents of each drive unit and
 - contact the Service Center
 - Update the drive unit software version.
 (Note) When two or more "Y02 System alarms" occur at the same time, only the alarm which has occurred first is displayed.

Y02 SV commu er: Connect error 0051 x006

Details A communication error has occurred between controller and drive unit.

x: Channel No. (from 0)

Remedy

- Take measures against noise
- Check for any failure of the communication cable connectors between controller and drive unit or between two drive units
- Check for any failure of the communication cables between controller and drive unit or between two drive units.
- A drive unit may be faulty. Take a note of the 7-segment LED contents of each drive unit and contact the Service Center.
- Update the drive unit software version.

(Note) When two or more "Y02 System alarms" occur at the same time, only the alarm which has occurred first is displayed.

Y02 SV commu er : Init commu error 0051 xy20

Details. A communication error has occurred between controller and drive unit.

A drive unit stopped due to transition failure from initial communication to runtime. x: Channel No. (from 0)

- v: Drive unit rotary switch No. (from 0)

Remedy

- Take measures against noise
 - Check for any failure of the communication cable connectors between controller and drive unit or between two drive units
 - Check for any failure of the communication cables between controller and drive unit or between two drive units.
 - A drive unit may be faulty. Take a note of the 7-segment LED contents of each drive unit and contact the Service Center.
 - Update the drive unit software version.

(Note) When two or more "Y02 System alarms" occur at the same time, only the alarm which has occurred first is displayed.

Y02 SV commu er: Node detect error 0051 xy30

Details

A communication error has occurred between controller and drive unit.

- No response from drive unit to the request from NC when setting network configuration.
 - x: Channel No. (from 0) y: Station No. (from 0)
- Remedy
- Take measures against noise.
 Check for any failure of the communication cable connectors between controller and drive unit or between two drive units.
 - Check for any failure of the communication cables between controller and drive unit or between two drive units. - A drive unit may be faulty. Take a note of the 7-segment LED contents of each drive unit and
 - contact the Service Center.

 Update the drive unit software version.

(Note) When two or more "Y02 System alarms" occur at the same time, only the alarm which has occurred first is displayed.

Y02 SV commu er: Commu not support 0051 xy31

Details

A communication error has occurred between controller and drive unit.

Drive unit's software version doesn't support the communication mode that the controller requires

x: Channel No. (from 0)

y: Station No. (from 0)

Remedy

- Take measures against noise.

- Check for any failure of the communication cable connectors between controller and drive unit or between two drive units
- Check for any failure of the communication cables between controller and drive unit or between two drive units.
- A drive unit may be faulty. Take a note of the 7-segment LED contents of each drive unit and contact the Service Center.
- Undate the drive unit software version.

(Note) When two or more "Y02 System alarms" occur at the same time, only the alarm which has occurred first is displayed.

Y02 System alarm 0052 0001

Details Transfer to buffer is not properly done in servo communication.

Remedy

Software/ hardware may have a fault.

Contact service center.

(Note) When two or more "Y02 System alarms 0051" alarms occur at the same time, only the alarm which occurs first is displayed.

I Alarms MCP Alarms (Y)

Y03 Drive unit unequipped axis name

Details

The drive unit is not correctly connected.

Alphabet (axis name): Servo axis drive unit not mounted 1 to 4: PLC axis drive unit not mounted

S: No.1 spindle drive unit not mounted

T: No.2 spindle drive unit not mounted

M: No.3 spindle drive unit not mounted

N: No.4 spindle drive unit not mounted

Remedy

Check the drive unit mounting state.

- Check the end of the cable wiring.
- Check for any broken wires Check the connector insertion.
- The drive unit input power has not been ON.
- The drive unit axis No. switch is illegal.

Y05 Initial parameter error

Details Remedy

There is a problem in the value set for the number of axes or the number of part systems.

Correct the value set for the following corresponding parameters:

"#1001 SYS_ON (System validation setup)" "#1002 axisno (Number of axes)",

"#1039 spinno (Number of spindles)", etc.

Y06 mcp_no setting error 0001

Details Remedy

There is a skipped number in the channels

Check the values set for the following parameters. "#1021 mcp no (Drive unit I/F channel No. (servo))"

"#3031 smcp_no (Drive unit I/F channel No. (spindle))"

Y06 mcp_no setting error 0002

Details There is a duplicate setting for random layout.

Remedy

Check the values set for the following parameters

"#1021 mcp_no (Drive unit I/F channel No. (servo))"
"#3031 smcp_no (Drive unit I/F channel No. (spindle))"

Y06 mcp_no setting error 0003

Details. The drive unit fixed setting "0000" and random layout setting "**** are both set.

Remedy

Check the values set for the following parameters

"#1021 mcp_no (Drive unit I/F channel No. (servo))" "#3031 smcp no (Drive unit I/F channel No. (spindle))"

Y06 mcp_no setting error 0004

Details

The spindle/C axis "#1021 mcp_no (Drive unit I/F channel No. (servo))" and "#3031 smcp_no (Drive unit I/F channel No. (spindle))" are not set to the same values.

Remedy

Check the values set for the following parameters

"#1021 mcp_no (Drive unit I/F channel No. (servo)) "#3031 smcp_no (Drive unit I/F channel No. (spindle))"

Y06 mcp_no setting error 0005

Details, A random layout has been set while "#1154 pdoor" has been set to "1" in two-part system.

Remedy

Check the values set for the following parameters. "#1021 mcp_no (Drive unit I/F channel No. (servo))"

"#3031 smcp_no (Drive unit I/F channel No. (spindle))"

Y06 mcp_no setting error 0006

Details The channel No. parameter is not within the setting range.

Remedy

Check the values set for the following parameters

"#1021 mcp_no (Drive unit I/F channel No. (servo))" "#3031 smcp_no (Drive unit I/F channel No. (spindle))"

Y07 Too many axes connected 00xy

Details

The number of axes connected to each channel exceeds the maximum number of connectahla ayas

The exceeded number of axes per channel is displayed as alarm No. x: Exceeded number of axes at drive unit interface channel 2 (0 to F)

y: Exceeded number of axes at drive unit interface channel 1 (0 to F)

This alarm also occurs when the drive unit is connected only with the 2nd channel without connecting with the 1st channel.

Remedy

Remove connected axes from the channel whose alarm No. is other than '0' for the number displayed as the alarm No. Keep the number of connected axes to or less than the maximum that can be connected.

(Note 1) The number of axes is limited per each drive unit interface channel.

(Note 2)Maximum number of axes that can be connected differs depending on whether or not an expansion unit is available or the setting of '#11012 16 axes for 1ch (Connecting 16 axes for 1ch)

With the expansion unit, up to eight axes can be connected to a channel. Without the expansion unit, up to eight axes are allowed when '#11012 16 axes for 1ch (Connecting 16 axes for 1ch)' is set to '0', sixteen axes when set to '1'.

(Note 3) If this alarm occurs, the alarm 'Y03 Message: Drive unit unequipped' will not occur.

(Note 4) This alarm is displayed taking precedence over the alarm 'Y08 Too many drive units connected' and 'Y09 Too many axisno connected'.

Y08 Too many drive units connected 00xy

Details

The number of drive units connected to each channel exceeds 8.

The exceeded number of drive units per channel is displayed as alarm No. x: Exceeded number of drive units at drive unit interface channel 2 (0 to F) y: Exceeded number of drive units at drive unit interface channel 1 (0 to F)

Remedy

Remove drive units from the channel whose alarm No. is other than "0" for the number displayed as the alarm No. Keep the number of connected drive units to 8 or less.

(Note 1) The drive unit is not counted when all the axes connected to it are invalid.

(Note 2) If this alarm occurs, the alarm "Y03 Message: Drive unit unequipped" will not occur. (Note 3) The alarm "Y07 Too many axes connected" and "Y09 Too many axisno connected" are displayed taking precedence over this alarm.

Y09 Too many axisno connected 00xy

Details

The No. of the axis (drive unit's rotary switch No.) connected to each channel is bigger than the No. allowed

If the axis No. of each channel is bigger than the No. allowed, "1" is displayed for the alarm No. when the axis No. at drive unit interface channel 2 is too big

y: "1" when the axis No. at drive unit interface channel 1 is too big

Remedy

For the channel whose alarm No. is "1", keep the axis No. (drive unit's rotary switch No.) not bigger than the No. allowed

(Note 1) The axis No. is limited per each drive unit interface channel

(Note 2) The biggest allowed connected axis No. differs depending on whether or not an ex-pansion unit is available or the setting of "#11012 16 axes for 1ch (Connecting 16 axes for 1ch)". The biggest connectable axis No. is as shown below.

With the expansion unit, axes No. '0' to '7' can be connected.

Without the expansion unit, axes No. '0' to '7' are allowed when '#11012 16 axes for 1ch (Connecting 16 axes for 1ch)' is set to '0', axes No. '0' to 'F' when set to '1'.
(Note 3) If this alarm occurs, the alarm "Y03 Message: Drive unit unequipped" will not occur.

(Note 4) This alarm is displayed taking precedence over the alarm "Y08 Too many drive units

(Note 5) The alarm "Y07 Too many axes connected" is displayed taking precedence over this

Y11 Node Detect Err 8002-8300 xy00

Details

Drive unit does not respond to the request from NC when the NC is turned ON.

Error No. shows the No. of communication phase at which the response stopped.

x: Channel No. (0 or later)

v. Station No. with the error (0 or later)

Remedy

The communication error may be caused by the drive unit software version that does not correspond to the NC software version. Check the drive unit software version.

This alarm is canceled after the NC restarts.

When the alarm is not canceled, write down the alarm No. and contact service center.

Y12 No commu. with axis drv unit

Details

Although the high-speed synchronous tapping option is valid, the connected drive unit doesn't support the option

Remedy Replace the drive unit with that supports the option.

Y13 No commu. with sp drv unit

Details

Although the high-speed synchronous tapping option is valid, the connected drive unit doesn't support the option

Remedy Replace the drive unit with that supports the option.

Y14 Comm btwn drives not ready

Details Communication between drive units failed to be ready within a specified time.

Remedy - There may be a faulty connection of drive units.

- Check if any of drive units is broken.

Y20 Parameter compare error 0001 (Axis name)

Details The speed monitoring parameter in the NC does not correspond to the parameter transmitted to the drive unit.

The name of the axis with an error is displayed.

Remedy

The NC or the servo drive unit may be damaged.

Contact the service center

Y20 Sfty obsrvation: Cmd spd err 0002 (Axis name)

Details The speed exceeding the speed set with the parameter was commanded during the speed

monitoring mode. The name of the axis with an error is displayed

Remedy Check the speed monitoring parameter and the sequence program. Restart the NC

Y20 Sfty obsrvation: FB pos err 0003 (Axis name)

The commanded position, transmitted to the servo drive unit from NC, is totally different from Details the feedback position received from the servo drive unit during the speed monitoring mode. The name of the axis with an error is displayed.

Remedy

The NC or the servo drive unit may be damaged. Contact the service center.

Y20 Sfty obsrvation: FB speed err 0004 (Axis name)

Details Actual rotation speed of the motor is exceeding the speed that has been set with speed monitoring parameter during the speed monitoring mode

The name of the axis with an error is displayed.

Remedy Correct the speed observation parameter and the sequence program. Restart the NC.

Y20 Door signal: Input mismatch 0005 Door No.

Details Door state signals on the NC side and the drive side do not match. It may be caused by the followings

Cable disconnection

- Damaged door switch

- Damaged NC or servo drive unit

Remedy Check the cable.

Check the door switch. Restart the NC.

Y20 No speed observation mode in door open 0006 Door No.

Details The door open state was detected when the speed monitoring mode was invalid The causes may be same as the ones for 0005 (Door signal: Input mismatch). Also the sequence program may not be correct.

Remedy Correct the sequence program. Restart the NC.

Y20 Speed obsv: Para incompatible 0007 (Axis name)

Details Two speed monitoring parameters are not matched at the rising edge of the "speed monitor

Correct the relevant parameters so that the two speed monitoring parameters match.

mode" signal

The name of the axis with an error is displayed.

Restart the NC

Y20 Contactor welding detected 0008 Contactor No.

Details Contactor welding was detected.

Displays the bit corresponding to the No. of the abnormal contactor.

Some contactors take a while to be shutdown after the servo ready is turned OFF, and the servo ready was turned ON in the meantime.

- Make sure that contactor's auxiliary B contact signal is output correctly to the device set on "#1330 MC_dp1(Contactor weld detection device 1)" and "#1331 MC_dp2(Contactor weld Remedy

detection device 2)1

- If welding, replace the contactor.

- Restart the NC

Y20 No spec: Safety observation 0009

"#2313 SV113 SSF8/bitF (Servo function selection 8)" and "#13229 SP229 SFNC9/bitF (Spin-Details dle function 9)" are set for a system with no safety observation option.

Remedy

Remedy

Disable "#2313 SV113 SSF8/bitF (Servo function selection 8)" and "#13229 SP229 SFNC9/ bitF (Spindle function 9)" Then, restart the NC.

Y20 SDIO connector input volt err 0010

Details 24VDC power is not supplied to SDIO connector correctly. (SDIO 4A pin supply voltage was

dropped to 150 or supplied to 3010 conflector correctly. (SDID 4A pin supply Voltage was dropped to 15V or less, or 1ms or more instant power interrupt was detected.) In this case, "Pw sply:Inst pw interpt(DC24V)" alarm occurs because the contactor control output signal cannot be controlled.

This state remains until restarting the NC even if the cause of the alarm has been removed.

Remedy

Check the wiring. Supply 24VDC power to the SDIO connector.

Restart the NC

Y20 Device setting illegal 0011 Details

- The device set in "#1353 MC_ct1 (Contactor shutoff output 1 device)" does not exist.
 The device set in "#1353 MC_ct1 (Contactor shutoff output 1 device)" is used as an output device in PLC program
- Remedy - In "#1353 MC_ct1 (Contactor shutoff output 1 device)", set the device to which a remote I/
 - O is connected. Use the device to control the contactor.

 Confirm that the devices set by "#1353 MC_ct1 (Contactor shutoff output 1 device)" are not used as an output device in PLC program.

Y20 Contactor operation abnormal 0012 Contactor No.

Contactor's operation is not following the NC's commands. Details

Displays the No. of the abnormal contactor

Remedy - Check and correct "#1353 MC_ct1 (Contactor shutoff output 1 device)" setting.
- Check the wiring for contactor shutoff.

- Check for contactor's welding

Y20 Dual signal: parameter setting error 0027

Details A setting of #2118 SscDrSel, #3071 SscDrSelSp, #2180 S DIN, or #3140 S DINSp is not correct

- Correct the parameter setting.

Y20 Safety observation: parameter memory error 0031 (Parameter No.))

Details The following parameters are not consistent with the check data. #2180 S_DIN, #3140 S_DINSp

Remedy

Correct the parameter setting.
Restore the backup data, as the parameter or check data may be corrupted.

Y21 Speed obsv signal: Speed over 0001 (Axis na

Details The speed exceeds the safety speed limit when the "speed monitor mode" signal is ON.

The name of the axis with an error is displayed.

Remedy Decelerate the speed to reset the warning and start the speed monitor.

Y51 Parameter G0tL illegal 0001

Details. The time constant has not been set or exceeded the setting range.

Remedy Correct "#2004 G0tL (G0 time constant (linear))".

Y51 Parameter G1tL illegal 0002

Details. The time constant has not been set or exceeded the setting range.

Remedy Correct "#2007 G1tL (G1 time constant (linear))"

Y51 Parameter G0t1 illegal 0003

Details. The time constant has not been set or exceeded the setting range.

Remedy Correct "#2005 G0t1 (G0 time constant (primary delay) / Second-step time constant for soft acceleration/deceleration)"

Y51 Parameter G1t1 illegal 0004

Details The time constant has not been set or exceeded the setting range.

Remedy Correct "#2008 G1t1 (G1 time constant (primary delay)/Second-step time constant for soft acceleration/deceleration)"

Y51 Parameter grid space illegal 0009

Details The grid space is illegal.

Remedy Correct "#2029 grspc(Grid interval)".

Y51 Parameter stapt1-4 illegal 0012

Details The time constant has not been set or exceeded the setting range.

Remedy

Correct the parameters from "#3017 stapt1(Tap time constant (Gear: 00))" to "#3020 stapt4(Tap time constant (Gear: 11))".

I Alarms MCP Alarms (Y)

Y51 Slave axis No. illegal 0014

In the axis synchronization, parameter settings for slave axis have been attempted in different part system from that of master axis.

Remedy - Correct the "#1068 slavno (Slave axis number)" setting

Y51 Parameter skip_tL illegal 0015

Details The time constant has exceeded the setting range.

Remedy Correct "#2102 skip_tL (Skip time constant linear)".

Y51 Parameter skip_t1 illegal 0016

Details. The time constant has exceeded the setting range.

Remedy Correct "#2103 skip_t1 (Skip time constant primary delay / Second-step time constant for soft acceleration/deceleration)"

Y51 Parameter G0bdcc illegal 0017

Details "#1205 G0bdcc (Acceleration and deceleration before G0 interpolation)" for the 2nd part system is set to acceleration/deceleration before G0 interpolation

Remedy Correct "#1205 G0bdcc (Acceleration and deceleration before G0 interpolation)".

Y51 OMR-II parameter error 0018

Details An illegal setting was found in the OMR-II-related parameters. OMR-II has been disabled.

Remedy Correct the related parameter settings.

Y51 PLC indexing stroke length err 0019

Details "#12804 aux_tleng (Linear axis stroke length)" has not been set or exceeded the setting range while the linear axis equal indexing is enabled for the PLC indexing axis.

Remedy Correct "#12804 aux_tleng (Linear axis stroke length)".

Y51 No hi-accu acc/dec t-const ext 0020

Details There is no expansion option for the high-accuracy acceleration/deceleration time constant.

Remedy Set "#1207 G1btL (Time constant)" to a value within the setting range with no expansion specification for the extended high-accuracy time constant.

Y51 Values of PC1/PC2 too large 0101

Details. The PC1 and PC2 settings for the rotary axis are too large.

Correct "#2201 SV001 PC1 (Motor side gear ratio)" and "#2202 SV002 PC2 (Machine side

gear ratio)'

Remedy

Y90 No spindle signal 0001-0007

Details There is an error in the spindle encoder signal.

The data transmission to the drive unit is stopped when this error occurs

Remedy Check the spindle encoder's feedback cable and the encoder

5. System Alarms (Z)

Z02 System error

Details The operation result is illegal.

Remedy - Contact the service center.

Z31 Socket open error(socket) 0001

Details Socket open error (socket)

Remedy Set the parameter then turn the power OFF and ON again.

Z31 Socket bind error(bind) 0002

Details Socket bind error (bind)

Remedy Set the parameter then turn the power OFF and ON again.

Z31 Connection wait queue error(listen) 0003

Details Connection wait queue error (listen)

Remedy Set the parameter then turn the power OFF and ON again.

Z31 Connection request error(accept) 0004

Details Connection request error (accept)

Z31 Data recv error(socket error) 0005

Details Data receive error (socket error)

Z31 Data recv error(data error) 0006

Details Data receive error (data error)

Z31 Data send error(socket error) 0007

Details Data send error (socket error)

Z31 Data send error(data error) 0008

Details Data send error (data error)

Z31 Socket close error(close) 000A

Details Socket close error (close)

Remedy Set the parameter then turn the power OFF and ON again.

Z34 DeviceNet error

Details Any of the following errors has occurred in the DeviceNet unit.

 Master function error (X03 is ON) Slave function error (X08 is ON)

Message communication error (X05 is ON)

If the errors have occurred in more than one unit, the error No. of the unit with the smallest slot No. is displayed.

If the master function, slave function and message communication errors have occurred at the same time, the error is displayed in the following priority order.

1. Master function error

- 2. Slave function error
- 3. Message communication error

Remedy - Select the [Ext. PLC link control] menu on the maintenance screen to open the unit confirmation screen, and check the unit in error and details to cancel the error

For the details of the DeviceNet unit errors, refer to "External PLC Link II (Bus connection) MELSEC-Q Series Appendix 2 (DeviceNet) BNP-C3039-276 (Appendix 2).

Z40 Format mismatch

Details "#1052 MemVal (No. of common variables shared in part system designation)", formatted at "0", was set to "1

Remedy - Reset "#1052 MemVal (No. of common variables shared in part system designation)" to "0" or format and restart.

Z51 EEPROM ERROR

Details The data read from EEPROM does not coincide with the data that has been written into it.

Remedy - If the same alarm occurs with the same operation, a hardware fault may be the cause. Contact the service center.

System Alarms (Z)

Z52 Battery fault 000x

Details The voltage of the battery in the NC control unit has dropped. (The battery used to save the internal data.)

0001: Battery warning 0002: Battery detecting circuit error

0003: Battery alarm

(Note) The display of "Z52 battery fault 0001" can be removed by resetting. However, the warning state will not be cleared until the battery is replaced.

Remedy - Replace the battery of the NC control unit.

- Check for any disconnection of the battery cable.

After fixing the battery's fault, check the machining program.

Z53 CNC overheat

Details The controller or operation board temperature has risen above the designated value.

(Note)Temperature warning

When an overheat alarm is detected, the alarm is displayed and the overheat signal is output simultaneously. Automatic operation will be continued, while restarting after resetting or stopping with M02/M30 is not possible. (Restarting after block stop or feed hold is possible.)

The alarm will be cleared and the overheat signal will turn OFF when the temperature drops below the specified temperature.

Z53 CNC overheat 000x

[000x]

(For all models)

0001: The temperature in the control unit is high.

(For M700VS only) 0004: The temperature in the control unit is high. 0005: The temperature in the control unit 2 is high.

The ambient temperature must be lowered immediately when a "753 CNC overheat alarm occurs. However, if the machining needs to be continued, set "#6449/bit7 Control unit temperature alarm ON" to "0". Then the alarm will be invalidated.

Remedy - Cooling measures are required.
- Turn OFF the controller power, or lower the temperature with a cooler, etc.

Z55 RIO communication stop

Details An error occurs in the communication between the control unit and remote I/O unit.

Disconnection of a cable

Fault in remote I/O unit

Fault of power supply to remote I/O unit

The alarm and the I/O unit No. is displayed when an error occurs in the communication between the control unit and remote I/O unit

The remote I/O unit No. is displayed in eight digits. Two digits (in hexadecimal) are used for each board and part system

[Display format of remote I/O unit No.]

Z55 RIO communication stop

 $\overline{(a)}$ $\overline{(b)}$ $\overline{(c)}$ $\overline{(d)}\overline{(e)}$ $\overline{(f)}$ $\overline{(g)}$ $\overline{(h)}$

(a)(b): Remote I/O 2nd part system communication interrupted station

(c)(d): Remote I/O 1st part system communication interrupted station

(e)(f): Remote I/O 3rd part system communication interrupted station (g)(h): Board connection remote I/O communication interrupted station

(a)(b) indicates the following station in hexadecimal.

bit0: RIO (0th station) bit1: RIO (first station)

bit2: RIO (second station)

bit3: RIO (third station) bit4: RIO (fourth station)

hit5: RIO (fifth station)

bit6: RIO (sixth station)

bit7: RIO (seventh station)

This also applies for the remote I/O 1st part system communication interrupted station, remote I/O 3rd part system communication interrupted station and board connection remote I/O communication interrupted station.

Remedy - Check and replace the cables

Replace the remote I/O unit

- Check the power supply (existence of supply and voltage).

Z57 System warning

Program memory capacity has been set over the value that can be formatted.

An expansion device/expansion cassette has not mounted after formatting

The mounted expansion device/expansion cassette is different from the one that was mounted at formatting

Remedy Check the followings

Program memory capacity

- Mounting of an expansion device/expansion cassette

- API C release ontion

Z58 ROM write not completed

Details A machine tool builder macro program has not been written to FROM after being registered/ edited/ copied/ condensed/ merged/ the number changed/ deleted.

Remedy - Write the machine tool builder macro program to FROM.

The program does not need to be written to FROM unless the editing operations and so on need to be valid after the NC power OFF.

System Alarms (Z)

Z59 Acc/dec time cnst too large

Details Acceleration and deceleration time constants are too large

(This alarm is output at the same time as "T02 0206".)

- Set the larger value for "#1206 G1bF(Maximum speed)" Remedy

Set the smaller value for "#1207 G1btl (Time constant)"

- Set the lower feedrate.

Z60 Fieldbus communication error n1 n2 n3 n4

Details A communication error has occurred on the Fieldbus communication with HN571/HN573/ HN575.

[n1 :Shows state of the master channel (shown in hexadecimal number)]

00 :Offline In initializing

40 :Stop Cutting I/O communication

80 :Clear Resetting output data of each slave by sending 0 data.
C0 :In operation I/O In I/O communication

[n2 :Shows error state (shown in hexadecimal number)]

bit0 :Control error Parameter error

bit1 :Auto clear error Communication with all the slave channels was cut because a communication with one slave channel had an error.

bit2 :Non exchange error Slave channel with communication error is found. bit3 :Fatal error The communication cannot be continued because severe network failure exists

bit4: Event error Short-circuit was found on the network.
bit5: Not ready. CNC communication is not ready.
bit6: Time out error Time out was detected in communication with each channel.

bit7: Not used

[n3 :Shows error No. (shown in hexadecimal number)]

- Error in master channel (when remote address with an error is FF (hexadecimal number))

0 :No error Operating normally 32 :No USR_INT Damage in HN571. Replace HN571.

33 :No global data field

34 :No FDL-task

35 No Pl C-tack

37 :Master parameter incorrect

39 :Slave parameter incorrect 3C :Data offset exceeding allowable set value received. Check the configuration setting.

3D :Slave data send range overlap

3E :Slave data receive range overlap

3F :Not set data hand shake Damage in HN571. Replace HN571.

40 :RAM range exceeded

41 :Slave parameter data set illegal

CA :No segment

D4 :Data base read illegal Download the configuration data again.

D5 :Operating system illegal Damage in HN571. Replace HN571.

DC :Watch dog error DD :Hand shake mode No data communication by 0

DE :Master auto clear mode When setting auto clear mode, the auto clear mode was performed because one slave was not able to connect in run time - Error in slave channel (when remote address with an error is other than FF (hexadecimal

number)) Check the configuration of slave channel in which error has occurred. Check if there is any short-circuit in wire to bus

2 :Station overflow reported

3 :Station stopped responding to master command

9 :No slave required responding data

11 :No station respond

12 :No master to logical token ring 15 :Illegal parameter requested

In4: Shows slave No, where communication error has occurred (shown in hexadecimal number)1

neans an error in master channel.

Z64 Valid term soon to be expired xx

Details The valid term will be expired in less than a week, Remaining valid term is xx days.

Remedy - Obtain a decryption code by making a payment. Enter the decryption code.

Z65 Valid term has been expired

Details. The valid term has been expired with no decryption code input.

Remedy - Obtain a decryption code by making a payment. Enter the decryption code.

Z67 CC-Link communication error

Details. A communication error occurred during CC-Link communication using CC-Link unit.

Remedy - Refer to "List of Messages" in CC-Link (Master/Slave) Specification manual (BNP-C3039-214).

Z68 CC-Link unconnected

Details A cable between CC-Link unit and a device is disconnected or broken.

Remedy - Connect the cable.

- Check for any broken cables.

System Alarms (Z)

Z69 External link error 2

Details A FROM/TO instruction was used while the MELSEC-Q interface expansion module is not in stalled.

Remedy Install the MELSEC-Q interface expansion module.

Z69 External link error 3

Details A negative value was set for an I/O No. in the FROM/TO instruction.

Remedy Correct the I/O No.

Z69 External link error 4

Details A negative value was set for transfer size in the FROM/TO instruction.

Remedy Correct the transfer size.

Z69 External link error 5

Details. The number of FROM/TO instructions within one scan has exceeded 50

Remedy Correct the user PLC (ladder sequence) so that the number of FROM/TO instructions per scan is 50 or less.

Z69 External link error 6

Details The access to the buffer memory by the FROM/TO instruction has exceeded 12K words per scan.

Correct the user PLC (ladder sequence) so that the buffer memory access by the FROM/TO instruction won't exceed 12K words per scan. (The total size of FROM/TO is up to 12K words.)

Z69 External link error 7

Details A FROM/TO instruction was used in high-speed processing.

Remedy Delete the FROM/TO instruction from high-speed processing.

Z69 External link error 8

Details The bit device number designated in the FROM/TO instruction is not a multiple of 16.

Remedy Correct the bit device number designated in the FROM/TO instruction to be a multiple of 16.

Z69 External link error

Details With a FROM/TO instruction, a value out of the address range (negative value, or 0x8000 or over) was set as the head address of the buffer memory.

Correct the head address of the buffer memory.

Z69 External link error 10

Details An alarm occurred in the MELSEC module mounted on the extension base

Remedy
Check for any disconnection of the MELSEC module and the cables on the extension base.
Then turn the CNC's power ON again.

Z69 External link error 11

Details The I/O No. designated in the FROM/TO instruction is different from the mounted location of the intelligent function module on the extension base (the module's I/O No.).

Correct the I/O No. Then turn the CNC's power ON again.

Z82 3D machine interference/No machine model 0001

Details Machine model is not registered.

Remedy - Press RESET to cancel the alarm.

Movement can be resumed after the cancellation. However, the 3D machine interference check will become invalid.

- Inform the machine tool builder if an alarm occurs.

Z82 3D machine interference/Machine model illegal 0002

Details Machine model is illegal.

Remedy - Press RESET to cancel the alarm.

Movement can be resumed after the cancellation. However, the 3D machine interference check will become invalid.

- Inform the machine tool builder if an alarm occurs.

Z82 3D machine Interference check load excess 003

Details. The calculation of the interference check took time and caused a deceleration.

Remedy - Inform the machine tool builder

- Restart the axis in case of a manual operation.

 In case of an automatic operation, the operation will automatically resume when the processing load of the interference check decreases.

I Alarms

System Alarms (Z)

Z82 3D machine Interference check error 004

Details The interference check failed.

- Remedy Take a note of the failed status and contact the service center.
 - Press RESET to cancel the alarm. Invalidate the 3D machine interference check to continue the operation.

Z83 NC started during SP rotation 0001

Details The NC was started while the spindle was rotating.

Remedy Turn the power OFF and confirm that the spindle is not rotating, then turn the power ON again.

Absolute Position Detection System Alarms (Z7*)

Z70 Abs posn base set incomplete 0001 (Axis name)

Details Zero point initialization is incomplete. Otherwise, the spindle was removed.

Remedy

Complete zero point initialization. (Note) To release alarm "Z70 Abs data error", enter the parameter data output when establishing the absolute position and turn ON the power again. For the rotary axis, however, the alarm cannot be released by entering the parameter data.

- Zero point initialization: Required

Z70 Absolute position lost 0002 (Axis name)

Details Remedy

The absolute position basic point data saved in the NC has been damaged.

Set the parameters. If the basic point data is not restored by setting the parameters, perform zero point initialization.

(Note) To release alarm "Z70 Abs data error", enter the parameter data output when establishing the absolute position and turn ON the power again. For the rotary axis, however, the alarm cannot be released by entering the parameter data.

- Zero point initialization: (Required)

Z70 Abs posn param changed 0003 (Axis na

Details Any of the parameters for absolute position detection has been changed. #1003 junit

#1016 jout

#1017 rot

#1018 ccv #1040 M inch

#2049 type

Remedy

Correct the parameter settings. Then turn the power ON again and perform zero point initialization

(Note) To release alarm "Z70 Abs data error", enter the parameter data output when establishing the absolute position and turn ON the power again. For the rotary axis, however, the al arm cannot be released by entering the parameter data

Zero point initialization: Required

Z70 Abs posn initial set illegal 0004 (Axis name)

Details. The zero point initialization point is not at the grid position.

Remedy

Perform the zero point initialization again.

(Note) To release alarm "Z70 Abs data error", enter the parameter data output when estabishing the absolute position and turn ON the power again. For the rotary axis, however, the alarm cannot be released by entering the parameter data.

- Zero point initialization: Required

Z70 Abs posn param restored 0005 (Axis name)

Details. The data has been restored by inputting the parameters during the alarm No.0002.

Remedy

Turn the power ON again to start the operation.
(Note) To release alarm "Z70 Abs data error", enter the parameter data output when establishing the absolute position and turn ON the power again. For the rotary axis, however, the alarm cannot be released by entering the parameter data.

- Zero point initialization: Not required

Z70 Abs data error 0006

Details Deviation of the servo axis with scale when the power is OFF exceeds the set value in "#2051 check (Check)"

Remedy

Search for the factor which led the deviation of the servo axis at the power OFF. - Zero point initialization: Not required

Alarm reset when power is turned OFF: -

- Servo alarm No .:

Z70 Abs posn data lost 0080 (Axis name)

Details The absolute position data has been lost. An error of the multi-rotation counter data in the detector and so on may be the cause.

Remedy

Replace the detector and complete zero point initialization.
(Note) To release alarm "Z70 Abs data error", enter the parameter data output when estab-

lishing the absolute position and turn ON the power again. For the rotary axis, however, the alarm cannot be released by entering the parameter data.

- Zero point initialization: Required

- Servo alarm No : (9F)etc

Z70 Abs posn error(servo alm 25) 0101 (Axis name)

Details The servo alarm No. 25 was displayed and the power was turned ON again.

Remedy

Perform zero point initialization again.

(Note) To release alarm "Z70 Abs data error", enter the parameter data output when establishing the absolute position and turn ON the power again. For the rotary axis, however, the alarm cannot be released by entering the parameter data.

- Zero point initialization: Required
- Servo alarm No.: -25

Z70 Abs posn error(servo alm E3) 0106 (Axis name)

Details The servo alarm No. E3 was displayed and the power was turned ON again.

Perform zero point initialization again.

Remedy

(Note) To release alarm "Z70 Abs data error", enter the parameter data output when establishing the absolute position and turn ON the power again. For the rotary axis, however, the alarm cannot be released by entering the parameter data.

- Zero point initialization: Required
- Servo alarm No.: (E3)

Z71 AbsEncoder:Backup voltage drop 0001 (Axis name)

Details Backup voltage in the absolute position detector dropped

Remedy

Replace the battery, check the cable connections, and check the detector. Turn the power ON again and perform zero point initialization.

- Zero point initialization: Required
- Alarm reset when power is turned OFF: -(Z70-0101 is displayed after the power is turned
- ON again.)
- Servo alarm No.: 25

Z71 AbsEncoder: Commu error 0003 (Axis name)

Details Communication with the absolute position detector has been disabled.

Remedy

Check and replace the cables, card or detector. Turn the power ON again and perform zero point initialization.

- Zero point initialization: (Required) only when the detector has been replaced.
 Alarm reset when power is turned OFF: Reset
- Servo alarm No.: 91

Z71 AbsEncoder: Abs data changed 0004 (Axis na

Details. Absolute position data has been changed at the absolute position establishment

Remedy

Check and replace the cables, card or detector. Turn the power ON again and perform zero point initialization.

- Zero point initialization: (Required) only when the detector has been replaced.
 Alam reset when power is turned OFF: Reset
 Servo alam No.: 93

Z71 AbsEncoder: Serial data error 0005 (Axis name)

Details. An error of the serial data was found in the absolute position detector. Remedy

Check and replace the cables, card or detector. Turn the power ON again and perform zero point initialization

- Zero point initialization: (Required) only when the detector has been replaced.
 Alarm reset when power is turned OFF: Reset
- Servo alarm No · 92

Z71 AbsEncoder: Abs/inc posn diffr 0006 (Axis name)

Servo alarm E3

Absolute position counter warning Remedy

Operation is possible until the power is turned OFF.

- Zero point initialization: (Required) after the power is turned ON again.
- Alarm reset when power is turned OFF: Reset (Z70-0106 is displayed after the power is turned ON again.)
 - Servo alarm No.: E3

Z71 AbsEncoder: Initial commu er 0007 (Axis name)

Details

Initial communication with the absolute position detector is not possible

Remedy

Check and replace the cables, card or detector. Turn the power ON again and perform zero point initialization.

- Zero point initialization: (Required) only when the detector has been replaced. Alarm reset when power is turned OFF: Reset
- Servo alarm No · 18

Z72 Message: Position check error (Axis name)

Details

An error is detected at the comparison of detector's absolute position and controller coordinate values in the absolute position detection system.

Remedy

Z73 Battery for abs data fault 0001

Details

Low backup battery Servo alarm 9F

Low battery voltage

Remedy

This is displayed when the battery voltage is0 low or the cable has been damaged.

The absolute position initialization is not required

(Note) When this alarm has occurred, do not turn OFF the drive unit power in order to protect the absolute position data. Replace the battery with the drive unit power ON.

7. Distance-coded Reference Scale Errors (Z8*)

Z80 Basic position lost 0001

Details. The basic point data saved in the NC has been damaged.

Remedy - Set the parameters. If the basic point data is not restored by setting the parameters, perform zero point initialization.

Z80 Basic position restore 0002

Details The basic point data has been restored by setting the parameters.

Remedy - Turn the power ON again to start the operation.

Z80 No spec: Distance-coded scale 0003

Details The distance-coded reference scale has been set available although this function is out of the specifications.

Remedy - Check the specifications.

- If you do not use this function, correct the detector type with the servo parameter.

Z81 R-pos adjustment data lost 0001

Details Reference position adjustment value data saved in the NC has been damaged.

Remedy - Set the parameter. If the data is not restored by setting the parameter, establish the reference position again.

Z81 R-pos adjustment data restored 0002

Details After the 'Z81 R-pos adjustment data lost 0001', the data has been recovered by setting the parameter.

Remedy - Establish the reference position to start the operation.

8. Emergency Stop Alarms (EMG)

EMG Emergency stop PLC

Details. The user PLC has entered the emergency stop state during the sequence process.

Remedy - Investigate and remove the cause of the user PLC emergency stop.

EMG Emergency stop EXIN

Details The "emergency stop" signal is significant (open).

- Cancel the "emergency stop" signal.

- Check for any broken wires

EMG Emergency stop SRV

Details An alarm occurred in the servo system causing an emergency stop.

Remedy - Investigate and remove the cause of the servo alarm.

EMG Emergency stop STOP

Details The user PLC (ladder sequence) is not running.

- Check the setting of the control unit rotary switch CS2. Correct it if set to "1"

Check the [RUN/SP] (run/stop) switch on the PLC edit file save screen (onboard function). Turn it OFF if ON.

EMG Emergency stop SPIN

Details Spindle drive unit is not mounted.

Remedy

- Cancel the causes of the other emergency stop.
- Check the "emergency stop" signal input in the spindle drive unit.

EMG Emergency stop PC_H

Details Failure in the high-speed PC processing abnormal

Remedy - Correct the sequence program. (To stop monitoring the high-speed PC processing temporarily, set "1" in "#1219 aux03/bit1 (Stop high-speed PC monitoring function)". Disable the monitoring function only as a temporary measure.)

EMG Emergency stop PARA

Setting of the door open II fixed device is illegal.

Setting of the parameters for dog signal random assignment is illegal.

Remedy - Correct the "#1155 DOOR_m" and "#1156 DOOR_s" settings. (When the door open II fixed device is not used, set "#1155 DOOR_m" and "#1156 DOOR_s" to "100".)

Correct the "#2073 zm_dog (Origin dog Random assignment device)", "#2074 H/W_OT+ (H/W OT+ Random assignment device)", "#2075 H/W OT- (H/W OT- Random assignment device)", "#20 vice)" and "#1226 aux10/bit5 (Arbitrary allocation of dog signal)" settings.

EMG Emergency stop LINK

Details An emergency stop occurs when the FROM/TO instruction is not executed within 500ms.

Remedy - Execute the FROM/TO instruction one or more times every 500ms.

The time in which no interrupt request is issued from MELSEC is measured and stored in the following R registers:

R10190: Current timeout counter

R10191: Maximum timeout counter after power ON

R10192: Maximum timeout counter after system is started up (this is backed up)

Details MELSEC is in error and reset states.

Remedy - Check the MELSEC states.

Details. The contents of MELSEC-specific code area in buffer memory have been damaged.

Remedy - Check the MELSEC states.

Details PLC serial link communication has stopped.

(Note) When "WAIT" is entered in the PLC serial link, only the preparation sequence has been established before the communication stops. It is supposed that the settings of the serial link parameters "#1902 Din size" and "#1903 Dout size" are incorrect or the "#1909 Tout (ini)" set-time is too short in basic specification parameters.

- Check the CC-Link card wiring and the external sequencer transmission Remedy

- Check the link communication errors shown on the diagnostic screen
- Correct the settings of the serial link parameters in basic specification parameters.

EMG Emergency stop WAIT

The preparation sequence is not sent from the master station. Otherwise, the contents of the Details received preparation sequence are inconsistent with those of the parameters, so that the usual sequence cannot be started.

(Note) When "LINK" is also entered for the PLC serial link, refer to "Note" in the section, "LINK".

Remedy - Check that the CC-Link card switch setting and wiring as well as the external sequencer transmission are normal.

- Check the diagnostic screen for link communication errors.

I Alarms

Emergency Stop Alarms (EMG)

EMG Emergency stop XTEN

The CC-Link card is operating incorrectly. Details

Switch/parameter settings for the CC-Link card are incorrect.

- Replace the CC-Link card. Remedy

- Correct the switch/parameter settings for the CC-Link card.

EMG Emergency stop LAD

Details. The sequence program has an illegal code.

Remedy - Correct any illegal device Nos. or constants in the sequence program.

EMG Emergency stop CVIN

Details The "emergency stop" signal for power supply is significant (open) because the external emergency stop function for power supply is enabled.

Remedy - Cancel the "emergency stop" signal.

- Check for any broken wires.

EMG Emergency stop MCT

Details The contactor shutoff test is being executed.

Remedy

- The emergency stop is reset automatically after the contactor shutoff is confirmed.
 If the contactor shutoff is not confirmed within 5 seconds after the "contactor shutoff test" signal has been input, the "contactor welding detected" alarm occurs and the emergency stop status remains
- Make sure that the contactor's auxiliary B contact signal is correctly output to the device that is set in "#1330 MC dp1" and "#1331 MC dp2" (Contactor weld detection device 1 and 2), and then turn the power ON again.

EMG Emergency stop IPWD

Details The data backup for power failure might not have been executed successfully at the previous power failure.

Remedy - If this message appears frequently, the power supply may be deteriorated. Contact the service center.

EMG Emergency stop SUIN

Details The emergency stop input signal (M0) is OFF in the NC/PLC safety circuit.

Remedy - Check the conditions for turning ON the emergency stop input signal.

- Check for any broken wires.

EMG Emergency stop STP2

Details Sequence programs stopped in CNC.

Remedy - Correct the rotary switch 1 (on the right) of the control unit if set to "1".

EMG Emergency stop MULT

Details An error related to Q bus or Qr bus occurred.

Remedy - Refer to the error No. that follows the message "A01 Multi CPU error" to take a remedy.

EMG Emergency stop LINE

Details An error was detected when communicating with the drive unit.

Remedy - Check the wiring

9. Auxiliary Axis Alarms

9.1 Auxiliary Axis Servo Errors/Warnings (S)

S01 Aux ax PCB err (Drive circuit) 0011 (Axis No. 1 to 4)

Details An error occurred in the drive unit's internal PCB.

Remedy - Replace servo drive unit.

S01 Aux ax S/W processing error 0013 (Axis No. 1 to 4)

Details An error occurred in the drive unit's internal reference clock.

Remedy - Replace servo drive unit.

S01 Aux ax motor/detector type err 0016 (Axis No. 1 to 4)

Details Motor type error.

Remedy - Use a correct drive unit and motor combination.

Details Detector initial communication error.

Remedy - Connect correctly.

Replace the motor

- Replace or repair cable

Details Detector CPU error.

Remedy - Replace the motor (detector).

S01 Aux ax PCB error(A/D err) 0017 (Axis No. 1 to 4)

Details An error occurred in the drive unit's internal A/D converter.

Remedy - Replace servo drive unit

S01 Aux ax absolute posn lost 0025 (Axis No. 1 to 4)

Details An error occurred in the detector's internal absolute position data

Remedy - Turn the power ON for 2 to 3 minutes while the alarm is occurring, and then turn the power ON again

- Replace the battery, and initialize the absolute position again.

S01 Aux ax CRC error 0034 (Axis No. 1 to 4)

Details An error occurred in the communication with the NC.

Remedy - Take countermeasures against noise

S01 Aux ax communication timeout 0036 (Axis No. 1 to 4)

Details Communication with the NC was cut off.

Remedy - Connect correctly. - Turn the NC power ON.

- Replace the drive unit or NC.

S01 Aux ax parameter error 0037 (Axis No. 1 to 4)

Details The parameter setting value is incorrect.

Remedy - Set the parameter correctly

S01 Aux ax frame error 0038 (Axis No. 1 to 4)

Details An error occurred in the communication with the NC.

Remedy - Take countermeasures against noise

S01 Aux ax commu INFO error 0039 (Axis No. 1 to 4)

Details Undefined data was transferred from the NC.

Remedy - Change the NC software version to a compatible version.

S02 Aux ax PCB err (Drive circuit) 0011 (Axis No. 1 to 4)

Details An error occurred in the drive unit's internal PCB

Remedy - Replace servo drive unit.

S02 Aux ax S/W processing error 0013 (Axis No. 1 to 4)

Details. An error occurred in the drive unit's internal reference clock.

Remedy - Replace servo drive unit.

S02 Aux ax EEROM error 0015 (Axis No. 1 to 4)

Details A write error occurred to the EEROM in the drive unit.

Remedy - Replace servo drive unit.

S02 Aux ax PCB error(A/D err) 0017 (Axis No. 1 to 4)

Details An error occurred in the drive unit's internal A/D converter.

Remedy - Replace servo drive unit.

Auxiliary Axis Alarms

S02 Aux ax PCB error(LSI err) 0018 (Axis No. 1 to 4)

Details An error occurred in the drive unit's internal LSI

Remedy - Replace servo drive unit.

S02 Aux ax detector error 0020 (Axis No. 1 to 4)

Details. An error occurred in the communication between the servo drive unit and detector.

Remedy - Connect correctly.

- Replace or repair cable

S02 Aux ax ground fault detection 0024 (Axis No. 1 to 4)

Details. A ground fault of the output was detected when the power was turned ON.

Remedy - Repair the ground fault section.

Replace the cable or motor.

S03 Aux ax under voltage 0010 (Axis No. 1 to 4)

Details The power voltage is 160V or less.

Remedy - Review the power supply

- Replace the servo drive unit

S03 Aux ax regeneration error 0030 (Axis No. 1 to 4)

Details The tolerable regeneration power of the internal regenerative resistor or external regenerative option was exceeded.

Remedy - Set the parameter #50002 correctly.

Connect correctly.

Lower the positioning frequency.

- Change the regenerative option to a larger capacity.

Lower the load.

- Review the power supply.

Details Regenerative transistor error

Remedy - Replace the servo drive unit.

S03 Aux ax overspeed 0031 (Axis No. 1 to 4)

Details The motor's rotation speed exceeded the tolerable momentary speed

Remedy - Increase the acceleration/ deceleration time constant.

Review the gear ratio. - Replace the detector

S03 Aux ax overcurrent 0032 (Axis No. 1 to 4)

Details A current exceeding the servo drive unit's tolerable current flowed.

Remedy - Repair the wiring.

Replace the servo drive unit

- Take countermeasures against noise

S03 Aux ax overvoltage 0033 (Axis No. 1 to 4)

Details The voltage of the converter in the servo drive unit was 400V or more.

Remedy

- Wire correctly.

Replace the servo drive unit.

For the internal regenerative resistor, replace the drive unit.

- For the external regenerative option, replace the regenerative option.

S03 Aux ax motor overheating 0046 (Axis No. 1 to 4)

Details. An operation state causing the motor to overheat continued.

Remedy - Reduce the motor load

- Review the operation pattern

S03 Aux ax overload 1 0050 (Axis No. 1 to 4)

Details The servo drive unit or servomotor overload protection function activated.

Remedy - Reduce the motor load

Review the operation pattern.

Change to a motor or drive unit with large output.

Change the setting of the automatic tuning response characteristics.

Correct the connection

- Replace the servomotor.

S03 Aux ax overload 2 0051 (Axis No. 1 to 4)

Details The max. output current flowed for several seconds due to a machine collision or overload.

Remedy

- Review the operation pattern Change the setting of the automatic tuning response characteristics.

Correct the connection

- Replace the servomotor.

I Alarms Auxiliary Axis Alarms

S03 Aux ax excessive error 0052 (Axis No. 1 to 4)

Details A position deflection exceeding the excessive error detection setting value occurred.

Remedy

- Increase the acceleration/ deceleration time constant.
- Increase the torque limit value
 - Review the power facility capacity.
 Review the operation pattern.

 - Replace the servomotor.
 - Connect correctly.
 - Repair or replace the cable.

S52 Aux ax servo warning 0092 (Axis No. 1 to 4)

Details The absolute position detection battery voltage dropped.

Remedy - Mount a battery

- Replace the battery and initialize the absolute position.

S52 Aux ax servo warning 00E0 (Axis No. 1 to 4)

Details The regeneration power may have exceeded the tolerable range of the built-in regenerative resistor or external regenerative option.

- Remedy Lower the positioning frequency
 - Change the regenerative option to a larger one.
 - Lower the load.

S52 Aux ax servo warning 00E1 (Axis No. 1 to 4)

Details The overload alarm 1 could occur.

Remedy - Refer to the items for S03 0050

S52 Aux ax servo warning 00E3 (Axis No. 1 to 4)

Details There is an error in the absolute position detector internal data.

Remedy - Take countermeasures against noise.

- Replace the servomotor.

S52 Aux ax servo warning 00E9 (Axis No. 1 to 4)

Details The servo ON signal was input while the main circuit power was OFF.

The contactor operation is faulty. Remedy - Turn ON the main circuit power.

I Alarms Auxiliary Axis Alarms

9.2 Auxiliary Axis Absolute Position Detection System Alarms (Z)

Z70 Aux ax abs posn base set incomplete 0001 (Axis No. 1 to 4)

Details The zero point (reference point) has not been initialized in the absolute position system.

Remedy - Initialize the zero point (reference point).

Z70 Aux ax absolute position lost 0002 (Axis No. 1 to 4)

Details The absolute position coordinate data in the drive unit has been lost.

Remedy - Initialize the zero point (reference point).

Z70 Aux ax abs posn param changed 0003 (Axis No. 1 to 4)

Details. The absolute position system related parameters have been changed or lost.

Remedy - Correctly set the parameters and then initialize the zero point (reference point).

Z71 Aux ax abs encoder: back up voltage drop 0001 (Axis No. 1 to 4)

Details The data in the detector has been lost.

Battery voltage drop. Detector cable wire breakage or looseness.

Remedy - Check the battery and detector cable and then initialize the zero point (reference point).

Z73 Aux ax battery for abs data fault 0001 (Axis No. 1 to 4)

Details Battery voltage drop.

Detector cable wire breakage or looseness.

Remedy - Check the battery and detector cable. The zero point does not need to be initialized.

Z73 Aux ax absolute position counter warning 0003 (Axis No. 1 to 4)

Details An error occurred in the detector's absolute position counter.

Remedy - Replace the detector.

9.3 Auxiliary Axis Operation Errors (M)

M00 Aux ax dog overrun 0001 (Axis No. 1 to 4)

Details When executing dog-type reference position, the zero point return speed is too fast or the dog length is too short.

Remedy - Lower the zero point return speed or increase the dog length.

M00 Aux ax R-pnt direction illegal 0003 (Axis No. 1 to 4)

Details When executing reference position return, the axis was moved in the opposite of the designated direction

Remedy - Move the axis in the correct direction.

M00 Aux ax external interlock 0004 (Axis No. 1 to 4)

Details The axis interlock function is valid.

Remedy - Cancel the interlock signal

M00 Aux ax internal interlock 0005 (Axis No. 1 to 4)

Details An interlock was established by the servo OFF function.

Remedy - Cancel the servo OFF.

M00 Aux ax soft limit 0007 (Axis No. 1 to 4)

Details The soft limit was reached.

Remedy - Check the soft limit setting and machine position

M00 Aux ax R ret invld at abs alm 0024 (Axis No. 1 to 4)

Details, Reference position return was executed during an absolute position alarm.

Remedy - Initialize the absolute position reference point and then fix the absolute position coordinates.

M00 Aux ax R ret invld at ini 0025 (Axis No. 1 to 4)

Details Reference position return was executed while initializing the absolute position.

Remedy - Initialize the absolute position reference point and then fix the absolute position coordinates.

M01 Aux ax no operation mode 0101 (Axis No. 1 to 4)

Details The operation mode is not designated, or the operation mode was changed during axis movement.

Remedy - Correctly designate the operation mode.

M01 Aux ax feedrate 0 0103 (Axis No. 1 to 4)

Details The feedrate set in the operation parameter is zero, or the override value is zero while the override is enabled.

Remedy - Set a value other than zero in the feedrate setting or override value.

M01 Aux ax sta No. illegal 0160 (Axis No. 1 to 4)

Details A station No. exceeding the No. of indexed divisions was designated.

Remedy - Correctly designate the station No.

M01 Aux ax R-pnt ret incomplete 0161 (Axis No. 1 to 4)

<u>Details</u> Automatic/manual operation was started before reference position return was executed with the incremental system.

Remedy - Execute the reference position return

M01 Aux abs position initializing 0162 (Axis No. 1 to 4)

Details The start signal was input while initializing the absolute position reference point.

Remedy - Complete the absolute position reference point initialization.

M01 Aux ax abs position error 0163 (Axis No. 1 to 4)

Details The start signal was input during an absolute position alarm.

Remedy - Initialize the absolute position reference point and then fix the absolute position coordinates.

M01 Aux ax arbitrary positioning 0164 (Axis No. 1 to 4)

Details The manual operation mode was started during the random positioning mode.

Remedy - Turn the random positioning mode OFF before switching to the manual operation mode.

M01 Aux uneven index sta No. ilgl 0165 (Axis No. 1 to 4)

Details The commanded station No. was higher than 9 or the number of indexing stations during uneven indexing.

Remedy - Check the commanded station No. and the parameter "#50100 station" setting.

9.4 Auxiliary Axis MCP Alarms (Y)

Y02 Aux ax sys alm: Proc time over 0050 (Axis No. 1 to 4)

Details Aux ax sys alm: Proc time over

The software or hardware may be damaged.

Contact the service center.

Y02 Aux ax commu er:CRC error 1 0051 0000

Remedy

Details. Aux ax commu er: CRC error 1(10 times/910.2ms)

A communication error has occurred between the controller and drive unit. Take measures against noise

- Check that the communication cable connector between the controller and drive unit and one between the drive units are tight.
- Check whether the communication cable between the controller and drive unit and one between the drive units are disconnected.
- A driving drive unit may be faulty. Take a note of the 7-segment LED contents of each driving drive unit and report to the Service Center

Y02 Aux ax commu er:CRC error 2 0051 0001

Details Aux ax commu er: CRC error 2(2 continuous times)

Remedy

A communication error has occurred between the controller and drive unit.

- Take measures against noise.
 - Check that the communication cable connector between the controller and drive unit and one between the drive units are tight.
 - Check whether the communication cable between the controller and drive unit and one be-
 - tween the drive units are disconnected. A driving drive unit may be faulty. Take a note of the 7-segment LED contents of each driving drive unit and report to the Service Center.

Y02 Aux ax commu er:Recv timing 0051 0002

Details Aux ax commu er:Recv timing(2 continuous times)

Remedy

- A communication error has occurred between the controller and drive unit. Take measures against noise
- Check that the communication cable connector between the controller and drive unit and one between the drive units are tight.
- Check whether the communication cable between the controller and drive unit and one between the drive units are disconnected
- A driving drive unit may be faulty. Take a note of the 7-segment LED contents of each driving drive unit and report to the Service Center.

Y02 Aux ax commu er:Data ID 0051 xx03

Details

Aux ax commu er:Data ID(2 continuous times)

xx: Axis No.

Remedy

A communication error has occurred between the controller and drive unit.

- Take measures against noise.
- Check that the communication cable connector between the controller and drive unit and one between the drive units are tight. - Check whether the communication cable between the controller and drive unit and one be
 - tween the drive units are disconnected.
 - A driving drive unit may be faulty. Take a note of the 7-segment LED contents of each driving drive unit and report to the Service Center.

Y02 Aux ax commu er:Recv frame no. 0051 xx04

Details

Aux ax commu er: Recy frame no. (2 continuous times)

xx: Axis No.

Remedy

A communication error has occurred between the controller and drive unit.

- Take measures against noise.
- Check that the communication cable connector between the controller and drive unit and one between the drive units are tight. - Check whether the communication cable between the controller and drive unit and one be-
- tween the drive units are disconnected. - A driving drive unit may be faulty. Take a note of the 7-segment LED contents of each driving
- drive unit and report to the Service Center

Y03 Aux ax drive unit unequipped (Axis No. 1 to 4)

Details bit correspondence (bit 0: 1st axis bit 1: 2nd axis bit 2: 3rd axis bit 3: 4th axis)

Remedy Check the auxiliary axis drive unit mounting state.

- Check the end of the cable wiring.
- Check the cable for broken wires
- Check the connector insertion. The auxiliary axis drive unit input power is not being input.

The auxiliary axis drive unit axis No. switch is illegal.

10. Computer Link Errors (L)

L01 Serial port being used -2

Details Serial port has already been opened or cannot be used.

Remedy - Set the port not to shared by Anshin-net and so on.
- Correct the parameter settings for tape operation port.

L01 Timeout error -4

Details Communication ended with timeout.

(CNC has a 248-byte receive buffer. The time during which CNC receives 248 bytes exceeds the 'TIME-OUT' value set in the I/O device parameter.

Remedy

- Set a greater timeout value in the input/output device parameter.
 Check the software in HOST and make sure that the HOST transmits data in response to DC1(data request) from CNC

- Set '#9614 START CODE' to '0'

L01 Host ER signal OFF -10

Details ER signal in HOST (or DR signal in CNC) is not turned ON.

Remedy - Check for any disconnected cable.

- Check for any broke wire
- Make sure that the HOST power is turned ON.

L01 Parity H error -15

Details Communication ended with parity H.

Remedy - Check the software in HOST and make sure that the data to be transmitted to CNC is ISO code.

L01 Parity V error -16

Details Communication ended with parity V.

Remedy - Correct the data to transmit to CNC

L01 Overrun error -17

Details CNC received 10 bytes or more data from HOST in spite of DC3 (request to stop data transfer) transmission from CNC to the HOST, which terminated the communication. CNC received 10 bytes or more data from HOST during the data transmission from CNC to

the HOST

Remedy

- Check the software in HOST and make sure that the HOST stops transmitting data within 10 bytes after receiving DC3
- Correct the software in HOST not to transmit data such as a command or header to CNC during receiving a machining program.

11. User PLC Alarms (U)

U01 No user PLC - -

Details

PLC program is not input

(Note 1) The number of PLC program steps displayed on the screen may not match the actual number of error occurrence steps because of the PLC program timing. Use this as a guideline of the occurrence place.

(Note 2) Emergency stop (EMG) will be applied.

Remedy

Download the PLC program with the format selected by the PLC environment selection parameters (bit selection "#51/bit4").

U10 Illegal PLC 0x0010 -

Details

PLC scan time error

The scan time is 1 second or longer

(Note) The number of PLC program steps displayed on the screen may not match the actual number of error occurrence steps because of the PLC program timing. Use this as a guideline of the occurrence place.

Remedy Edit the PLC program to make the size smaller.

U10 Illegal PLC 0x0040 -

Details

PLC program operation mode illegal

The downloaded PLC program is compatible with the designated mode.

(Note 1) The number of PLC program steps displayed on the screen may not match the actual number of error occurrence steps because of the PLC program timing. Use this as a

guideline of the occurrence place.
(Note 2) Emergency stop (EMG) will be applied.

Remedy

Turn the power ON again or download the PLC program with the same format as at the power

U10 Illegal PLC 0x0080 -

Details

GPPW ladder code error

(Note 1) The number of PLC program steps displayed on the screen may not match the actual number of error occurrence steps because of the PLC program timing. Use this as a guideline of the occurrence place.

(Note 2) Emergency stop (EMG) will be applied.

Download the PLC program with a correct GPPW format.

U10 Illegal PLC 0x008x -

Details PLC4B ladder code error

An illegal circuit was found in the PLC4B ladder.

bit1: PC medium-speed circuit illegal

bit2: PC high-speed circuit illegal

(Note 1) The number of PLC program steps displayed on the screen may not match the actual number of error occurrence steps because of the PLC program timing. Use this as a guideline of the occurrence place.

(Note 2) Emergency stop (EMG) will be applied

Remedy

Download the correct PLC4B format PLC program.

U10 Illegal PLC 0x0400 Number of ladder steps

Details

Software illegal interrupt An abnormal stop occurred in the PLC program process due to an illegal code for software

command

(Note 1) The number of PLC program steps displayed on the screen may not match the actual number of error occurrence steps because of the PLC program timing. Use this as a guideline of the occurrence place.

(Note 2) Emergency stop (EMG) will be applied

Remedy

Turn the power ON again.

If the error is not reset, download the correct PLC program.

User PLC Alarms (U)

U10 Illegal PLC 0x800x Number of PLC program steps

Details Software exception

An abnormal stop occurred in PLC program process due to a bus error, etc.

bit0: BIN command operation error bit1: BCD command operation error

(Note) The number of PLC program steps displayed on the screen may not match the actual number of error occurrence steps because of the PLC program timing. Use this as a guideline of the occurrence place.

Remedy

Refer to the methods for using the BCD and BIN function commands.

Details Software exception

An abnormal stop occurred in PLC program process due to a bus error, etc.

bit6: CALL/CALLS/RET command error

(Note 1) The number of PLC program steps displayed on the screen may not match the actual number of error occurrence steps because of the PLC program timing. Use this as a guideline of the occurrence place.

(Note 2) Emergency stop (EMG) is applied for bit6/7.

Remedy

Turn the power ON again.

If the error is not reset, download the correct PLC program.

U50 PLC stopped

The PLC program is stopped.

(Note) The number of PLC program steps displayed on the screen may not match the actual number of error occurrence steps because of the PLC program timing. Use this as a guideline of the occurrence place.

Remedy Start the PLC program.

U55 PLC stopped / is not saved

The PLC program is stopped and not written into ROM. (Note) The number of PLC program steps displayed on the screen may not match the actual number of error occurrence steps because of the PLC program timing. Use this as a guideline of the occurrence place.

Remedy Write the PLC program into ROM

U60 Ladder is not saved

Details

The PLC program is not written into ROM.

(Note) The number of PLC program steps displayed on the screen may not match the actual number of error occurrence steps because of the PLC program timing. Use this as a quideline of the occurrence place

Remedy

Write the PLC program into ROM.

12. Network Service Errors (N)

N001 Modem initial error

Details An error occurred in the modem connection at the power ON

Remedy - Check the connection between the NC and modem, connection port and power supply to modem.

N002 Redial over

- The number of redials exceeded due to the dial transmission failure

Remedy - Wait a while, and then dial again.

N003 TEL unconnect

- The phone line is not connected

Remedy - Check for any disconnection in the modem's phone line.

N004 Net communication error

Details

- An error other than the above occurred during communication.

Remedy - Note down how the error occurred and contact the service center.

N005 Invalid net communication

Details

- The modem connection port is being used for another function such as input/output
- The modem connection port settings are incorrect.

Remedy - Stop using the modem connection port with the other function, and then turn the power ON

Correct the settings of the modem connection port.

N006 Received result of diagnosis

Details - A diagnosis data file has been received.

Remedy - Clear the message.

N007 Send data size over

Details

- A file larger than Anshin-net server capacity (64Kbyte) has been transmitted in machining data sharing.

Remedy - Reduce the size of machining program file so that it won't exceed the capacity of Anshin-net server

N008 No file on server

Details

- The file reception failed in machining data sharing because no file exists on Anshin-net serv-

Remedy - Confirm that a machining program file exists on Anshin-net server before receiving it.

N009 Password error

- The file reception failed in machining data sharing due to a wrong password.

Remedy - Input the password again.

N010 Customer number error

Details

- The file reception failed in machining data sharing due to a wrong customer number.

Remedy - Input the customer number again.

N011 Storage capacity over

Details - The file reception failed in machining data sharing because the size of the file to be received is bigger than free space in the NC

Remedy - Ensure sufficient free space in the NC.

N012 File deletion error

Details

- A file on Anshin-net server cannot be deleted in machining data sharing.

Remedy - Confirm that the file exists on Anshin-net server.

- Note down how the error occurred and contact the service center.

13. Program Errors (P)

P10 No. of simultaneous axes over

Details. The number of axis addresses commanded in a block is exceeds the specifications.

Remedy - Divide the alarm block command into two.

Check the specifications.

P11 Illegal axis address

Details The axis address commanded by the program does not match any of the ones set by the parameter

Remedy - Correct the axis names in the program.

P20 Division error

Details The issued axis command cannot be divided by the command unit.

Remedy - Correct the program.

P29 Not accept command

Details The command has been issued when it is impossible.

- The normal line control command (G40.1, G41.1, G42.1) has been issued during the modal in which the normal line control is not acceptable.
- The command has been issued during the modal in which the 2-part system synchronous thread cutting is not acceptable.

Remedy - Correct the program.

P30 Parity H error

Details The number of holes per character on the paper tape is even for EIA code and odd for ISO code.

Remedy - Check the paper tape

- Check the tape puncher and tape reader.

P31 Parity V error

Details The number of characters per block on the paper tape is odd.

Remedy - Make the number of characters per block on the paper tape even.

- Set the parameter parity V selection OFF.

P32 Illegal address

Details An address not listed in the specifications has been used.

Remedy - Correct the program address.
- Correct the parameter settings.

Check the specifications.

P33 Format error

Details The command format in the program is not correct.

Remedy - Correct the program.

P34 Illegal G code

Details The commanded G code is not in the specifications.

An illegal G code was commanded during the coordinate rotation command.

Remedy - Correct the G code address in the program.

Details G51.2 or G50.2 was commanded when "#1501 polyax (Rotational tool axis number)" was set to "0".

G51.2 or G50.2 was commanded when the tool axis was set to the linear axis ("#1017 rot (Rotational axis)" is set to"0").

Remedy - Correct the parameter settings.

P35 Setting value range over

Details The setting range for the addresses has been exceeded.

Remedy - Correct the program.

P36 Program end error

Details "EOR" has been read during tape and memory mode.

Remedy - Enter the M02 and M30 command at the end of the program.

- Enter the M99 command at the end of the subprogram.

P37 O, N number zero

Details "0" has been specified for program or sequence No.

Remedy - Designate program Nos. within a range from 1 to 99999999.

- Designate sequence Nos. within a range from 1 to 99999.

P38 No spec: Add. Op block skip

"/n" has been issued while the optional block skip addition is not in the specifications. Details

Remedy - Check the specifications.

P39 No specifications

Details

- A non-specified G code was commanded
- The selected operation mode is out of specifications.
- Remedy Check the specifications.

P45 G-CODE COMB.

Details

The combination of G codes in a block is inappropriate.

A part of unmodal G codes and modal G codes cannot be commanded in a same block.

Remedy

Correct the combination of G codes.

Separate the incompatible G codes into different blocks.

P48 Restart pos return incomplete

A travel command was issued before the execution of the block that had been restart-Details searched.

- Carry out program restart again. Travel command cannot be executed before the execution of the block that has been restartsearched.

P49 Invalid restart search

Details

Remedy

- Restart search was attempted for the 3-dimensional circular interpolation
- Restart search was attempted for the mixed control (cross axis control) command (G110)
- Restart search was attempted during the cylindrical interpolation, polar coordinate interpolation, or tool tip center control
- Restart search was attempted from a block (G68.2) during the inclined surface machining mode or from the inclined surface machining mode cancel command block (G69).

Remedy

- Correct the program. - Correct the restart search position

P50 No spec: Inch/Metric change

Inch/Metric changeover (G20/G21) command was issued while the function is out of specifi-Details cations

Remedy - Check the specifications

P60 Compensation length over

Details. The commanded movement distance is excessive (over 231).

Remedy - Correct the command range for the axis address.

P61 No spec: Unidirectional posit.

Details Unidirectional positioning (G60) was commanded while the function is out of specifications.

Remedy - Check the specifications.

P62 No F command

Details

- No feed rate command has been issued
- There is no F command in the cylindrical interpolation or polar coordinate interpolation immediately after the G95 mode is commanded.

- The default movement modal command at power ON is G01. This causes the machine to Remedy move without a G01 command if a movement command is issued in the program, and an alarm results. Use an F command to specify the feed rate.

- Specify F with a thread lead command

P63 No spec: High-speed machining

Details, High-speed machining cancel (G5P0) was commanded while the high-speed machining is out of specifications.

Remedy - Check the specifications.

P65 No spec: High speed mode 3

Details

Remedy - Check whether the specifications are provided for the high-speed mode III.

P70 Arc end point deviation large

Details

- There is an error in the arc start and end points as well as in the arc center
 - The difference of the involute curve through the start point and the end point is large.
 When arc was commanded, one of the two axes configuring the arc plane was a scaling valid
 - axis.

Remedy

- Correct the numerical values of the addresses that specify the start and end points, arc cen
 - ter as well as the radius in the program.

 Correct the "+" and "-" directions of the address numerical values.
 - Check for the scaling valid axis.

P71 Arc center error

Details An arc center cannot be obtained in R-specified circular interpolation. A curvature center of the involute curve cannot be obtained.

- Remedy Correct the numerical values of the addresses in the program.
 - Correct the start and end points if they are inside of the base circle for involute interpolation. When carrying out tool radius compensation, make sure that the start and end points after compensation will not be inside of the base circle for involute interpolation
 - Correct the start and end points if they are at an even distance from the center of the base circle for involute interpolation.

P72 No spec: Herical cutting

Details. A helical command has been issued though it is out of specifications.

Remedy

- Check whether the specifications are provided for the helical cutting.
 - An Axis 3 command has been issued by the circular interpolation command. If there is no helical specification, move the linear axis to the next block.

P73 No spec: Spiral cutting

Details. A spiral command was issued though it is out of specifications

- Remedy Issue the G02.1 and G03.1 commands for circular interpolation.
 - Check whether the specifications are provided for the spiral cutting.

P74 Can't calculate 3DIM arc

The 3-dimension circular cannot be obtained because the end block was not specified during Details 3-dimension circular interpolation supplementary modal

The 3-dimension circular cannot be obtained due to an interruption during 3-dimension circular interpolation supplementary modal.

Remedy - Correct the program.

P75 3DIM arc illegal

Details An illegal G code was issued during 3-dimension circular interpolation modal.

Otherwise, 3-dimension circular interpolation command was issued during a modal for which a 3-dimension circular interpolation command cannot be issued.

Remedy - Correct the program.

P76 No spec: 3DIM arc interpolat

Details G02.4/G03.4 was commanded though there is no 3-dimension circular interpolation specification

Remedy - Check the specifications.

P80 No spec: Hypoth ax interpolat

Details Hypothetical axis interpolation (G07) was commanded though it is out of specifications.

Remedy - Check the specifications.

P90 No spec: Thread cutting

Details A thread cutting command was issued though it is out of specifications.

Remedy - Check the specifications.

P91 No spec: Var lead threading

Details Variable lead thread cutting (G34) was commanded though it is out of specifications.

Remedy - Check the specifications.

P93 Illegal pitch vaule

Details. An illegal thread lead (thread pitch) was specified at the thread cutting command.

Remedy - Correct the thread lead for the thread cutting command.

P100 No spec: Cylindric interpolat

Details A cylindrical interpolation command was issued though it is out of specifications.

Remedy - Check the specifications.

P110 Plane select during figure rot

Details Plane selection (G17/G18/G19) was commanded during figure rotation.

Remedy - Correct the machining program.

P111 Plane selected while coord rot

Details Plane selection commands (G17, G18, G19) were issued during a coordinate rotation was being commanded.

Remedy - Always command coordinate rotation cancel after the coordinate rotation command, and then issue a plane selection command.

P112 Plane selected while R compen

Details

- Plane selection commands (G17, G18, G19) were issued while tool radius compensation (G41, G42) and nose R compensation (G41, G42, G46) commands were being issued.
- Plane selection commands were issued after completing nose R compensation commands when there were no further axis movement commands after G40, and compensation has not heen cancelled

Remedy - Issue plane selection commands after completing (axis movement commands issued after G40 cancel command) tool radius compensation and nose R compensation commands.

P113 Illegal plane select

Details. The circular command axis does not correspond to the selected plane.

Remedy - Select a correct plane before issuing a circular command.

P120 No spec: Feed per rotation

Details Feed per rotation (G95) was commanded though it is out of specifications.

Remedy - Check the specifications.

P121 F0 command during arc modal

Details F0 (F 1-digit feed) was commanded during the arc modal (G02/G03).

Remedy - Correct the machining program.

P122 No spec: Auto corner override

Details An auto corner override command (G62) was issued though it is out of specifications.

Remedy - Check the specifications

Delete the G62 command from the program.

P123 No spec: High-accuracy control

Details, High-accuracy control command was issued though it is out of specifications.

Remedy - Check the specifications.

P124 No spec: Inverse time feed

Details - The inverse time option is not provided.

Remedy - Check the specifications.

P125 G93 mode error

Details

- The issued G code command is illegal during G93 mode.
 - G93 command was issued during a modal for which inverse time feed cannot be performed.

Remedy - Correct the program

P126 Invalid cmnd in high-accuracy

An illegal command was issued during the high-accuracy control mode.

- A G code group 13 command was issued during the high-accuracy control mode.

 Milling, cylindrical interpolation or pole coordinate interpolation was commanded during the
- high-accuracy control mode.

Remedy - Correct the program.

P127 No spec: SSS Control

Details The SSS control valid parameter has been set although there is no SSS control specification.

Remedy - Check the specifications. Set "#8090 SSS ON" to "0" when there is no SSS control specification

P128 Machin condtn select I disable

Details Machining condition selection I was commanded during the mode where the selection command is unavailable

Remedy - Check the program and see whether any unavailable mode is included during machining condition selection I. If any, cancel that mode.

P130 2nd M function code illegal

Details The 2nd miscellaneous function address, commanded in the program, differs from the address set in the parameters.

Remedy - Correct the 2nd miscellaneous function address in the program.

P131 No spec: Cnst surface ctrl G96

Details A constant surface speed control command (G96) was issued though it is out of specifications.

Remedy - Check the specifications.

Issue a rotation speed command (G97) instead of the constant surface speed control command (G96).

P132 Spindle rotation speed S=0

Details No spindle rotation speed command has been issued

Remedy - Correct the program.

P133 Illegal P-No. G96

Details. The illegal No, was specified for the constant surface speed control axis.

Remedy - Correct the parameter settings and program that specify the constant surface speed control avis

P134 G96 Clamp Err.

The constant surface speed control command (G96) was issued without commanding the spindle speed clamp (G92/G50).

Remedy

Press the reset key and carry out the remedy below.

- Check the program.
 Issue the G92/G50 command before the G96 command.
- Command the constant surface speed cancel (G97) to switch to the rotation speed command

P140 No spec: Pos compen cmd

Details The position compensation command (G45 to G48) is out of specifications.

Remedy - Check the specifications.

P141 Pos compen during rotation

Details Position compensation was commanded during the figure rotation or coordinate rotation com-

Remedy - Correct the program.

P142 Pos compen invalid arc

Details Position compensation cannot be executed with the issued arc command.

Remedy - Correct the program

P150 No spec: Nose R compensation

Details

- Tool radius compensation commands (G41 and G42) were issued though they are out of specifications
 - Nose R compensation commands (G41, G42, and G46) were issued though they are out of specifications

Remedy - Check the specifications.

P151 Radius compen during arc mode

Details A compensation command (G40, G41, G42, G43, G44, or G46) has been issued in the arc modal (G02 or G03).

Remedy - Issue the linear command (G01) or rapid traverse command (G00) in the compensation command block or cancel block (Set the modal to linear interpolation.)

P152 No intersection

Details

- In interference block processing during execution of a tool radius compensation (G41 or G42) or nose R compensation (G41, G42, or G46) command, the intersection point after one block is skipped cannot be determined.
- The compensation amount cannot be calculated during the tool radius compensation for 5axis machining (G41.2,G42.2).

Remedy - Correct the program.

P153 Compensation interference

Details An interference error has occurred while the tool radius compensation command (G41 or G42) or nose R compensation command (G41, G42 or G46) was being executed.

Remedy - Correct the program.

P154 No spec: 3D compensation

Details A three-dimensional compensation command was issued though it is out of specifications.

Remedy - Check the specifications.

P155 Fixed cyc exec during compen

Details. A fixed cycle command has been issued in the radius compensation mode

Remedy - Issue a radius compensation cancel command (G40) to cancel the radius compensation mode that has been applied since the fixed cycle command was issued.

P156 R compen direction not defined

Details A shift vector with undefined compensation direction was found at the start of G46 nose R compensation.

Remedy - Change the vector to that which has the defined compensation direction.

- Change the tool to that which has a different tip point No.

P157 R compen direction changed

Details During G46 nose R compensation, the compensation direction is reversed

- Change the G command to that which allows the reversed compensation direction (G00, G28, G30, G33, or G53).
 - Change the tool to that which has a different tip point No. Enable "#8106 G46 NO REV-ERR".

P158 Illegal tip point

Details An illegal tip point No. (other than 1 to 8) was found during G46 nose R compensation.

Remedy - Correct the tip point No.

P159 C-CMP REMAINS

Details One of the followings was commanded while the compensation has not been canceled (the compensation amount remained).

- (1) Automatic tool nose R compensation (G143)
- (2) Radius compensation (G145)
- (3) Plane selection (G17 to G19)
- (4) Skip (G31 or G31.1/G31.2/G31.3) (5) Fixed cycle for drilling (G81 to G89)
- (6) Compound type fixed cycle II (G74 to G76)
- Remedy - Cancel the compensation (with compensation amount "0") before commanding - Command the G00 move block before the block with a command among (1) to (6).

P160 G53 CMP. ERR

Details

- G53 was commanded during nose R compensation (by G41/G42/G46).
- G53 was commanded to the block where the nose R compensation mode is changed (with G40/G41/G42/G46).
- G53 was commanded while nose R compensation amount has not been cleared
- Remedy
- Correct the program.
 When issuing G53 after G40 command, move the compensation plane axis by G00/G01/ G02/G03 command before issuing G53

P161 No spec: 5ax tool R compensate

Details. Tool radius compensation for 5-axis machining is not included in the specifications.

Remedy - Check the specifications.

P162 Disable Cmd in 5ax tool R comp

A command (G or T command, etc) was issued during tool radius compensation for 5-axis ma-Details chining, although it is disabled during the compensation.

- Cancel the tool radius compensation for 5-axis machining.

P163 5 ax tool R comp is disable

Details Tool radius compensation for 5-axis machining was commanded in a mode where the command is disabled

Remedy - Cancel the mode that disables the command.

P170 No offset numb

Details No compensation No. (DOO, TOO or HOO) command was given when the radius compensation (G41, G42, G43 or G46) command was issued. Otherwise, the compensation No. is larger than the number of sets in the specifications.

Remedy

Add the compensation No. command to the compensation command block.
 Check the number of sets for the tool compensation Nos. and correct the compensation No.

command to be within the number of sets.

P171 No spec:Comp input by prog G10

Details Compensation data input by program (G10) was commanded though it is out of specifications.

Remedy - Check the specifications

P172 G10 L number error

Details An address of G10 command is not correct.

Remedy - Correct the address L No. of the G10 command.

P173 G10 P number error

The compensation No. at the G10 command is not within the permitted number of sets in the Details specifications.

- Check the number of sets for the tool compensation Nos, and correct the address P design nation to be within the number of sets.

P174 No spec:Comp input by prog G11

Details Compensation data input by program cancel (G11) was commanded though there is no specification of compensation data input by program

Remedy - Check the specifications.

P177 Tool life count active

Details Registration of tool life management data with G10 was attempted when the "usage data count valid" signal was ON.

Remedy - The tool life management data cannot be registered during the usage data count. Turn the "usage data count valid" signal OFF.

P178 Tool life data entry over

Details. The number of registration groups, total number of registered tools or the number of registrations per group exceeded the range in the specifications.

Remedy - Correct the number of registrations.

P179 Illegal group No.

Details

- A duplicate group No. was found at the registration of the tool life management data with G10.
- A group No. that was not registered was designated during the T****99 command.
 An M code command, which must be issued as a single command, coexists in the same
- An M code command, which must be issued as a single command, coexists in block as that of another M code command.
- The M code commands set in the same group exist in the same block.
- Remedy Register the tool life data once for one group: commanding with a duplicate group No. is not allowed.
 - Correct to the group No.

P180 No spec: Drilling cycle

Details A fixed cycle command (G72 - G89) was issued though it is out of specifications.

Remedy - Check the specifications.

- Correct the program.

P181 No spindle command (Tap cycle)

Details Spindle rotation speed (S) has not been commanded in synchronous tapping.

Remed

- Command the spindle rotation speed (S) in synchronous tapping.
- When "#8125 Check Scode in G84" is set to "1", enter the S command in the same block where the synchronous tapping command is issued.

P182 Synchronous tap error

Details - Connection to the main spindle unit was not established.

- The synchronous tapping was attempted with the spindle not serially connected under the multiple-spindle control I.
- Remedy Check connection to the main spindle.
 - Check that the main spindle encoder exists.
 - Set 1 to the parameter #3024 (sout)

P183 No pitch/thread number

Details The pitch or number of threads has not been commanded in the tap cycle of a fixed cycle for drilling command.

Remedy - Specify the pitch data and the number of threads by F or E command.

P184 Pitch/thread number error

Details

- The pitch or the number of threads per inch is illegal in the tap cycle of the fixed cycle for drilling command.
- The pitch is too small for the spindle rotation speed.
- The thread number is too large for the spindle rotation speed.

Remedy - Correct the pitch or the number of threads per inch.

P185 No spec: Sync tapping cycle

Details Synchronous tapping cycle (G84/G74) was commanded though it is out of specifications.

Remedy - Check the specifications

P186 Illegal S cmnd in synchro tap

Details S command was issued during synchronous tapping modal.

Remedy - Cancel the synchronous tapping before issuing the S command.

P190 No spec: Turning cycle

Details A lathe cutting cycle command was issued though it is out of specifications.

Remedy - Check the specification

- Delete the lathe cutting cycle command.

P191 Taper length error

Details In the lathe cutting cycle, the specified length of taper section is illegal.

Remedy - Set the smaller radius value than the axis travel amount in the lathe cycle command.

P192 Chamfering error

Details Chamfering in the thread cutting cycle is illegal.

Remedy - Set a chamfering amount not exceeding the cycle.

P200 No spec: MRC cycle

Details The compound type fixed cycle for turning machining I (G70 to G73) was commanded though it is out of specifications

Remedy - Check the specifications.

P201 Program error (MRC)

Details

- The subprogram, called with a compound type fixed cycle for turning machining I command, has at least one of the following commands: reference position return command (G27, G28, G29, G30); thread cutting (G33, G34); fixed cycle skip-function (G31, G31.n).
 - An arc command was found in the first movement block of the finished shape program in compound type fixed cycle for turning machining I.

- Remedy Delete G27, G28, G29, G30, G31, G33, G34, and fixed cycle G codes from the subprogram called with the compound type fixed cycle for turning machining I commands (G70 to G73).
 - Delete G02 and G03 from the first movement block of the finished shape program in compound type fixed cycle for turning machining I.

P202 Block over (MRC)

Details. The number of blocks in the shape program of the compound type fixed cycle for turning machining I is over 50 or 200 (the maximum number differs according to the model)

Remedy - Set a 50/200 or less value for the number of blocks in the shape program called by the compound type fixed cycle for turning machining I commands (G70 to G73). (The maximum number differs according to the model).

P203 D cmnd figure error (MRC)

A proper shape will not obtained by executing the shape program for the compound type fixed cycle for turning machining I (G70 to G73).

Remedy

- Correct the shape program for the compound type fixed cycle for turning machining I (G70 to G73).

P204 E cmnd fixed cycle error

Details A command value of the compound type fixed cycle for turning machining (G70 to G76) is illegal.

Remedy

- Correct the command value of the compound type fixed cycle for turning machining (G70 to G76).

P210 No spec: Pattern cycle

A compound type fixed cycle for turning machining II (G74 to G76) command was commanded though it is out of specifications.

Remedy - Check the specifications.

P220 No spec: Special fixed cycle

Details. There are no special fixed cycle specifications.

Remedy - Check the specifications.

P221 No. of special fixed holes = 0

Details "0" has been specified for the number of holes in special fixed cycle mode.

Remedy - Correct the program.

P222 G36 angle error

Details A G36 command specifies "0" for angle intervals.

Remedy - Correct the program

P223 G12/G13 radius error

Details The radius value specified with a G12 or G13 command is below the compensation amount Remedy - Correct the program.

P224 No spec: Circular (G12/G13)

Details. There are no circular cutting specifications.

Remedy - Check the specifications.

P230 Subprogram nesting over

Details Over 8 times of subprogram calls have been done in succession from a subprogram.

A M198 command was found in the program in the data server.

The program in the IC card has been called more than once (the program in the IC card can be called only once during nested).

Remedy - Correct the program so that the number of subprogram calls does not exceed 8 times.

P231 No sequence No.

Details The sequence No., commanded at the return from the subprogram or by GOTO in the subprogram call, was not set.

Remedy - Specify the sequence Nos. in the call block of the subprogram.

P232 No program No.

Details

- The machining program has not been found when the machining program is called.

- The file name of the program registered in IC card is not corresponding to O No.

Remedy

- Enter the machining program
- Check the subprogram storage destination parameters.
- Ensure that the external device (including IC card) that contains the file is mounted.

P235 Program editing

Details Operation was attempted for the file under program editing.

Remedy - Execute the program again after completion of program editing.

P240 No spec: Variable commands

Details A variable command (with #) was issued though it is out of specifications.

Remedy - Check the specifications.

P241 No variable No.

Details The variable No. commanded is out of the range specified in the specifications.

Remedy - Check the specifications.

- Correct the program variable No.

P242 = not defined at vrble set

Details. The "=" sign has not been commanded when a variable is defined.

Remedy - Designate the "=" sign in the variable definition of the program.

P243 Can't use variables

Details An invalid variable has been specified in the left or right side of an operation expression.

Remedy - Correct the program.

P244 Invalid set date or time

Date or time was set earlier than current date or time in the system variables (#3011, #3012) when the credit system was valid.

Remedy - Date or time cannot be changed.

- Correct the program.

P250 No spec: Figure rotation

Details Figure rotation (M98 I_J_P_H_L_) was commanded though it is out of specifications.

Remedy - Check the specifications.

P251 Figure rotation overlapped

Details Figure rotation command was issued during figure rotation.

Remedy - Correct the program.

P252 Coord rotate in fig. rotation

Details, A coordinate rotation related command (G68, G69) was issued during figure rotation.

Remedy - Correct the program.

P260 No spec: Coordinates rotation

Details A coordinate rotation command was issued though it is out of specifications.

Remedy - Check the specifications.

P261 G code illegal (Coord rot)

Details Another G code or a T command has been issued in the block of coordinate rotation command.

Remedy - Correct the program.

P262 Illegal modal (Coord rot)

Details A coordinate rotation command has been issued during modal in which coordinate rotation is not allowed.

Remedy - Correct the program.

P270 No spec: User macro

Details A macro specification was commanded though it is out of specifications.

Remedy - Check the specifications.

P271 No spec: Macro interrupt

Details A macro interruption command has been issued though it is out of specifications.

Remedy - Check the specifications.

P272 NC and macro texts in a block

Details An executable statement and a macro statement exist together in the same block.

Remedy - Place the executable statement and macro statement in separate blocks in the program.

P273 Macro call nesting over

Details. The number of macro call nests exceeded the limit imposed by the specifications

Remedy - Correct the program so that the macro calls do not exceed the limit imposed by the specifications.

P275 Macro argument over

Details. The number of argument sets in the macro call argument type II has exceeded the limit.

Remedy - Correct the program.

P276 Illegal G67 command

Details A G67 command was issued though it was not during the G66 command modal.

Remedy - Correct the program.

Issue G66 command before G67 command, which is a call cancel command.

P277 Macro alarm message

Details, An alarm command has been issued in #3000.

Remedy - Refer to the operator messages on the diagnosis screen

Refer to the instruction manual issued by the machine tool builder.

P280 Brackets [] nesting over

Details Over five times have the parentheses "[" or "]" been used in a single block.

Remedy - Correct the program so that the number of "[" or "]" is five or less.

P281 Brackets [] not paired

Details A single block does not have the same number of commanded parentheses "[" as that of "]"

Remedy - Correct the program so that "[" and "]" parentheses are paired up properly.

P282 Calculation impossible

Details The arithmetic formula is incorrect.

Remedy - Correct the formula in the program.

P283 Divided by zero

Details The denominator of the division is zero.

Remedy - Correct the program so that the denominator for division in the formula is not zero.

P288 IF EXCESS

Details Over ten times of IF statement nesting have been done.

Remedy Correct the program so that the number of IF statement nesting does not exceed ten.

P289 IF-ENDIF MMC.

Remedy

Details An IF statement is not ended with ENDIF.

THEN/ELSE has been commanded while there is no IF command.

- Correct the program so that IF statements are ended with ENDIFs. - Put IF[condition] before THEN/ELSE command.

- Put IF[condition] before THEN/ELSE command

P290 IF sentence error

Details There is an error in the "IF[<conditional>]GOTO(" statement.

Remedy - Correct the program.

P291 WHILE sentence error

Details There is an error in the "WHILE[<conditional>]DO(-END(" statement.

Remedy - Correct the program.

P292 SETVN sentence error

Details There is an error in the "SETVN(" statement when the variable name setting was made.

Remedy - Correct the program.

- The number of characters in the variable name of the SETVN statement must be 7 or less.

P293 DO-END nesting over

Details The number of DO-END nesting levels in the "WHILE[<conditional>]DO(-END(" statement has exceeded 27.

Remedy - Correct the program so that the nesting levels of the DO-END statement does not exceed 27.

P294 DO and END not paired

Details The DOs and ENDs are not paired off properly.

Remedy - Correct the program so that the DOs and ENDs are paired off properly.

P295 WHILE/GOTO in tape

Details. There is a WHILE or GOTO statement on the tape during tape operation

Remedy - Apply memory mode operation instead of tape mode that does not allow the execution of the program with a WHILE or GOTO statement.

P296 No address (macro)

Details A required address has not been specified in the user macro.

Remedy - Correct the program.

P297 Address-A error

Details The user macro does not use address A as a variable.

Remedy - Correct the program.

P298 G200-G202 cmnd in tape

Details User macro G200, G201, or G202 was specified during tape or MDI mode.

Remedy - Correct the program.

P300 Variable name illegal

Details The variable names have not been commanded properly.

Remedy - Correct the variable names in the program.

P301 Variable name duplicated

Details A duplicate variable name was found.

Remedy - Correct the program so that no duplicate name exists.

P310 Not use GMSTB macro code

Details G, M, S, T, or B macro code was called during fixed cycle.

Remedy - Correct the program.

- Correct the parameter settings.

P350 No spec: Scaling command

Details The scaling command (G50, G51) was issued though it is out of specifications.

Remedy - Check the specifications.

P360 No spec: Program mirror

Details A mirror image (G50.1 or G51.1) command has been issued though the programmable mirror image specifications are not provided.

Remedy - Check the specifications.

P370 No spec: Facing t-post MR

Details The facing turret mirror image specifications are not provided.

Remedy - Check the specifications.

P371 Facing t-post MR illegal

Details

- Mirror image for facing tool posts was commanded to an axis in external mirror image or parameter mirror image.
- The commanded mirror image for facing tool posts enables the mirror image for a rotary axis.

Remedy - Correct the program.

- Correct the parameter settings.

P380 No spec: Corner R/C

Details. The corner R/C was issued though it is out of specifications.

Remedy - Check the specifications

- Delete the corner chamfering/corner rounding command in the program.

P381 No spec: Arc R/C

Details Corner chamfering II or corner rounding II was commanded in the arc interpolation block though it is out of specifications.

Remedy - Check the specifications.

P382 No corner movement

Details The block next to corner chamfering/ corner rounding is not a travel command.

Remedy - Replace the block succeeding the corner chamfering/ corner rounding command by G01 command.

P383 Corner movement short

Details The travel distance in the corner chamfering/corner rounding command was shorter than the value in the corner chamfering/corner rounding command.

Remedy - Set the smaller value for the corner chamfering/corner rounding than the travel distance.

P384 Corner next movement short

Details The travel distance in the following block in the corner chamfering/corner rounding command was shorter than the value in the corner chamfering/corner rounding command.

Remedy - Set the smaller value for the corner chamfering/corner rounding than the travel distance in the following block.

P385 Corner during G00/G33

Details A block with corner chamfering/corner rounding was given during G00 or G33 modal.

Remedy - Correct the program.

P390 No spec: Geometric

Details A geometric command was issued though it is out of specifications.

Remedy - Check the specifications.

P391 No spec: Geometric arc

Details There are no geometric IB specifications.

Remedy - Check the specifications.

P392 Angle < 1 degree (GEOMT)

Details The angular difference between the geometric line and line is 1° or less.

Remedy - Correct the geometric angle

P393 Inc value in 2nd block (GEOMT)

Details The second geometric block has a command with an incremental value.

Remedy - Issue a command with an absolute value in the second geometric block.

P394 No linear move command (GEOMT)

Details The second geometric block contains no linear command.

Remedy - Issue the G01 command.

P395 Illegal address (GEOMT)

Details The geometric format is invalid.

Remedy - Correct the program.

P396 Plane selected in GEOMT ctrl

Details A plane switching command was issued during geometric command processing.

Remedy - Complete the plane switching command before geometric command processing.

P397 Arc error (GEOMT)

Details In geometric IB, the circular arc end point does not contact or cross the next block start point.

Remedy - Correct the geometric circular arc command and the preceding and following commands.

P398 No spec: Geometric1B

Details A geometric command was issued though the geometric IB specifications are not provided.

Remedy - Check the specifications.

P411 Illegal modal G111

Details

- G111 was issued during milling mode
- G111 was issued during nose R compensation mode.
- G111 was issued during constant surface speed. G111 was issued during mixed control (cross axis control).
- G111 was issued during fixed cycle.
 - G111 was issued during polar coordinate interpolation.
 - G111 was issued during cylindrical interpolation mode.

Remedy - Before commanding G111, cancel the following commands.

- Milling mode Nose R compensation
- Constant surface speed
- Mixed control (cross axis control)
- Fixed cycle
- Polar coordinate interpolation Cylindrical interpolation

P412 No spec: Axis name switch

Details Axis name switch (G111) was issued though it is out of specifications.

Remedy - Check the specifications

P420 No spec: Para input by program

Details Parameter input by program (G10) was commanded though it is out of specifications.

Remedy - Check the specifications.

P421 Parameter input error

Details

- The specified parameter No. or set data is illegal
 - An illegal G command address was input in parameter input mode
 - A parameter input command was issued during fixed cycle modal or nose R compensation.
 - G10L50, G10L70, G11 were not commanded in independent blocks.

Remedy - Correct the program

P430 R-pnt return incomplete

Details

- A command was issued to move an axis, which has not returned to the reference position, away from that reference position
- A command was issued to an axis removal axis.

Remedy

- Execute reference position return manually
 - Disable the axis removal on the axis for which the command was issued.

P431 No spec: 2,3,4th R-point ret

Details A command for second, third or fourth reference position return was issued though there are no such command specifications.

Remedy - Check the specifications.

P432 No spec: Start position return

Details Start position return (G29) was commanded though it is out of specifications.

Remedy - Check the specifications.

P433 No spec: R-position check

Details Reference position check (G27) was commanded though it is out of specifications.

Remedy - Check the specifications.

P434 Compare error

One of the axes did not return to the reference position when the reference position check command (G27) was executed.

Remedy - Correct the program

P435 G27 and M commands in a block

Details An M command was issued simultaneously in the G27 command block.

Remedy - Place the M code command, which cannot be issued in a G27 command block, in separate block from G27 command block

P436 G29 and M commands in a block

Details. An M command was issued simultaneously in the G29 command block.

Remedy - Place the M code command, which cannot be issued in a G29 command block, in separate block from G29 command block

P438 G52 invalid during G54.1

Details A local coordinate system command was issued during execution of the G54.1 command.

Remedy - Correct the program.

P450 No spec: Chuck barrier

The chuck barrier on command (G22) was specified although the chuck barrier is out of spec-Details ifications

Remedy - Check the specifications

P451 No spec: Stroke chk bef travel

Details Stroke check before travel (G22/G23) was commanded though it is out of specifications.

Remedy - Check the specifications.

P452 Limit before travel exists

Details. An illegal command, which places the axis travel start/end point in the prohibited area or moves the axis through the prohibited area, was detected when Stroke check before travel (G22) was commanded

Remedy - Correct the coordinate values of the axis address commanded in the program.

P460 Tape I/O error

Details An error has occurred in the tape reader. Otherwise an error has occurred in the printer during macro printing

- Check the power and cable of the connected devices. Remedy

Correct the I/O device parameters.

P461 File I/O error

Details

- A file of the machining program cannot be read.
 IC card has not been inserted.

Remedy - In memory mode, the programs stored in memory may have been destroyed. Output all of

- the programs and tool data and then format the system.

 Ensure that the external device (including an IC card, etc) that contains the file is mounted.

 Correct the parameter settings for HD operation or IC card operation.

P462 Computer link commu error

Details A communication error occurred during the BTR operation.

Remedy - "L01 Computer link error" is displayed simultaneously. Take the remedy corresponding to the error No.

P480 No spec: Milli

- Milling was commanded though it is out of specifications
- Polar coordinate interpolation was commanded though it is out of specifications.

Remedy - Chack the specifications

P481 Illegal G code (mill)

Details

- An illegal G code was used during the milling mode.
 An illegal G code was used during cylindrical interpolation or polar coordinate interpolation.
- The G07.1 command was issued during the tool radius compensation.

Remedy - Correct the program.

P482 Illegal axis (mill)

Details

- A rotary axis was commanded during the milling mode
- Milling was executed though an illegal value was set for the milling axis No.
- Cylindrical interpolation or polar coordinate interpolation was commanded during mirror image. Cylindrical interpolation or polar coordinate interpolation was commanded before the tool
- compensation was completed after the T command. - G07.1 was commanded when cylindrical interpolation was not possible (there is no rotary
- axis, or external mirror image is ON).

 An axis other than a cylindrical coordinate system axis was commanded during cylindrical
- interpolation.

Remedy - Correct the machining program, parameters and PLC interface signals.

P484 R-pnt ret incomplete (mill)

Details

- Movement was commanded to an axis that had not completed reference position return during the milling mode
 - Movement was commanded to an axis that had not completed reference position return during cylindrical interpolation or polar coordinate interpolation.

Remedy - Carry out manual reference position return.

P485 Illegal modal (mill)

Details

- The milling mode was turned ON during nose R compensation or constant surface speed control.
 - A T command was issued during the milling mode.
- The mode was switched from milling to cutting during tool compensation.
- Cylindrical interpolation or polar coordinate interpolation was commanded during the constant surface speed control mode (G96).
- The command unacceptable in the cylindrical interpolation was issued.
- A T command was issued during the cylindrical interpolation or polar coordinate interpolation mode
- A movement command was issued when the plane was not selected just before or after the G07.1 command.
 - A plane selection command was issued during the polar coordinate interpolation mode.
- Cylindrical interpolation or polar coordinate interpolation was commanded during tool radius compensation.
- The G16 plane in which the radius value of a cylinder is "0" was specified.
- A cylindrical interpolation or polar coordinate interpolation command was issued during coordinate rotation by program.

Remedy

- Correct the program. Issue G40 or G97 before issuing G12.1
- Issue a T command before issuing G12.1.
- Issue G40 before issuing G13.1.
- Specify the radius value of a cylinder other than "0", or specify the X axis's current value other than "0" before issuing G12.1/G16.

P486 Milling error

Details

- The milling command was issued during the mirror image (when parameter or external input is turned ON).
- Polar coordinate interpolation, cylindrical interpolation or milling interpolation was commanded during mirror image for facing tool josts.
 The start command of the cylindrical interpolation or polar coordinate interpolation was is-
- sued during the normal line control.

Remedy - Correct the program.

P501 Cross (G110) impossible

Details

- Mixed control (cross axis control) command (G110) was issued in the following modes.
 - During nose R compensation mode
 During pole coordinate interpolation mode

 - During cylindrical interpolation mode
 - During balance cut mode
 - During fixed cycle machining mode
 - During facing turret mirror image During constant surface speed control mode
 - During hobbing mode
 - During axis name switch
- Remedy Correct the program.

P503 Illegal G110 axis

Details

- The commanded axis does not exist
- The mixed control (cross axis control) (G110) was commanded to the axis for which the mixed control (cross axis control) is disabled
 - The number of axes included in the mixed control (cross axis control) (G110) command is exceeding the maximum number of axes per part system.

Remedy - Correct the program.

P511 Synchronization M code error

Details

- Two or more synchronization M codes were commanded in the same block.
 The synchronization M code and "!" code were commanded in the same block
- Synchronization with the M code was commanded in 3rd part system or more, (Synchronization with the M code was commanded in 3rd part system or more, (Synchronization).
- zation with the M code is valid only in 1st part system or 2nd part system.)

Remedy - Correct the program

P520 Control axis superimposition/Designated axis illegal

Details

An axis which was impossible to superimpose was designated as a master axis or superimposing axis.

Remedy Correct the program.

P521 Illegal synchronization axis

The axis specified as a basic or synchronous axis of synchronization across part systems can-Details not be synchronized.

Remedy - Correct the program

P530 DEC. POINT ERR

A decimal point was added to the address where the decimal point command is not allowed. ("#1274 ext10/bit0 (Type of address enabling/disabling decimal point command)")

Do not add any decimal point to the addresses where the decimal point is not allowed.

P544 No spec: Wk instl err cmp

Details The workpiece installation error compensation function is out of the specifications.

Remedy - Check the specifications.

P545 Invld cmd in wk instl err cmp

During workpiece installation error compensation, a command impossible to issue (such as G command) was issued.

Check the program. If you wish to issue a command impossible to issue (such as G command) during workpiece installation error compensation, cancel workpiece installation error compensation once.

P546 Wk instl err cmp cmd invalid

Details

- Workpiece installation error compensation was commanded in a G modal in which commanding it is not allowed.
- An illegal G command was issued in the block that has a workpiece installation error compensation command.

Remedy - Check the program. Also check the G modals which were issued at commanding the work-piece installation error compensation, and cancel illegal ones.

- Issue the G command in a separate block.

P547 Illegal wk instl err cmp cmd

Details. A command in which the rotary axis's travel distance exceeds 180 degrees was issued.

Remedy - Divide the travel command so that the rotary axis's travel distance per block is less than 180 degrees.

P550 No spec: G06.2(NURBS)

Details There is no NURBS interpolation ontion

Remedy - Check the specifications.

P551 G06.2 knot error

Details The knot (k) command value is smaller than the value for the previous block.

Remedy - Correct the program.

- Specify the knot by monotone increment.

P552 Start point of 1st G06.2 err

Details The block end point immediately before the G06.2 command and the G06.2 first block command value do not match

Remedy - Match the G06.2 first block coordinate command value with the previous block end point.

P554 Invld manual interrupt in G6.2

Details Manual interruption was executed in a block that applies the G06.2 mode.

Remedy - Execute the manual interruption in the block that does not apply the G06.2 mode.

P555 Invalid restart during G06.2

Details Restart was attempted from the block that applies G06.2 mode.

Remedy - Restart from the block that does not apply the G06.2 mode.

P600 No spec: Auto TLM

Details An automatic tool length measurement command (G37) was issued though it is out of specifications.

Remedy - Check the specifications.

P601 No spec: Skip

Details A skip command (G31) was issued though it is out of specifications.

Remedy - Check the specifications.

P602 No spec: Multi skip

Details A multiple skip command (G31.1, G31.2, G31.3 or G31 Pn) was issued though it is out of specifications.

Remedy - Check the specifications.

P603 Skip speed 0

Details The skip speed is "0".

Remedy - Specify the skip speed.

P604 TLM illegal axis

Details No axis was specified in the automatic tool length measurement block. Otherwise, two or more axes were specified.

Remedy - Specify only one axis.

P605 T & TLM command in a block

Details The T code is in the same block as the automatic tool length measurement block.

Remedy - Specify the T code before the automatic tool length measurement block.

P606 T cmnd not found before TLM

Details. The T code was not yet specified in automatic tool length measurement.

Remedy - Specify the T code before the automatic tool length measurement block.

P607 TLM illegal signal

The measurement position arrival signal turned ON before the area specified by the D com-Details mand or "#8006 ZONE d". Otherwise, the signal remained OFF to the end.

Remedy - Correct the program.

P608 Skip during radius compen

Details. A skip command was issued during radius compensation processing.

Remedy - Issue a radius compensation cancel (G40) command or remove the skip command.

P610 Illegal parameter

Details

- The parameter setting is not correct.

- G114.1 was commanded while the spindle synchronization was selected with the PLC interface signal
- G113 was commanded while the spindle-spindle polygon machining option was OFF and the spindle synchronization was selected with the PLC interface signal. G110 was commanded while the mixed control (cross axis control) was selected with the
- PLC interface signal
- G125 was commanded while the control axis synchronization across part systems was selected with the PLC interface signal.

Remedy - Check whether the values are set in descending order (from the largest value) for "#1549

- Iv0vR1" to "#1553 Iv0vR5".
- Check whether the values are set in descending order for "#1554 Iv0rd2" to "#1557 Iv0rd5".
 Correct the settings of "#1514 expLinax (Exponential function interpolation linear axis)" and
- "#1515 expRotax (Exponential function interpolation rotary axis)".
- Correct the program.
 Correct the parameter settings.

P611 No spec: Exponential function

Details There is no specification for the exponential interpolation.

Remedy - Check the specifications.

P612 Exponential function error

A travel command for exponential interpolation was issued during mirror image for facing tool

Remedy - Correct the program.

P700 Illegal command value

Details. Spindle synchronization was commanded to a spindle that is not connected serially.

Remedy - Correct the program

Correct the parameter settings.

P900 No spec: Normal line control

Details A normal line control command (G40.1, G41.1, or G42.1) was issued though it is out of specifications

Remedy - Check the specifications.

P901 Normal line control axis G92

Details. A coordinate system preset command (G92) was issued to a normal line control axis during normal line control.

Remedy - Correct the program.

P902 Normal line control axis error

Details - The normal line control axis was set to a linear axis.

The normal line control axis was set to the linear type rotary axis II axis.

- The normal line control axis has not been set.

- The normal line control axis is the same as the plane selection axis.

Remedy - Correct the normal line control axis setting.

P903 Plane chg in Normal line ctrl

Details. The plane selection command (G17, G18, or G19) was issued during normal line control.

Remedy - Delete the plane selection command (G17, G18, or G19) from the program of the normal line control

P920 No spec: 3D coord conv

Details There is no specification for 3-dimensional coordinate conversion

Remedy - Check the specifications.

P921 Illegal G code at 3D coord

Details The commanded G code cannot be performed during 3-dimensional coordinate conversion modal.

Remedy - Refer to "MITSUBISHI CNC 700/70 Series Programming Manual (Machining Center System)" for usable G commands.

 When the basic specification parameter "#1229 set01/bit3 (Initial constant surface speed)" is enabled, disable the parameter or issue the constant surface speed control cancel (G97) command.

P922 Illegal mode at 3D coord

Details A 3-dimensional coordinate conversion command was issued during a modal for which 3-dimensional coordinate conversion cannot be performed.

Remedy - Refer to "MITSUBISHI CNC 700/70 Series Programming Manual (Machining Center System)" for usable G commands.

P923 Illegal addr in 3D coord blk

Details A G code and G68 was commanded in a block though the G code cannot be commanded with G68.

Remedy - Refer to "MITSUBISHI CNC 700/70 Series Programming Manual (Machining Center System)" for usable G commands.

P930 No spec: Tool axis compen

Details A tool length compensation along the tool axis command was issued though it is out of specifications.

Remedy - Check the specifications.

P931 Executing tool axis compen

Details There is a G code that cannot be commanded during tool length compensation along the tool axis

Remedy - Correct the program.

P932 Rot axis parameter error

Details There is an illegal linear axis name or rotary axis name set in the rotary axis configuration parameters.

There is an illegal setting in the parameter concerning the configuration of the inclined surface machining axis.

Remedy - Set the correct value and turn the power ON again.

P940 No spec: Tool tip control

Details There is no specification for tool tip center control.

Remedy - Check the specifications.

P941 Invalid T tip control command

Details A tool tip center control command was issued during a modal for which a tool tip center control command cannot be issued.

Remedy - Correct the program.

P942 Invalid cmnd during T tip ctrl

Details A G code that cannot be commanded was issued during tool tip center control.

Remedy - Correct the program.

P943 Tool posture command illegal

Details In tool tip center control type 1, if the signs at the tool-side rotary axis or table base-side rotary axis start and finish points differ, a tool base-side rotary axis or table workpiece-side rotary axis rotation exists for the same block, and does not pass a singular point. In tool tip center control type 2, the posture vector command is incorrect.

Remedy - Correct the program.

P950 No spec: Tilt face machining

Details Inclined surface machining option is not supported.

Remedy - Check the specifications.

P951 III cmd in tilt face machining

Details A forbidden command (G command, etc) was issued during inclined surface machining.

Remedy - Check the program. If you want to execute a command (G command, etc) that is unavailable during inclined surface machining, cancel the inclined surface machining.

I Alarms Program Errors (P)

P952 Inclined face cut prohibited

Details Inclined surface machining was commanded during the mode where the machining is unavailable.

Inclined surface machining was commanded during interruption.

Remedy - Check the program and see whether any unavailable mode is included during inclined surface machining command. If any, cancel that mode.

P953 Tool axis dir cntrl prohibited

Details Tool axis direction control was commanded during the mode where the control is unavailable.

 Check the program and see whether any unavailable mode is included during tool axis direction control. If any, cancel that mode.

P954 Inclined face command error

Details The address to issue the inclined surface machining command is incorrect.

Remedy - Check the program.

P955 Inclined face coord illegal

Details. Impossible to define an inclined surface with the values you specified.

Remedy - Check the program.

P957 Tool axis dir ctrl cmp amt 0

Details When the tool axis direction control type 2 (G53.6) was commanded, a tool length compensation No. whose compensation amount is 0 was commanded.

Remedy - Correct the program. Set the tool length compensation amount, or command a tool length compensation No. whose compensation amount is not 0.

P990 PREPRO error

Details Combining commands that required pre-reading (nose R offset, corner chamfering/corner rounding, geometric IB, and compound type fixed cycle for turning machining) resulted in eight or more pre-read blocks.

Remedy - Delete some or all of the combinations of commands that require pre-reading.

II Parameters

The parameters with "(PR)" requires the CNC to be turned OFF after the settings. Turn the power OFF and ON to enable the parameter settings

【#8001】 WRK COUNT M

Set the M code for counting the number of the workpiece repeated machining.

The number of the M-codes set by this parameter is counted. The No. will not be counted when set to "0".

---Setting range-O to gag

[#8002] WRK COUNT

Set the initial value of the number of workpiece machining. The number of current workpiece machining is displayed.

---Setting range 0 to 999999

[#8003] WRK COUNT LIMIT

Set the maximum number of workpiece machining.

A signal will be output to PLC when the number of machining times is counted to this limit.

---Setting range

0 to 999999

【#8004】 SPEED

Set the feedrate during automatic tool length measurement.

---Setting range

1 to 1000000 (mm/min)

【#8005】 ZONE r

Set the distance between the measurement point and deceleration start point.

-Setting range

0 to 99999.999 (mm)

[#8006] ZONE d

Set the tolerable range of the measurement point.

An alarm will occur when the sensor signal turns ON before the range, set by this parameter, has not been reached from the measurement point, or when the signal does not turn ON after the range is passed

---Setting range

0 to 99999.999 (mm)

【#8007】 OVERRIDE

Set the override value for automatic corner override.

---Setting range

0 to 100 (%)

【#8008】 MAX ANGLE

Set the maximum corner opening angle where deceleration should start automatically. When the angle is larger than this value, deceleration will not start.

---Setting range 0 to 180 (°)

[#8009] DSC. ZONE

Set the position where deceleration starts at the corner

Designate at which length point before the corner deceleration should start.

---Setting range

0 to 99999.999 (mm)

[#8010] ABS. MAX. (for L system only)

Set the maximum value when inputting the tool wear compensation amount.

A value exceeding this setting value cannot be set.

Absolute value of the input value is set.
(If a negative value is input, it is treated and set as a positive value.)

If "0" is input, this parameter will be disabled.

---Setting range---0 to 999,999 (mm)

(Input setting increment applies)

【#8011】 INC. MAX. (for L system only)

Set the maximum value for when inputting the tool wear compensation amount in the

incremental mode

A value exceeding this setting value cannot be set.

Absolute value of the input value is set.

(If a negative value is input, it is treated and set as a positive value.)

If "0" is input, this parameter will be disabled.

--Setting range

0 to 999.999 (mm)

(Input setting increment applies)

【#8012】 G73 n (for M system only)

Set the return amount for G73 (step cycle).

---Setting range---

0 to 99999.999 (mm)

【#8013】 G83 n

Set the return amount for G83 (deep hole drilling cycle).

---Setting range--

0 to 99999.999 (mm)

[#8014] CDZ-VALE (for L system only)

Set the screw cut up amount for G76 and G78 (thread cutting cycle).

---Setting range---

0 to 127 (0.1 lead)

【#8015】 CDZ-ANGLE (for L system only)

Set the screw cut up angle for G76 and G78 (thread cutting cycle).

---Setting range-

0 to 89 (°)

[#8016] G71 MINIMUM (for L system only)

Set the minimum value of the last cutting amount by the rough cutting cycle (G71, G72). The cutting amount of the last cutting will be the remainder. When the remainder is smaller than this parameter setting, the last cycle will not be executed.

---Setting range---

0 to 999.999 (mm)

【#8017】 G71 DELTA-D (for L system only)

Set the change amount of the rough cutting cycle.

The rough cutting cycle (G71, G72) cutting amount repeats $d+ \triangle d$, d, $d- \triangle d$ using the value (d) commanded with D as a reference. Set the change amount $\triangle d$.

--Setting range---

0 to 999.999 (mm)

[#8018] G84/G74 n (for M system only)

Not used. Set to "0"

[#8019] R COMP

Set a compensation coefficient for reducing a control error in the reduction of a corner roundness and arc radius

roundness and arc radius.

The larger the set value is, the smaller the theoretical error will be. However, since the speed at the corner goes down, the cycle time will be extended.

Coefficient = 100 - set value

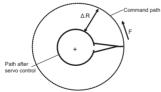

(Note) This function will be enabled when "#8021 COMP_CHANGE" is set to "0".

---Setting range-

0 to 99 (%)

Theoretical radius decrease error amount

Displays the theoretical radius decrease error amount, $\,\Delta\,\text{R}(\text{mm}),$ from the automatic calculation by NC.

Theoretical radius decrease amount in arc

R5mm arc deceleration speed

Displays a deceleration speed(mm/min) along an arc of 5(mm) radius.

R1mm arc deceleration speed

Displays a deceleration speed(mm/min) along an arc of 1(mm) radius.

【#8020】 DCC ANGLE

Set the minimum value of an angle (external angle) that should be assumed to be a corner. When an inter-block angle (external angle) in high-accuracy mode is larger than the set value, it will be determined as a corner and the speed will go down to sharpen the edge.

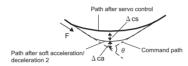

(Note) If "0" is set, it will be handled as "5" degrees.

- ---Setting range

 - 0 to 89 (°) 0: 5 degree (Equals to setting "5")

Theoretical corner dull amount

Displays the corner dull amount $\Delta c(mm)$ in respect to the corner's angle (external angle) θ (°).

Theoretical roundness amount at corner

ca(mm): Error (\(\Delta \)) caused by the soft acceleration/deceleration 2

cs(mm): Error (\Delta) caused by the servo system

Display corner deceleration speed c (mm/min) for the corner of the angle (external angle) with θ (°).

Theoretical dull amount at 90 degree

Display corner dull amount when the angle is 90 degree.

Display corner deceleration speed when the angle is 90 degree.

[#8021] COMP_CHANGE

【#8022】 CORNER COMP

Select whether to share or separate the compensation coefficient at the corner/curve during the high-accuracy control mode.
0: Share ("#8019 R COMP" is applied.)
1: Separate

- Corner : #8022 CORNER COMP Curve : #8023 CURVE COMP
- (Note) Set "1" when using SSS control.

Set the compensation coefficient to further reduce or increase the roundness at the corner during the high-accuracy control mode.

Coefficient = 100 - setting value

(Note) This is valid when "#8021 COMP CHANGE" is set to "1"

Reference to "#8020 Corner decreasing speed "for theoretical corner roundness amount, corner decreasing speed, theoretical 90 degree dull amount, 90 degree corner decreasing speed.

---Setting range -1000 to 99 (%)

【#8023】 CURVE COMP

Set the compensation coefficient to further reduce or increase the radius reduction amount at the curve (arc, involute, spline) during the high-accuracy control mode. Coefficient = 100 - setting value

(Note) This is valid when "#8021 COMP CHANGE" is set to "1".

For theoretical radius reduction error amount, R5mm arc deceleration speed and R1mm arc deceleration speed, refer to "#8019 R COMP"

---Setting range

-1000 to 99 (%)

[#8025] SPLINE ON (for M system only)

Select whether to enable the spline function.

0: Disable

Spline interpolation is valid during G61.2 modal, regardless of this setting.

[#8026] CANCEL ANG. (for M system only)

Set the angle where the spline interpolation is temporarily canceled. When the angle made by blocks exceeds this parameter setting value, spline interpolation will be canceled temporarily. In consideration of the pick feed, set a value a little smaller than the pick feed angle.

-Setting range 0 to 180 (°) 0: 180 (°

[#8027] Toler-1 (for M system only)

Set the maximum chord error (tolerance) in a block that includes an inflection point. Set the tolerance applicable when the applicable block is developed to fine segments by CAM. (normally about 10 µ m)

When "0,000" is set, the applicable block will be linear.

---Setting range 0.000 to 100.000 (mm)

[#8028] Toler-2 (for M system only)

Set the maximum chord error (tolerance) in a block that includes no inflection point. Set the tolerance applicable when the applicable block is developed to fine segments by CAM. (normally about 10 μ m)

When "0.000" is set, the applicable block will be linear.

---Setting range 0.000 to 100.000 (mm)

【#8029】 FairingL (for M system only)

Set the length of the block subject to fairing. (Enabled when "#8033 Fairing ON" is set to "1".)

---Setting range 0 to 100.000 (mm)

[#8030] MINUTE LENGS (for M system only)

Set the fine-segment length where the spline interpolation is temporarily canceled When the length of one block exceeds this parameter setting value, spline interpolation is canceled temporarily and linear interpolation is performed. Set a value a little smaller than

one block length of the program.

If "-1" is set, spline interpolation will be performed regardless of block length.

---Setting range -1 to 127 (mm) 0: 1 (mm)

【#8033】 Fairing ON (for M system only)

Select whether to use the fairing function.

0: Not use 1: Use

Fairing function is enabled during G61.2 modal, regardless of this setting.

[#8034] AccClamp ON (for M system only)

Select the method for clamping the cutting speed.

0: Clamp with parameter "#2002 clamp" or the corner deceleration function.

1: Clamp the cutting speed with acceleration judgment. (Enabled when "#8033 Fairing ON" is set to "1".)

[#8036] CordecJudge (for M system only)

Select the condition to decide a corner.

O: A corner is decided from the angle of the neighboring block.

1: A corner is decided from the angle of the neighboring block, excluding minute blocks.
(Enabled when "#8033 Fairing ON" is set to "1".)

[#8037] CorJudgeL (for M system only)

Set the length of the block to be excluded when deciding a corner. (Enabled when "#8036 CordecJudge" is set to "1".)

---Setting range-

0 to 99999.999 (mm)

【#8041】 C-rot.R

Set the length from the center of the normal line control axis to the tool tip. This is used to calculate the turning speed at the block joint

This is enabled during the normal line control type II.

---Setting range

0.000 to 99999.999 (mm)

[#8042] C-ins.R

Set the radius of the arc to be automatically inserted into the corner during normal line

control.

This is enabled during the normal line control type I.

---Setting range

0.000 to 99999.999 (mm)

【#8043】 Tool HDL FD OFS

Set the length from the tool holder to the tool tip.

-Setting range 0.000 to 99999.999 (mm)

【#8044】 UNIT*10

Set the command increment scale.
The scale will be "1" when "0" is set.

---Setting range

0 to 10000 (fold)

0: One fold

【#8051】 G71 THICK

Set the amount of cut-in by the rough cutting cycle (G71, G72)

-Setting range

0 to 99999.999 (mm)

【#8052】 G71 PULL UP

Set the amount of pull-up when returning to the cutting start point for the rough cutting cycle (G71. G72).

--Setting range 0 to 99999.999 (mm)

【#8053】 G73 U

Set the X-axis cutting margin of the forming rough cutting cycle (G73).

---Setting range-

-99999 999 to 99999 999 (mm)

【#8054】 G73 W

Set the Z-axis cutting margin of the forming rough cutting cycle (G73).

---Setting range-

-99999.999 to 99999.999 (mm)

【#8055】 G73 R

Set how many times cutting will be performed in the forming rough cutting cycle (G73).

-Setting range

0 to 99999 (times)

【#8056】 G74 RETRACT

Set the amount of retract (amount of cut-up) of the cutting-off cycle (G74, G75).

---Setting range

0 to 999.999 (mm)

[#8057] G76 LAST-D

Set the amount of final cut-in by the compound type thread cutting (G76).

---Setting range

0 to 999.999 (mm)

[#8058] G76 TIMES

Set how many times the amount of final cut-in cycle (G76 finish margin) will be divided in the compound type thread cutting (G76).

---Setting range-

0 to 99 (times)

[#8059] G76 ANGLE

Set the angle (thread angle) of the tool nose in the compound type thread cutting (G76).

--Setting range

0 to 99 (°)

【#8060】 G71 ERR

Set the tolerable error range to avoid a program error (a shape change at pocket machining) against minute inversion when the finished shape's Z axis (or X axis at G72 command) does not move monotonously.

---Setting range-

0.000 to 0.010 (mm)

[#8071] 3-D CMP (for M system only)

Set the value of the denominator constants for 3-dimensional tool radius compensation.

Set the value of "p" in the following formula.

Vx = i x r/p, Vy = j x r/p, Vz = k x r/p Vx, Vy, Vz : X, Y, and Z axes or vectors of horizontal axes

 $p = \sqrt{(i2 + j2 + k2)}$ when the set value is "0".

---Setting range

0 to 99999.999

[#8072] SCALING P (for M system only)

Set the scale factor for reduction or magnification in the machining program specified by G50 or G51 command

This parameter will be valid when the program specifies no scale factor.

---Setting range

-99.999999 to 99.999999

[#8075] SpiralEndErr (for M system only)

Set the tolerable error range (absolute value) when the end point position, commanded by the spiral or conical interpolation command with the command format type 2, differs from the end point position obtained from the speed and increment/decrement amount.

-Setting range

0 to 99999.999 (mm)

【#8078】 Screen Saver Timer

Set the period of time before turn-OFF of the display unit backlight. When "0" is set, the backlight is not turned OFF

is set, the backlight is not turned OFF.

-Setting range

0 to 60 (min)

0: The backlight is not turned OFF

【#8081】 Gcode Rotat (for L system only)

Set the rotation angle for the program coordinate rotation command.

This parameter is enabled when "1" is set in "#1270 ext06/bit5 (Coordinate rotation angle without command)"

This parameter is set as absolute value command regardless of the "#8082 G68.1 R INC" setting. If the rotation angle is designated by an address R in G68.1 command, the designation by program will be applied.

---Setting range

-360,000 to +360,000 (°)

[#8082] G68.1 R INC (for L system only)

Select absolute or increment command to use for the rotation angle command R at Lsystem coordinate rotation

0: Use absolute value command in G90 modal, incremental value command in G91 modal

1: Always use incremental value command

(Note) If G91 does not exist in the G code system, the command type is decided by this parameter only

【#8083】 G83S modeM (for M system only)

Set the Micommand code for changing to the small diameter deep hole drilling cycle mode

-Setting range

1 to 99999999

[#8084] G83S Clearance (for M system only)

Set the clearance amount for the small diameter deep hole drilling cycle (G83).

---Setting range

0 to 999 999 (mm)

[#8085] G83S Forward F (for M system only)

Set the feedrate from the R point to the cutting start position in the small diameter deep hole drilling cycle (G83).

---Setting range-

0 to 99999 (mm/min)

[#8086] G83S Back F (for M system only)

Set the speed for returning from the hole bottom during the small diameter deep hole drilling cycle (G83).

---Setting range-

0 to 99999 (mm/min)

[#8090] SSS ON (for M system only)

Set whether to enable the SSS control with G05 P10000.

0. Disable

1: Enable

[#8091] StdLength (for M system only)

Set the maximum value of the range for recognizing the shape

To eliminate the effect of steps or errors, etc., set a large value. To enable sufficient deceleration, set a small value.

If "0,000" is set, the standard value (1,000mm) will be applied.

---Setting range

0 to 100.000 (mm)

[#8092] ClampCoeff (for M system only)

Set the clamp speed at the curved section configured of fine segments.

Coefficient = √ setting value

---Setting range-

1 to 100

[#8093] StepLeng (for M system only)

Set the width of the step at which the speed is not to be decelerated. (Approximately the same as the CAM path difference [Tolerance].)

If "0" is set, the standard value (5 μ m) will be applied.

If a minus value is set, the speed will decelerate at all minute steps.

---Setting range

-1 000 to 0 100 (mm)

[#8094] DccWaitAdd (for M system only)

Set the time to wait for deceleration when the speed FB does not drop to the clamp speed.

-Setting range 0 to 100 (ms)

【#8101】 MACRO SINGLE

Select how to control the blocks where the user macro command continues.

- Do not stop while macro blocks continue.
- 1: Stop every block during signal block operation.

【#8102】 COLL. ALM OFF

Select the interference (bite) control to the workpiece from the tool diameter during tool radius compensation and nose R compensation

O: An alarm will be output and operation stops when an interference is judged.

1: Changes the path to avoid interference

【#8103】 COLL. CHK OFF

Select the interference (bite) control to the workpiece from the tool diameter during tool radius compensation and nose R compensation.

Performs interference check.
 Does not perform interference check.

[#8105] EDIT LOCK B

Select the edit lock for program Nos. 8000 to 9999 in the memory.

0: Enable the editing

1: Prohibit the editing of above programs.

When "1" is set, the file cannot be opened.

【#8106】 G46 NO REV-ERR (for L system only)

Select the control for the compensation direction reversal in G46 (nose R compensation).

- 0: An alarm will be output and operation will stop when the compensation direction is reversed (G41 -> G42' G42 -> G41).
- 1: An alarm won't occur when the compensation direction is reversed, and the current compensation direction will be maintained.

[#8107] R COMPENSATION

Select whether to move to the inside because of a delay in servo response to a command during arc cutting mode

- Move to the inside, making the arc smaller than the command value.
- 1: Compensate the movement to the inside

[#8108] R COMP Select

Select the arc radius error compensation target.

- Perform compensation over all axes
 Perform compensation axis by axis.

(Note) This parameter is effective only when "#8107 R COMPENSATION" is "1".

【#8109】 HOST LINK

Select whether to enable computer link B instead of the RS-232C port.

Disable (Enable normal RS-232C communication.)
 Enable (Disable normal RS-232C communication.)

[#8110] G71/G72 POCKET

Select whether to enable the pocket machining when there is a dimple (pocket) in the rough cutting cycle (G71, G72) finishing program.
0: OFF
1: ON

[#8111] Milling Radius

Select the diameter and radius of the linear axis for milling (cylindrical/pole coordinate) interpolation.

0: All axes radius command

1: Each axis setting (follows "#1019 dia")

(Note) This parameter is valid only in the milling (cylindrical/polar coordinate) interpolation mode

【#8112】 DECIMAL PNT-P

Select whether to enable the decimal point command for G04 address P.

0: Disable

【#8113】 Milling Init G16

Set which plane to execute for milling machining after the power is turned ON or reset.

#8113:0, #8114:0 ---> G17 plane #8113:0, #8114:0 ---> G17 plane #8113:0, #8114:1 ---> G19 plane #8113:1, #8114:0 ---> G16 plane #8113:1, #8114:1 ---> G16 plane

∩ Not G16 plane

1: G16 plane

(Note) This parameter is valid for the G code system 2 or 3 ("#1037 cmdtyp"="3" or "4").

【#8114】 Milling Init G19

Set which plane to execute for milling machining after the power is turned ON or reset.

#8113:0, #8114:0 ---> G17 plane #8113:0, #8114:1 ---> G19 plane #8113:1, #8114:0 ---> G16 plane #8113:1, #8114:1 ---> G16 plane

0: Not G19 plane

1: G19 plane

(Note) This parameter is valid for the G code system 2 or 3 ("#1037 cmdtyp"="3" or "4").

[#8116] Coord rot para invd

Select whether to enable the coordinate rotation by the parameters.

0: Enable

1. Disable

[#8117] OFS Diam DESIGN

Select tool radius or tool diameter compensation amount to be specified.

Tool radius compensation amount
 Tool diameter compensation amount

【#8119】 Comp. unit swit

Select the setting unit of compensation amount that has no decimal point.

0: 1mm (or 1inch) unit 1: The minimum command unit (follows "#1003 iunit")

[#8120] FONT SELECTION

Select the font when Simplified Chinese is selected for "#1043 lang".
0: MITSUBISHI CNC GOTHIC font

1: Standard Windows font

(Note) This parameter is available for M700VW only.

【#8121】 Screen Capture

Select whether to enable the screen capture function.

0: Disable

1: Enable

(Note1) By setting this parameter to "1", and by keeping pushing the [SHIFT] key, screen capture will be executed.

(Note2) This parameter is valid with 700VS/70 Series.

【#8122】 Keep G43 MDL M-REF

Select whether to keep the tool length offset by high speed manual reference position return during tool length offset

0: Will not be kept (Cancel)

1: Kept

【#8123】 H-spd retract ON

Select whether to enable the drilling cycle at high-speed retract in fixed cycle for drilling.

0: Disable 1: Enable

[#8124] Mirr img at reset

Select the operation type of the mirror image by parameter setting and the mirror image by external input.

- On: The current mirror image is canceled, and new mirror image will start with the machine position at reset as the mirror center.
- 1: The mirror center is kept to continue the mirror image

[#8125] Check Scode in G84

Select how to operate when there is no S command in synchronous tapping block.

0: Use the spindle function modal value as S-command value.

1: Output a program error.

[#8126] Disable op tone

Select whether to disable keyboard/touch panel operation tones.

0: Enable the operation tones 1: Disable the operation tones

(Note)This setting is valid only for M700VS/M70V/M70 Series.

【#8145】 Validate F1 digit

Select whether to execute the F command with a 1-digit code command or with a direct

- 0: Direct numerical command (command feedrate during feed per minute or rotation)
- 1: 1-digit code command (with the feedrate specified by the parameters "#1185 spd F1" to "#1189 spd F5")

【#8154(PR)】

Not used. Set to "0".

【#8155】 Sub-pro interrupt

Select the method for the user macro interrupt.

0: The user macro interrupt of macro type
1: The user macro interrupt of sub-program type

[#8156] Fine thread cut E

- Select the address E type when cutting an inch screw.

 0: Specify the number of threads per inch for inch screw cutting.
 - 1: Specify the precision lead for inch screw cutting.

[#8157] Radius comp type B (M system) / Nose R comp type B (L system)

For M system

Select the method of the arithmetic processing for the intersection point when the start-up or cancel commands are operated during radius compensation.

0: The processing does not handle the start-up or cancel command block: handle the

- offs et vector in the direction vertical to that of the command instead
- 3. The processing is executed for the intersection point between the command block and the next block.

For L system For L system
Select the method of the arithmetic processing for the intersection point when the start-up or cancel commands are operated during nose R or radius compensation.
O: The processing does not handle the start-up or cancel command block: handle the

- offset vector in the direction vertical to that of the command instead
- 1: The processing is executed for the intersection point between the command block and the next block

【#8158】 Init const sur spd

Select the initial state after power-ON.

- Constant surface speed control cancel mode
 Constant surface speed control mode.

【#8159】 Synchronous tap

Select whether to use the floating tap chuck in G74 and G84 tap cycles.

- 0: With a floating tapping chuck
- 1: Without a floating tapping chuck

【#8160】 Start point alarm

Select an operation when the operation start point cannot be found while moving to the next block of G117.

- The auxiliary function is enabled after the block for the movement has finished.
 The program error (P33) occurs.

【#8173】 Hold intr amount

Select whether to clear or hold the interruption amount after the "NC reset 1 (or 2)" signal is ON when the manual ABS switch is OFF

- Clear (Reset the coordinate deviation due to the interruption)
 Hold

[#8201] AX. RELEASE

Select the function to remove the control axis from the control target.

- 0: Control as normal.
- Remove from control target.

[#8202] OT-CHECK OFF

Select whether to enable the stored stroke limit II function set in #8204 and #8205

- 0: Enable
- 1. Disable

【#8203】 OT-CHECK-CANCEL

When the simple absolute position method ("#2049 type" is "9") is selected, the stored stroke limits I, II (or IIB) and IB can be disabled until the first reference position return is executed after the power is turned ON.

- 0: Enable (according to #8202)
- 1: Temporarily cancel

(Note) "#8203 OT-CHECK-CANCEL" affects all the stored stroke limits.

[#8204] OT-CHECK-N

Set the coordinates of the (-) direction in the movable range of the stored stroke limit II or the lower limit coordinates of the prohibited range of stored stroke limit IIB

If the sign and value are the same as #8205, the stored stroke limit II (or IIB) will be invalid. If the stored stroke limit IIB function is selected, the prohibited range will be between two points even when #8204 and #8205 are set in reverse. When II is selected, the entire range will be prohibited if #8204 and #8205 are set in reverse.

---Setting range -99999 999 to 99999 999 (mm)

【#8205】 OT-CHECK-P

Set the coordinates of the (+) direction in the movable range of the stored stroke limit II or the upper limit coordinates of the prohibited range of stored stroke limit IIB.

---Setting range

-99999.999 to 99999.999 (mm)

[#8206] TOOL CHG. P

Set the coordinates of the tool change position for G30. n (tool change position return). Set with coordinates in the basic machine coordinate system.

---Setting range

-99999.999 to 99999.999 (mm)

[#8207] G76/87 IGNR (for M system only)

Select whether to enable the shift operation at G76 (fine boring) and G87 (back boring).

- 0: Enable 1: Disable

[#8208] G76/87 (-) (for M system only)

Select the shift direction at G76 and G87.

- 0: Shift to (+) direction 1: Shift to (-) direction

[#8209] G60 SHIFT (for M system only)

Set the last positioning direction and distance for a G60 (unidirectional positioning) command.

-Setting range

-99999.999 to 99999.999 (mm)

【#8210】 OT INSIDE

Select whether the stored stoke limit function set by #8204 and #8205 prevents the machine from moving to the inside or outside of the specified range.

O: Inhibits outside area (Select stored stroke limit II.)
1: Inhibits inside area (Select stored stroke limit II B.)

(#8211) MIRR. IMAGE

Select whether to enable the parameter mirror image function.

- 0: Disable
- 1: Enable

[#8213(PR)] Rotation axis type

Select the rotation type (short-cut valid/invalid) or linear type (workpiece coordinate linear type/all coordinate linear type).

This parameter is enabled only when "#1017 rot" is set to "1". (Note)

- 0: Short-cut invalid 1: Short-cut valid
- 2: Workpiece coordinate linear type
- 3: All coordinate linear type

(Note) The movement method is as follows by the specified rotation axis type.

<Workpiece coordinate value>

- 0,1 : Display range 0° to 359.999° 2,3 : Display range 0° to ± 99999.999°

Machine coordinate value/relative position>
0,1,2: Display range 0° to 359.999°
3: Display range 0° to ± 99999.999°

- <ABS command>
 - 0: The incremental amount from the end point to the current position is divided by 360, and the axis moves by the remainder amount according to the sign.
 - 1 : Moves with a short-cut to the end point.
 - 2.3: In the same manner as the normal linear axis, moves according to the sign by the amount obtained by subtracting the current position from the end point.

<INC command>

0,1,2,3: Moves in the direction of the commanded sign by the commanded incremental amount starting at the current position.

<Reference position return>

0.1.2: The movement to the middle point applies to the ABS command or the INC command.

Returns with movement within 360 degrees from the middle point to reference position. 3: The movement to the middle point applies to the ABS command or the INC

command. Moves and returns in the reference position direction for the difference from the current position to the reference position.

[#8215] TLM std length

Set the TLM standard length.

TLM standard length is the distance from a tool replacement point (reference position) to the measurement basic point (surface) which is used to measure the tool length.

---Setting range

-99999.999 to 99999.999 (mm)

【#8216】 Type in G28 return

Select the performance after establishing the reference position in reference position return command

- 0: Moves to the reference position
- 1: Won't move to the reference position.

[#8217] Check start point

Set a drawing start position in graphic check of each axis

-Setting range

-99999.999 to 99999.999 (mm)

[#8300] P0 (for L system only)

Set the reference X-coordinates of the chuck and the tail stock barrier

Set the center coordinate (radius value) of workpiece by the basic machine coordinate system

---Setting range

-99999.999 to 99999.999 (mm)

[#8301] P1 (for L system only)

Set the area of the chuck and tail stock barrier.

Set the coordinate from the center of workpiece (P0) for X-axis. (radius value)

Set the coordinate value by basic machine coordinate system for Z-axis.

---Setting range

-99999 999 to 99999 999 (mm)

【#8302】 P2 (for L system only)

Set the area of the chuck and tail stock barrier.

Set the coordinate from the center of workpiece (P0) for X-axis. (radius value) Set the coordinate value by basic machine coordinate system for Z-axis.

-Setting range

-99999.999 to 99999.999 (mm)

[#8303] P3 (for L system only)

Set the area of the chuck and tail stock barrier

Set the coordinate from the center of workpiece (P0) for X-axis. (radius value)

Set the coordinate value by basic machine coordinate system for Z-axis.

---Setting range-

-99999.999 to 99999.999 (mm)

[#8304] P4 (for L system only)

Set the area of the chuck and tail stock barrier.

Set the coordinate from the center of workpiece (P0) for X-axis. (radius value)

Set the coordinate value by basic machine coordinate system for Z-axis.

---Setting range

-99999.999 to 99999.999 (mm)

【#8305】 P5 (for L system only)

Set the area of the chuck and tail stock barrier.

Set the coordinate from the center of workniece (P0) for X-axis (radius value) Set the coordinate value by basic machine coordinate system for Z-axis.

--Setting range

-99999.999 to 99999.999 (mm)

[#8306] P6 (for L system only)

Set the area of the chuck and tail stock barrier

Set the coordinate from the center of workpiece (P0) for X-axis. (radius value)

Set the coordinate value by basic machine coordinate system for Z-axis.

---Setting range-

-99999.999 to 99999.999 (mm)

[#8310] Barrier ON (for L system only)

Select whether to enable the chuck and tailstock barrier.

0: Disable (Setting from special display unit will be enabled)

1: Enable

[#8311] P7 (for L system only)

Set the area of the left spindle section.

Set the coordinate from the center of workpiece (P0) for X-axis. (radius value) Set the coordinate value by basic machine coordinate system for Z-axis.

---Setting range

-99999.999 to 99999.999 (mm)

【#8312】 P8 (for L system only)

Set the area of the left spindle section.

Set the coordinate from the center of workpiece (P0) for X-axis. (radius value)

Set the coordinate value by basic machine coordinate system for Z-axis.

--Setting range

-99999.999 to 99999.999 (mm)

[#8313] P9 (for L system only)

Set the area of the right spindle section.

X axis: Set the coordinate from the workpiece center (P0). (radius value) Z axis: Set the coordinates in the basic machine coordinate system.

-Setting range

-99999.999 to 99999.999 (mm)

[#8314] P10 (for L system only)

Set the area of the right spindle section.

Set the coordinate from the center of workpiece (P0) for X-axis, (radius value)

Set the coordinate value by basic machine coordinate system for Z-axis.

---Setting range

-99999.999 to 99999.999 (mm)

[#8315] Barrier Type (L) (for L system only)

Select the shape of the left chuck and tailstock barrier.

- 0: No area
- 1: Chuck 2: Tailstock

【#8316】 Barrier Type (R) (for L system only)

Select the shape of the right chuck and tailstock barrier.

- 0: No area
- 1: Chuck 2: Tailstock

[#8317] ELIV. AX. Name (for L system only)

Set the name of the delivery axis when the right chuck and tailstock barrier is movable. When using the multi-part system method and the delivery axis is an axis in the other part system, designate the axis including the part system as 1A, 1B or 2A, 2B. If the part system is not designated as A and B, the set part system will be used.

---Setting range

A/B/.. (axis name)

2A/2B/.. (with part system designated)

0: Cancel

【#8318】 Stock Angle (L) (for L system only)

Set the angle for the left tailstock end section.

The angle will be interpreted as 90° if there is no setting (when "0" is set).

---Setting range

0 to 180 (°) 0: 90° (default)

【#8319】 Stock Angle (R) (for L system only)

Set the angle for the right tailstock end section.
The angle will be interpreted as 90° if there is no setting (when "0" is set).

---Setting range

0 to 180 (°) 0: 90° (default)

[#8621] Coord rot plane (H)

Set the plane (horizontal axis) for coordinate rotation control.

Usually, set the name of the 1st axis.

When this parameter is not set, the coordinate rotation function will not work.

---Setting range

Axis name

[#8622] Coord rot plane (V)

Set the plane (vertical axis) for coordinate rotation control.

Usually, set the name of the 2nd axis.

When this parameter is not set, the coordinate rotation function will not work.

---Setting range

Axis name

【#8623】 Coord rot centr (H)

Set the center coordinates (horizontal axis) for coordinate rotation control.

--Setting range

-999999.999 to 999999.999 (mm)

【#8624】 Coord rot centr (V)

Set the center coordinates (vertical axis) for coordinate rotation control.

-Setting range

-999999.999 to 999999.999 (mm)

[#8625] Coord rot vctr (H)

Set the vector components (horizontal axis) for coordinate rotation control.

When this parameter is set, the coordinate rotation control angle (#8627) will be automatically calculated.

---Setting range

-999999.999 to 999999.999 (mm)

【#8626】 Coord rot vctr (V)

Set the vector components (vertical axis) for coordinate rotation control

When this parameter is set, the coordinate rotation control angle (#8627) will be automatically calculated.

---Setting range

-999999.999 to 999999.999 (mm)

【#8627】 Coord rot angle

Set the rotation angle for coordinate rotation control.

When this parameter is set, the coordinate rotation vector (#8625, #8626) will be "0".

---Setting range

-360,000 to 360,000 (°)

【#8701】 Tool length

Set the length to the touch tool tip.

---Setting range

-99999.999 to 99999.999 (mm)

【#8702】 Tool Dia

Set the diameter of the sphere at the touch tool tip.

---Setting range-

-99999.999 to 99999.999 (mm)

[#8703] OFFSET X

This sets the deviation amount (X direction) from the touch tool center to the spindle center.

---Setting range

-99999.999 to 99999.999 (mm)

[#8704] OFFSET Y

Set the deviation amount (Y direction) from the touch tool center to the spindle center.

---Setting range

-99999.999 to 99999.999 (mm)

[#8705] RETURN

Set the one-time return distance for contacting again.

-Setting range 0 to 99999.999 (mm)

【#8706】 FEED

Set the feedrate when contacting again.

---Setting range

1 to 60000 (mm/min)

【#8707】 Skip past amout (H)

Set the difference (horizontal axis direction) between the skip read value and actual skip position.

---Setting range

-99999.999 to 99999.999 (mm)

【#8708】 Skip past amout (V)

Set the difference (vertical axis direction) between the skip read value and actual skip position.

---Setting range--99999.999 to 99999.999 (mm)

【#8709】 EXT work sign rvs

Select when using the external workpiece coordinate system with Z shift.

Select whether to reverse the sign.

0: External workpiece offset (Z shift) without sign reversal

1: External workpiece offset (Z shift) with sign reversal

【#8710】 EXT work ofs invld

Set whether to enable external workpiece offset subtraction when setting the workpiece coordinate offset.

- 0: Not subtract the external workpiece offset, (Conventional specification)
 - Subtract the external workpiece offset.

[#8711] TLM L meas axis

Set the tool length measurement axis. Set the "#1022 axname2" axis name

---Setting range

Axis name

(Note) If the axis name is illegal or not set, the 3rd axis name will be set as default.

【#8712】 TLM D meas axis

Set the tool diameter measurement axis

Set the "#1022 axname2" axis name.

---Setting range

Axis name

(Note) If the axis name is illegal or not set, the 1st axis name will be set as default.

[#8713] Skip coord. Switch (For M system only)

Select the coordinate system for reading skip coordinate value.
Select whether to read the skip coordinate in the workpiece coordinate system or in the feature coordinate system during inclined surface machining command. Select whether to read the skip coordinate in the workpiece coordinate system or in the

workpiece installation coordinate system during workpiece installation error compensation.

Workpiece coordinate system
 Feature coordinate system/Workpiece installation coordinate system

[#8880] Subpro stor D0: dev

Select the storage destination (device) for the subprogram.

M:Memory, G:HD(Note), F:FD(Note), R:Memory card, D:Data server(Note)
(Note) This is available only with M700/M700/W Series.

When D0 is designated at a subprogram call, the subprogram to be called will be searched from the device selected with this parameter.

(Example) M98 P (program No.), D0 -> Device: "#8880 Subpro stor D0: dev" device __Directory: "#8881 Subpro stor D0: dir" directory

The device and directory above will be searched.

(Note 1) When the called subprogram is not found in the selected storage destination, a program error will occu

(Note 2) When D0 to D4 is not designated at a subprogram call, the subprogram will be searched from the memory

【#8881】 Subpro stor D0: dir

Select the storage destination (directory) for the subprogram.

When D0 is designated at a subprogram call, the subprogram to be called will be searched from the directory selected with this parameter. Refer to "#8880 Subpro stor D0: dev

---Setting range

Directory 48 characters

[#8882] Subpro stor D1: dev

Select the storage destination (device) for the subprogram.

M:Memory, G:HD(Note), F:FD(Note), R:Memory card, D:Data server(Note) (Note) This is available only with M700/M700VW Series.

When D1 is designated at a subprogram call, the subprogram to be called will be searched from the device selected with this parameter.

(Example) M98 P (program No.), D1 -> Device: "#8882 Subpro stor D1: dev" device Directory: "#8883 Subpro stor D1: dir" directory

The device and directory above will be searched.

[#8909(PR)] Aut/Manual switch

- Select the counter display method on Monitor screen.

 0: "AUTO/MDI" and "Manual" display is switched by the mode selection switch.
 - Display AUTO/MDI counter only.
 Display Manual counter only.
 - 3: Display the enlarged counter of "#8901 Counter type 1".

(Note) This parameter is disabled when "#11019 2-system display (2-part system simultaneous display)" is set to "1" or "2".

[#8910] Edit undo

Set whether to enable the Undo function during program edit on the Monitor screen or Edit screen.

- 0: Disable
- 1: Enable

(Note) This parameter is valid only with M700VW/M700VS/M700/M70V Series.

[#8913] Touch panel sense

Set the sensibility of the touch panel.

The smaller the setting value is, the more sensitive the panel will be

(1: sensitive, 4: insensitive)

When set to 0, the sensibility will be the same as when the standard setting of 2 is applied.

(Note) This parameter is available for M700VS/M70V/M70 Series.

---Setting range

0 to 4

[#8914] Auto Top search

Select the operation method for restart search type 2

0: It is necessary to set the top search position arbitrarily.

1: The restart search is executed from O No. that is designated as head.

[#8915] Auto backup day 1

When the NC power is ON after the designated date was passed over, the automatic

backup is executed.

When "-1" is set to "Auto backup day 1", the automatic backup is executed every turning NC power ON.
When "0" is set to all on "Auto backup day 1" to "4", the automatic backup is not executed.

It is possible to specify the designated date up to 4 days for a month.

---Setting range

-1 to 31("-1" can be set for "Auto backup day 1" only.)

[#8916] Auto backup day 2

When the NC power is ON after the designated date was passed over, the automatic

backup is executed.

When "-1" is set to "Auto backup day 1", the automatic backup is executed every turning NC

---Setting range

-1 to 31("-1" can be set for "Auto backup day 1" only.)

【#8917】 Auto backup day 3

When the NC power is ON after the designated date was passed over, the automatic

backup is executed.

When "-1" is set to "Auto backup day 1", the automatic backup is executed every turning NC

When "1" is set to Auto backup day 1, the automatic backup is chosses of all a secure power ON.
When "0" is set to all on "Auto backup day 1" to "4", the automatic backup is not executed.
It is possible to specify the designated date up to 4 days for a month.

--Setting range

-1 to 31("-1" can be set for "Auto backup day 1" only.)

【#8918】 Auto backup day 4

When the NC power is ON after the designated date was passed over, the automatic

backup is executed.

When "-1" is set to "Auto backup day 1", the automatic backup is executed every turning NC power ON. When "0" is

"0" is set to all on "Auto backup day 1" to "4", the automatic backup is not executed. It is possible to specify the designated date up to 4 days for a month.

---Setting range

-1 to 31("-1" can be set for "Auto backup day 1" only.)

[#8919] Auto backup device

Select the automatic backup target device.

[M700/M700VW Series]

0: DS 1: HD

2: Memory card

[M700VS/M70V Series]

0: Memory card 3: USB memory

[M70 Series]

0: Memory card

(Note) The setting range differs according to the model.

[#8920] 3D tool ofs select

Select the method to calculate the drawing position when drawing a solid. With 3D drawing, the drawing position (tool tip position) is calculated with the method designated with this parameter, and the image is drawn.

0: For tool radius compensation, use the tool compensation amount set in tool

- compensation screen. For tool length, use the value in tool set window. (for tool length measurement type I)
 - 1: Use the tool compensation amount set in tool compensation screen for both tool radius and tool length compensation. (for tool length measurement type II)
- 2: Use the value set in tool set window for both tool radius and tool length compensation. (for tool length measurement type I)

 3: Use the value set in tool set window for both tool radius and tool length
- compensation. (for tool length measurement type II)

[#8921] Mass Edit select

Select the editing mode for the machining programs saved in HD, FD, and memory card. When the program size is 1.0MB (When "#8910 Edit Undo" is invalid, 2.0MB) or more. When the program size is 1.0MB (When mass-editing will be applied.

- 0: Regular editing mode
- 1: Mass-editing mode

【#8922】 T-reg-dup check

Set whether to enable the duplication check in registering tools to magazine pots, and in setting tool Nos. for spindle/standby.

0: Duplication check valid for all valid magazines

1: Duplication check invalid

Duplication check valid only for the selected magazine

【#8923(PR)】 Hide Edit-IO menu

Set whether to enable the edit-in/out menu. When disabled, the edit-input/output menu won't appear. However, the maintenance-in/out menu is always enabled regardless of this parameter setting. 0: Enable

1: Disable

[#8924] MEAS. CONFIRM MSG

Select whether to display a confirming message when attempting to write compensation data for tool measurement, or coordinate system data for workpiece measurement.

Not display a confirming message
 Display a confirming message

[#8925] SP on 1st part sys

Set a spindle No. to be displayed on the 1st part system window when 2-part system simultaneous display is valid. On the 15-type display, 1-part system display can be also specified

High-order: Select an upper side spindle No. Low-order: Select a lower side spindle No

- (Note 1) When "00" is set in 2-part system simultaneous display, spindles will be displayed in a default order (the 1st spindle on the upper side, the 2nd spindle on the lower side). When "00" is set in 1-part system display of the 15-type display, all spindles will be displayed.
- (Note 2) if you designate a bigger number than the setting of "#1039 spinno", or either the high-order or low-order setting is "0", the 1st spindle will be displayed.

 (Note 3) if the low-order is set to "F", the spindle speed command value and the actual rotation number which are specified in the high-order will be displayed.

--Setting range High-order: 0 to 6 Low-order: 0 to 6. F

[#8926] SP on 2nd part sys

Set a spindle No. to be displayed on the 2nd part system window when 2-part system simultaneous display is valid. On the 15-type display, 1-part system display can be also specified

High-order: Select an upper side spindle No. Low-order: Select a lower side spindle No

- (Note 1) When "00" is set in 2-part system simultaneous display, spindles will be displayed in a default order (the 1st spindle on the upper side, the 2nd spindle on the lower side). When "00" is set in 1-part system display of the 15-type display, all spindles will be displayed.
- (Note 2) If you designate a bigger number than the setting of "#1039 spinno", or either the high-order or low-order setting is "0", the 1st spindle will be displayed.
- (Note 3) If the low-order is set to "F", the spindle speed command value and the actual rotation number which are specified in the high-order will be displayed.
- ---Setting range High-order: 0 to 6 Low-order: 0 to 6, F

【#8927】 SP on 3rd part sys

Set a spindle No. to be displayed on the 3rd part system window when 2-part system simultaneous display is valid. On the 15-type display, 1-part system display can be also specified.

High-order: Select an upper side spindle No.

Low-order: Select a lower side spindle No.

- (Note 1) When "00" is set in 2-part system simultaneous display, spindles will be displayed in a default order (the 1st spindle on the upper side, the 2nd spindle on the lower side). When "00" is set in 1-part system display of the 15-type display, all spindles will be displayed.
- (Note 2) If you designate a bigger number than the setting of "#1039 spinno", or either the high-order or low-order setting is "0", the 1st spindle will be displayed.

 (Note 3) If the low-order is set to "F", the spindle speed command value and the actual rotation number which are specified in the high-order will be displayed.

---Setting range High-order: 0 to 6 Low-order: 0 to 6. F

[#8928] SP on 4th part sys

Set a spindle No. to be displayed on the 4th part system window when 2-part system simultaneous display is valid. On the 15-type display, 1-part system display can be also specified.

High-order: Select an upper side spindle No. Low-order: Select a lower side spindle No.

(Note 1) When "00" is set in 2-part system simultaneous display, spindles will be displayed in a default order (the 1st spindle on the upper side, the 2nd spindle on the lower side). When "00" is set in 1-part system display of the 15-type display, all spindles will be displayed.

(Note 2) If you designate a bigger number than the setting of "#1039 spinno", or either the high-order or low-order setting is "0", the 1st spindle will be displayed.

(Note 3) If the low-order is set to "F", the spindle speed command value and the actual rotation number which are specified in the high-order will be displayed.

---Setting range-High-order: 0 to 6 Low-order: 0 to 6, F

【#8929】 Disable=INPUT:comp

[#8930] Disable=INPUT:var

Select whether to enable [=INPUT] menu in [T-ofs] (tool compensation amount setting) or [Coord] (workpiece coordinate system offset setting) menu on [Setup] screen.

0: Enable
1: Disable

Select whether to enable [=INPUT] menu in [Com var] (common variables) menu on [Monitr] screen.

0: Enable

[#8931] Display/Set limit

Select the restriction of the connected NC's screen display/settings on/from the remote control tool

- 0: Permit the screen display/settings
- 1: Permit the screen display only
- 2: Restrict the connection

[#8932(PR)] Hide measure scrn

Select whether to display the tool measurement screen and workpiece measurement screen

- 0: Display 1: Not display

[#8933] Disable Ingth comp

Set whether to disable the setting of tool shape compensation amount.

- 0: Not disable
- 1: Disable

The shape compensation amount covers the following data according to the tool compensation type.

- Compensation type A ("1" in "#1037 cmdtyp(command type)")
 Compensation amount (the sum of shape compensation and wear compensation amount)
- amount)
 Compensation type B ("2" in "#1037 cmdtyp(command type)")
 Length dimension and radius dimension
 Compensation type C ("3" in "#1037 cmdtyp(command type)")
 Tool length and tool nose R

[#8934] Disable wear comp

Select whether to disable the setting of tool wear compensation amount.

- 0: Not disable
- 1. Disable

The wear compensation amount covers the following data according to the tool compensation type.

- compensation type. Compensation type A ("1" in "#1037 cmdtyp(command type 1)")

 ... This parameter is disabled.
 Compensation type B ("2" in "#1037 cmdtyp(command type)")

 ... Length wear and radius wear

 ... Length wear and radius wear

 ... Tool wear and tool nose wear

[#8935] W COORD CONFIRM

Select whether to display confirmation message when setting workpiece coordinate system offset in [Simple setting] menu.

- 0: Not display 1: Display

[#8936] Delete leading 0

In creating a file, or in transferring a file, if the file name of the new file, or the file name of the transfer destination consists only of numerical figures. 0 of the file name head will be deleted from the name

- 0: Designated file name (0 remains in the file name)
 1: 0 will be deleted from the file name

【#8937】 File sort volume

Set the maximum number of files to sort in the memory card and DS lists.

If the setting is large, update of the list may take longer.
With M70V/M70 Series, the maximum number will be 64 regardless of the setting of this parameter.

--Setting range

64 to 1000(M700/M700VW Series) 64 to 250(M700VS Series)

Standard: 64

[#8938] Edit-Not show Prg

Select whether to enable the automatic display on the Edit screen, when selected, of the programs searched by operation/check search or the MDI programs in MDI mode.

0: Enable the automatic display Disable the automatic display

【#8939】 Undo confirm msg

Display a confirming message when operating the [Undo] menu. 0: Not display a confirming message

1: Display a confirming message

【#8940】 Set select display

Select what to display in the selectable display area.

- 0: Common variable
- 1: Local variable
- 2: Workpiece coordinate system offset
- 3: All spindles' rotation speed
- 4: Expanded counters
- 5: Tool center coordinate display 6: Custom release window

(Note 1)This parameter is available for 15-type display unit only.

(Note 2)Tool center coordinate display is available only when any of the 5-axis related options is enabled.

[#8941(PR)] ABS/INC for T-ofs

Enable switching the method to set tool compensation data

(absolute/incremental value) with INPUT key.

- 0: Fix it to the absolute value input.
- Enable to switch between absolute and incremental value input.

[#8942(PR)] \$1 color

Set the color to be shown on the top-left of screen for the 1st part system. This enables switching the color patterns for each part system.

When set to the values 1 to 4, the part system name is shown in the form of button image. When set to 0, the settings between #8943 and #8945 is disabled and the screen is shown by the default color pattern for all the part systems.

- 0: Purple (no button image) (default)
- 1: Purple
- 2: Pink
- 3: Light blue 4: Orange

【#8943(PR)】 \$2 color

Set the color to be shown on the top-left of screen for the 2nd part system. This enables switching the color patterns for each part system. When set to the values 1 to 4, the part system name is shown in the form of button image.

Note) Enabled when #8942 (\$1 color) is set to the values 1 to 4.

- 1: Purple (default)
 - 2: Pink
 - 3: Light blue
 - 4: Orange

[#8944(PR)] \$3 color

Set the color to be shown on the top-left of screen for the 3rd part system. This enables switching the color patterns for each part system. When set to the values 1 to 4, the part system name is shown in the form of button image.

Note) Enabled when #8942 (\$1 color) is set to the values 1 to 4.

- 1: Purple (default)
- 2. Pink
- 3: Light blue 4: Orange

[#8945(PR)] \$4 color

Set the color to be shown on the top-left of screen for the 4th part system. This enables switching the color patterns for each part system. When set to the values 1 to 4, the part system name is shown in the form of button image.

Note) Enabled when #8942 (\$1 color) is set to the values 1 to 4.

- : Purple (default)
- 2: Pink
- 3: Light blue 4: Orange

[#8951] No Tab counter sw.

Disable Tab key to change the counter type.
0: Enable Tab key to change counter typ
(The value of #8905 also changes)
1: Disable Tab key to change counter type

【#8952】 Edit-win \$ switch

Select whether to enable switching of program displayed in the edit window on Monitor screen according to the displayed part system when part system switch is performed.

- 0: Not switch
- 1 Switch

【#8953】 2\$ disp switch typ

Select how to switch the part system to display when the 2-part system simultaneous display is enabled.

0: Switch by incrementing the No. of part system to display by one

1: Switch by skipping the system displayed in the non-active area. When a window is being popped up, however, this skip is not performed and the by incrementing the No. by one. system is switched

【#8956(PR)】 User key type

Select the definition type of the user-defined keys.

There are two user-defined keys

Type 1

It is the same as the conventional specification. A line feed between "\(\Pi\)" is not dealt as

It is dealt as an upper case/lower case letter depending on the CapsLock status. A symbolic character may be converted into a specific character.

Type 2

A line break inside square brackets "[]" is dealt as ";". Regardless of the CapsLock status, the defined character is input.

A symbolic character is also input as defined.

0 : Type 1 (Conventional specification) 1 : Type 2

(Note) This parameter is valid for M700VW series.

[#9001] DATA IN PORT

Select the port for inputting the data such as machine program and parameters.

2. ch2

[#9002] DATA IN DEV.

Select the device No. for inputting the data. (The device Nos. correspond to the input/output device parameters.)

---Setting range

0 to 4

[#9003] DATA OUT PORT

Select the port for outputting the data such as machine program and parameters.

1: ch1 2: ch2

【#9004】 DATA OUT DEV.

Select the device No. for outputting the data. (The device Nos. correspond to the input/output device parameters.)

---Setting range-

0 to 4

【#9005】 TAPE MODE PORT

Select the input port for running with the tape mode.

1 · ch1

2: ch2

[#9006] TAPE MODE DEV.

Select the device No. to be run with the tape mode. (The device Nos. correspond to the

input/output device parameters.)

---Setting range

0 to 4

【#9007】 MACRO PRINT PORT

Select the output port used for the user macro DPRINT command.

1: ch1

2: ch2 9: Memory card

【#9008】 MACRO PRINT DEV.

Select the device No. used for the DPRINT command. (The device Nos. correspond to the input/output device parameters.)

---Setting range

0 to 4

[#9009] PLC IN/OUT PORT

Select the port for inputting/outputting various data with PLC.

1: ch1 2: ch2

【#9010】 PLC IN/OUT DEV.

Select the device No. used for the PLC input/output. (The device Nos. correspond to the input/output device parameters.)

-Setting range-

0 to 4

【#9011】 REMOTE PRG IN PORT

Select the port for inputting remote programs.

1: ch1

2: ch2

【#9012】 REMOTE PRG IN DEV.

Select the device No. used to input remote programs. The device Nos. correspond to the input/output device parameters.

---Setting range 0 to 4

[#9013] EXT UNIT PORT

Select the port for communication with an external unit.

1: ch1 2: ch2

【#9014】 EXT UNIT DEV.

Select the unit No. used for communication with an external unit(The unit Nos. correspond to the input/output device parameters.)

---Setting range-

0 to 4

【#9017】 HANDY TERMINAL PORT

Select the port for communication with a handy terminal.

2. ch2

【#9018】 HANDY TERMINAL DEV.

Select the device No. used for communication with a handy terminal. (The device Nos. correspond to the input/output device parameters.)

---Setting range-

0 to 4

[#9051] Data I/O port

Select whether to use display side serial port or NC side serial port for data input/output function

- 0: Display side serial port
- 1: Display side serial port
- 2: NC side serial port

(Note) The setting range differs according to the model

[#9052] Tape mode port

Select whether to use display side serial port or NC side serial port for tape mode.

- 0: NC side serial port
- Display side serial port
- 2: NC side serial port

(Note) The setting range differs according to the model.

[#9053] M2 macro converter

Select whether to enable the macro converter when inputting M2/M0 formatted program via RS-232C (serial connection)

When enabling the converter, select whether to convert the comment part enclosed with brackets ()

- 0: Disable
- Enable; convert the comment part enclosed with brackets ().
- 2: Enable; not convert the comment part enclosed with brackets ().

【#9054】 MACRO PRINT FILE

Set the file name to save the output data to a memory card with the DRPNT command for the user macro

If this parameter is not set, the data will be output under the following name. dprt\$-MMDDhhmmssff

\$ is the part system No. in which DPRNT is commanded, MMDDhhmmssff is the current date

(MM: month, DD: day, hh: hour, mm: minute, ss: second, ff: millisecond)

(Note) This parameter is enabled when "#9007 Macro print directory" is set to "9".

---Setting range-

Program name or file name (32 characters)

【#9101】 DEV0 DEVICE NAME

Set the device name corresponding to the device No.

Set a simple name for quick identification.

---Setting range-

Use alphabet characters, numerals and symbols to set a name within 3 characters

【#9102】 DEV0 BAUD RATE

Select the serial communication speed.

- 0: 19200 (bps)
- 1: 9600 2: 4800
- 3: 2400
- 4: 1200
- 5: 600
- 6: 300

【#9103】 DEV0 STOP BIT

Select the stop bit length used in the start-stop system

Refer to "#9104 DEV0 PARITY CHECK". At the output of data, the number of characters is always adjusted for the parity check

- 1: 1 (bit) 2: 1.5 3: 2

【#9104】 DEV0 PARITY CHECK

Select whether to add the parity check bit to the data.

Set this parameter in accordance with the I/O device specifications.

- 0: Not add a parity bit in I/O mode
- 1: Add a parity bit in I/O mode

【#9105】 DEV0 EVEN PARITY

Select odd or even when parity is added to the data. This parameter is ignored when no parity is added. 0: Odd parity

- 1: Even parity

[#9106] DEV0 CHR. LENGTH

Set the length of the data bit. Refer to "#9104 DEV0 PARITY CHECK".

- 0: 5 (bit)
- 1: 6 2: 7 (NC connection not supported)
- 3: 8

【#9107】 DEV0 TERMINATR TYP

Select the code to terminate data reading.

- o, 3: EOR

 1, 2: EOB or EOR

 [When M700/700VW display side serial port is selected] 0: No terminator
- 1: EOR
- 2: EOB 3: EOB or EOR

[#9108] DEV0 HAND SHAKE

Select the transmission control method.

- No handshaking will be used when a value except 1 to 3 is set. 1: RTS/CTS method

 - 2: No handshaking
 - 3: DC code method

[#9109] DEV0 DC CODE PRTY

Select the DC code type when the DC code method is selected.
0: Not add parity to DC code (DC3 = 13H)
1: Add parity to DC code (DC3 = 93H)

【#9111】 DEV0 DC2/4 OUTPUT

Select the DC code handling when outputting data to the output device. DC2 / DC4

- 0: None / None 1: Yes / None
- 2: None / Yes 3: Yes / Yes

【#9112】 DEV0 CR OUTPUT

Select whether to add the (CR) code just before the EOB (L/F) code during output.

- 0: Not add 1: Add

【#9113】 DEV0 EIA OUTPUT

- Select ISO or EIA code for data output.

 In data input mode, the ISO and EIA codes are identified automatically.
 - 0: ISO code output
 - 1: EIA code output

[#9114] DEV0 FEED CHR.

Set the length of the tape feed to be output at the start and end of the data during tape output

- ---Setting range-
 - 0 to 999 (characters)

【#9115】 DEV0 PARITY V

Select whether to perform the parity check for the number of characters in a block at the input of data

At the output of data, the number of characters is always adjusted to for the parity check.

- Not perform parity V check
 Perform parity V check

【#9116】 DEV0 TIME-OUT (sec)

Set the time out time to detect an interruption in communication.

Time out check will not be executed when set to "0".

- ---Setting range
 - 0 to 30 (s)

【#9117】 DEV0 DR OFF

Select whether to enable the DR data check in data I/O mode.

- 0. Enable
 - 1: Disable

[#9118] DEV0 DATA ASCII

- Select the code of the output data.
 0: ISO/EIA code (Depends on whether #9113, #9213, #9313, #9413 or #9513 EIA output parameter is set up.)
 - 1: ASCII code

[#9119] DEV0 INPUT TYPE

Select the mode for input (verification).

0: Standard input (Data from the very first EOB is handled as significant information 1: EOBs following the first EOB of the input data are skipped until data other than EOB is input

[#9120] DEV0 OUT BUFFER

Select the buffer size of the output data which is output to output device using NC side serial port.

If the output device has a data receiving error (overrun error), decrease the buffer size with this parameter

If the buffer size is decreased, output time will prolong according to the size

- 0: 250 bytes (default)
- 1: 1 byte 2: 4 bytes
- 3: 8 bytes
- 4: 16 bytes 5: 64 bytes

【#9121】 DEV0 EIA CODE [

Set the code in hexadecimal, which does not duplicate the existing EIA codes, for the special code " [

When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

---Setting range---

0 to FF (hexadecimal)

【#9122】 DEV0 EIA CODE]

Set the code in hexadecimal, which does not duplicate the existing EIA codes, for the special code "]

When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

--Setting range

0 to FF (hexadecimal)

[#9123] DEV0 EIA CODE

Set the code in hexadecimal, which does not duplicate the existing FIA codes, for the special code "#

When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

---Setting range

0 to FF (hexadecimal)

【#9124】 DEV0 EIA CODE *

Set the code in hexadecimal, which does not duplicate the existing EIA codes, for the special code

When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

---Setting range-

0 to FF (hexadecimal)

[#9125] DEV0 EIA CODE =

Set the code in hexadecimal, which does not duplicate the existing EIA codes, for the special code "=

When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

--Setting range

0 to FF (hexadecimal)

【#9126】 DEV0 EIA CODE:

Set the code in hexadecimal, which does not duplicate the existing FIA codes, for the special code '

When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

---Setting range

0 to FF (hexadecimal)

[#9127] DEV0 EIA CODE \$

Set the code in hexadecimal, which does not duplicate the existing EIA codes, for the special code "\$"

When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

---Setting range-

0 to FF (hexadecimal)

[#9128] DEV0 EIA CODE!

Set the code in hexadecimal, which does not duplicate the existing EIA codes, for the special code "I

When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

--Setting range

0 to FF (hexadecimal)

[#9201] DEV1 DEVICE NAME

Set the device name corresponding to the device No.

Set a simple name for quick identification

---Setting range-

Use alphabet characters, numerals and symbols to set a name within 3 characters.

【#9202】 DEV1 BAUD RATE

Select the serial communication speed.

0: 19200 (bps)

2: 4800

3: 2400

4.1200

5: 600 6: 300 7:110

[#9203] DEV1 STOP BIT

Select the stop bit length used in the start-stop system.

Refer to "#9204 DEV1 PARITY CHECK". At the output of data, the number of characters is always adjusted to for the parity check.

1: 1 (bit) 2: 1.5 3: 2

【#9204】 DEV1 PARITY CHECK

Select whether to add a parity check bit to the data.

Set this parameter in accordance with the I/O device specifications.

0: Not add a parity bit in I/O mode 1: Add a parity bit in I/O mode

【#9205】 DEV1 EVEN PARITY

Select whether even or odd parity will be used when parity is used. This parameter is ignored when no parity is added.

0: Odd parity

1: Even parity

【#9206】 DEV1 CHR. LENGTH

Select the length of the data bit. Refer to "#9204 DEV1 PARITY CHECK".

0: 5 (bit)

2: 7 (NC connection not supported)

3.8

【#9207】 DEV1 TERMINATR TYP

Select the code to terminate data reading.

0, 3: EOR

1, 2: EOB or EOR

[When M700/700VW display side serial port is selected]

0: No terminator 1: EOR

2: EOB 3: EOB or EOR

【#9208】 DEV1 HAND SHAKE

Select the transmission control method.

No handshaking will be used when a value except 1 to 3 is set. 1: RTS/CTS method

2: No handshaking

3: DC code method

【#9209】 DEV1 DC CODE PRTY

Select the DC code type when the DC code method is selected.

0: Not add parity to DC code (DC3 = 13H) 1: Add parity to DC code (DC3 = 93H)

【#9211】 DEV1 DC2/4 <u>OUTPUT</u>

Select the DC code handling when outputting data to the output device. DC2 / DC4

0: None / None 1: Yes / None

2: None / Yes

3: Yes / Yes

【#9212】 DEV1 CR OUTPUT

Select whether to add the (CR) code just before the EOB (L/F) code during output.

0: Not add

1: Add

User Parameters

【#9213】 DEV1 EIA OUTPUT

Select ISO or EIA code for data output.

In data input mode, the ISO and EIA codes are identified automatically.

0: ISO code output

1: FIA code output

【#9214】 DEV1 FEED CHR.

Set the length of the tape feed to be output at the start and end of the data during tape output

-Setting range

0 to 999 (characters)

[#9215] DEV1 PARITY V Select whether to perform the parity check for the number of characters in a block at the input of data.

At the output of data, the number of characters is always adjusted to for the parity check.

0: Not perform parity V check 1: Perform parity V check

[#9216] DEV1 TIME-OUT (sec)

Set the time out time to detect an interruption in communication.

Time out check will not be executed when set to "0"

-Setting range

0 to 30 (s)

【#9217】 DEV1 DR OFF

Select whether to enable the DR data check in data I/O mode.

0: Enable

1: Disable

[#9218] DEV1 DATA ASCII

Select the code of the output data.

0: ISO/EIA code (Depends on whether #9113, #9213, #9313, #9413 or #9513 EIA

output parameter is set up.)

1: ASCII code

【#9219】 DEV1 INPUT TYPE

Select the mode for input (verification).

0: Standard input (Data from the very first EOB is handled as significant information.

EOBs following the first EOB of the input data are skipped until data other than EOB is input

【#9220】 DEV1 OUT BUFFER

Select the buffer size of the output data which is output to output device using NC side serial port.

If the output device has a transmission error (overrun error), decrease the buffer size with

this parameter

If the buffer size is decreased, output time will prolong according to the size.

0: 250 bytes (default) 1: 1 byte

2: 4 byte

3: 8 byte 4: 16 byte

5: 64 byte

[#9221] DEV1 EIA CODE [

Set the code in hexadecimal, which does not duplicate the existing EIA codes, for the special code " [".

When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

-Setting range

0 to FF (hexadecimal)

[#9222] DEV1 EIA CODE]

Set the code in hexadecimal, which does not duplicate the existing EIA codes, for the special code "

When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

---Setting range

0 to FF (hexadecimal)

【#9223】 DEV1 EIA CODE

Set the code in hexadecimal, which does not duplicate the existing EIA codes, for the special code "#"

When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

---Setting range

0 to FF (hexadecimal)

【#9224】 DEV1 EIA CODE *

Set the code in hexadecimal, which does not duplicate the existing EIA codes, for the special code

When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

-Setting range

0 to FF (hexadecimal)

[#9225] DEV1 EIA CODE =

Set the code in hexadecimal, which does not duplicate the existing FIA codes, for the special code

When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

---Setting range

0 to FF (hexadecimal)

[#9226] DEV1 EIA CODE :

Set the code in hexadecimal, which does not duplicate the existing EIA codes, for the

special code ":".

When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

---Setting range

0 to FF (hexadecimal)

[#9227] DEV1 EIA CODE \$

Set the code in hexadecimal, which does not duplicate the existing EIA codes, for the special code "\$"

When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

-Setting range

0 to FF (hexadecimal)

[#9228] DEV1 EIA CODE!

Set the code in hexadecimal, which does not duplicate the existing EIA codes, for the special code

When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

---Setting range

0 to FF (hexadecimal)

【#9301】 DEV2 DEVICE NAME

Set the device name corresponding to the device No.

Set a simple name for quick identification

---Setting range

Use alphabet characters, numerals and symbols to set a name within 3 characters.

【#9302】 DEV2 BAUD RATE

Select the serial communication speed.

0: 19200 (bps) 1: 9600

2: 4800

3: 2400

4: 1200

5: 600

6: 300 7: 110

[#9303] DEV2 STOP BIT

Select the stop bit length used in the start-stop system.

Refer to "#9304 DEV2 PARITY CHECK". At the output of data, the number of characters is

always adjusted to for the parity check.

1: 1 (bit) 2: 1.5

3.2

[#9304] DEV2 PARITY CHECK

Select whether to add a parity check bit to the data.

Set this parameter in accordance with the I/O device specifications. 0: Not add a parity bit in I/O mode

1: Add a parity bit in I/O mode

[#9305] DEV2 EVEN PARITY

Select whether even or odd parity will be used when parity is used. This parameter is ignored when no parity is added.

0: Odd parity

1: Even parity

【#9306】 DEV2 CHR. LENGTH

Select the length of the data bit.

Refer to "#9304 DEV2 PARITY CHECK".

- 0: 5 (bit)
- 1: 6 2: 7 (NC connection not supported) 3.8

【#9307】 DEV2 TERMINATR TYP

Select the code to terminate data reading.

- 0, 3: EOR 1, 2: EOB or EOR

[When M700/700VW display side serial port is selected]

- 0: No terminator 1: EOR
- 2: EOB
- 3: FOB or FOR

【#9308】 DEV2 HAND SHAKE

Select the transmission control method.

No handshaking will be used when a value except 1 to 3 is set.

1: RTS/CTS method

2: No handshaking

- 3: DC code method

[#9309] DEV2 DC CODE PRTY

Select the DC code type when the DC code method is selected.

- 0: Not add parity to DC code (DC3 = 13H) 1: Add parity to DC code (DC3 = 93H)

[#9311] DEV2 DC2/4 OUTPUT

Select the DC code handling when outputting data to the output device.

- DC2 / DC4
- 0: None / None 1: Yes / None
- 2: None / Yes 3: Yes / Yes

【#9312】 DEV2 CR OUTPUT

Select whether to add the (CR) code just before the EOB (L/F) code during output.

- 0: Not add
- 1: Add

【#9313】 DEV2 EIA OUTPUT

Select ISO or EIA code for data output

In data input mode, the ISO and EIA codes are identified automatically.

- 0: ISO code output 1: EIA code output

【#9314】 DEV2 FEED CHR.

Set the length of the tape feed to be output at the start and end of the data during tape output

- ---Setting range-
 - 0 to 999 (characters)

[#9315] DEV2 PARITY V

Select whether to perform the parity check for the number of characters in a block at the input of data At the output of data, the number of characters is always adjusted to for the parity check.

- Not perform parity V check
 Perform parity V check

【#9316】 DEV2 TIME-OUT (sec)

Set the time out time to detect an interruption in communication. Time out check will not be executed when set to "0".

- ---Setting range
 - 0 to 30 (s)

[#9317] DEV2 DR OFF

Select whether to enable the DR data check in data I/O mode.

- 0: Enable
- 1: Disable

【#9318】 DEV2 DATA ASCII

Select the code of the output data

- 0: ISO/EIA code (Depends on whether #9113, #9213, #9313, #9413 or #9513 EIA
- output parameter is set up.)

 1: ASCII code

【#9319】 DEV2 INPUT TYPE

Select the mode for input (verification).

- 0: Standard input (Data from the very first EOB is handled as significant information
- 1: EOBs following the first EOB of the input data are skipped until data other than EOB is input

【#9320】 DEV2 OUT BUFFER

Select the buffer size of the output data which is output to output device using NC side serial

port.
If the output device has a transmission error (overrun error), decrease the buffer size with this parameter

If the buffer size is decreased, output time will prolong according to the size.

- 0: 250 bytes (default)
 - 1: 1 byte
 - 2: 4 byte
 - 3: 8 byte
 - 4: 16 byte 5: 64 byte

【#9321】 DEV2 EIA CODE [

Set the code in hexadecimal, which does not duplicate the existing EIA codes, for the special code $^{\circ}$ [$^{\circ}$.

When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

-Setting range

0 to FF (hexadecimal)

【#9322】 DEV2 EIA CODE]

Set the code in hexadecimal, which does not duplicate the existing EIA codes, for the special code " 1 ".

When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

---Setting range

0 to FF (hexadecimal)

【#9323】 DEV2 EIA CODE

Set the code in hexadecimal, which does not duplicate the existing EIA codes, for the special code "#"

When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

---Setting range-

0 to FF (hexadecimal)

[#9324] DEV2 EIA CODE *

Set the code in hexadecimal, which does not duplicate the existing EIA codes, for the

When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

---Setting range

0 to FF (hexadecimal)

[#9325] DEV2 EIA CODE =

Set the code in hexadecimal, which does not duplicate the existing EIA codes, for the special code

When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

---Setting range-

0 to FF (hexadecimal)

【#9326】 DEV2 EIA CODE:

Set the code in hexadecimal, which does not duplicate the existing EIA codes, for the special code "

When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

--Setting range-

0 to FF (hexadecimal)

[#9327] DEV2 EIA CODE \$

Set the code in hexadecimal, which does not duplicate the existing EIA codes, for the special code "\$"

When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

---Setting range

0 to FF (hexadecimal)

【#9328】 DEV2 EIA CODE!

Set the code in hexadecimal, which does not duplicate the existing EIA codes, for the special code

When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

---Setting range-

0 to FF (hexadecimal)

【#9401】 DEV3 DEVICE NAME

Set the device name corresponding to the device No.

Set a simple name for quick identification.

---Setting range

Use alphabet characters, numerals and symbols to set a name within 3 characters.

【#9402】 DEV3 BAUD RATE

Select the serial communication speed.

- 0: 19200 (bps) 1: 9600
- 2: 4800
- 3: 2400
- 4. 1200
- 5: 600
- 6: 300 7: 110

[#9403] DEV3 STOP BIT

Select the stop bit length used in the start-stop system

Refer to "#9404 DEV3 PARITY CHECK". At the output of data, the number of characters is always adjusted to for the parity check.

- : 1 (bit)
- 2: 1.5

【#9404】 DEV3 PARITY CHECK

Select whether to add a parity check bit to the data.

Set this parameter in accordance with the I/O device specifications.

- 0: Not add a parity bit in I/O mode 1: Add a parity bit in I/O mode

【#9405】 DEV3 EVEN PARITY

Select whether even or odd parity will be used when parity is used. This parameter is ignored when no parity is added

- 0: Odd parity
- 1: Even parity

【#9406】 DEV3 CHR. LENGTH

Select the length of the data bit.

- Refer to "#9404 DEV3 PARITY CHECK".
 - 0: 5 (bit)
 - 1: 6
 - 2: 7 (NC connection not supported)
 - 3.8

【#9407】 DEV3 TERMINATR TYP

Select the code to terminate data reading. 0, 3: EOR 1, 2: EOB or EOR

- [When M700/700VW display side serial port is selected]
- 0: No terminator
- 1: EOR
- 2. FOR
- 3: FOR or FOR

[#9408] DEV3 HAND SHAKE

Select the transmission control method.

- No handshaking will be used when a value except 1 to 3 is set. 1: RTS/CTS method

 - 2: No handshaking 3: DC code method

【#9409】 DEV3 DC CODE PRTY

Select the DC code type when the DC code method is selected.

- 0: Not add parity to DC code (DC3 = 13H) 1: Add parity to DC code (DC3 = 93H)

【#9411】 DEV3 DC2/4 OUTPUT

Select the DC code handling when outputting data to the output device. DC2 / DC4

- 0: None / None 1: Yes / None
- 2: None / Yes
- 3: Yes / Yes

【#9412】 DEV3 CR OUTPUT

Select whether to add the (CR) code just before the EOB (L/F) code during output. 0: Not add

1: Add

【#9413】 DEV3 EIA OUTPUT

Select ISO or EIA code for data output

- In data input mode, the ISO and EIA codes are identified automatically.

 0: ISO code output

 - 1: EIA code output

【#9414】 DEV3 FEED CHR.

Set the length of the tape feed to be output at the start and end of the data during tape output

---Setting range

0 to 999 (characters)

[#9415] DEV3 PARITY V

Select whether to perform the parity check for the number of characters in a block at the input of data

At the output of data, the number of characters is always adjusted to for the parity check.

0: Not perform parity V check

1: Perform parity V check

[#9416] DEV3 TIME-OUT (sec)

Set the time out time to detect an interruption in communication.

Time out check will not be executed when set to "0"

---Setting range 0 to 30 (s)

【#9417】 DEV3 DR OFF

Select whether to enable the DR data check in data I/O mode

- 1. Disable

【#9418】 DEV3 DATA ASCII

Select the code of the output data.

- SO/EIA code (Depends on whether #9113, #9213, #9313, #9413 or #9513 EIA output parameter is set up.)
- 1: ASCII code

[#9419] DEV3 INPUT TYPE

Select the mode for input (verification).

- 0: Standard input (Data from the very first EOB is handled as significant information.)
- 1: EOBs following the first EOB of the input data are skipped until data other than EOB is input

【#9420】 DEV3 OUT BUFFER

Select the buffer size of the output data which is output to output device using NC side serial

port. If the output device has a data receiving error (overrun error), decrease the buffer size with

this parameter.

If the buffer size is decreased, output time will prolong according to the size.

- 0: 250 bytes (default)
- 1: 1 byte
- 2: 4 bytes
- 3: 8 bytes
- 4: 16 bytes 5: 64 bytes

【#9421】 DEV3 EIA CODE [

Set the code in hexadecimal, which does not duplicate the existing EIA codes, for the special code " [". When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

---Setting range-

0 to FF (hexadecimal)

[#9422] DEV3 EIA CODE]

Set the code in hexadecimal, which does not duplicate the existing EIA codes, for the special code "]

When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

-Setting range-

0 to FF (hexadecimal)

【#9423】 DEV3 EIA CODE

Set the code in hexadecimal, which does not duplicate the existing EIA codes, for the special code

When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

---Setting range

0 to FF (hexadecimal)

[#9424] DEV3 EIA CODE

Set the code in hexadecimal, which does not duplicate the existing EIA codes, for the special code "*".

When output with EIA code, data can be output using the alternate code in which the

special ISO code, not included in EIA, is specified.

---Setting range-

0 to FF (hexadecimal)

[#9425] DEV3 EIA CODE =

Set the code in hexadecimal, which does not duplicate the existing EIA codes, for the special code "

When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

-Setting range

0 to FF (hexadecimal)

【#9426】 DEV3 EIA CODE:

Set the code in hexadecimal, which does not duplicate the existing EIA codes, for the special code

When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

---Setting range

0 to FF (hevadecimal)

[#9427] DEV3 EIA CODE \$

Set the code in hexadecimal, which does not duplicate the existing EIA codes, for the special code "\$".

When output with EIA code, data can be output using the alternate code in which the

special ISO code, not included in EIA, is specified.

---Setting range

0 to FF (hexadecimal)

[#9428] DEV3 EIA CODE!

Set the code in hexadecimal, which does not duplicate the existing EIA codes, for the special code "!"

When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

-Setting range

0 to FF (hexadecimal)

【#9501】 DEV4 DEVICE NAME

Set the device name corresponding to the device No.

Set a simple name for quick identification.

Setting range

Use alphabet characters, numerals and symbols to set a name within 3 characters.

【#9502】 DEV4 BAUD RATE

Select the serial communication speed

0: 19200 (bps) 1: 9600

2: 4800

3: 2400

4: 1200

5: 600

6: 300 7: 110

【#9503】 DEV4 STOP BIT

Select the stop bit length used in the start-stop system.

Refer to "#9504 DEV4 PARITY CHECK". At the output of data, the number of characters is always adjusted to for the parity check.

1: 1 (bit) 2: 1.5

3: 2

【#9504】 DEV4 PARITY CHECK

Select whether to add a parity check bit to the data.

Set this parameter in accordance with the I/O device specifications

0: Not add a parity bit in I/O mode

1: Add a parity bit in I/O mode

【#9505】 DEV4 EVEN PARITY

Select whether even or odd parity will be used when parity is used. This parameter is ignored when no parity is added

0: Odd parity
1: Even parity

[#9506] DEV4 CHR. LENGTH

Select the length of the data bit

Refer to "#9504 DEV4 PARITY CHECK".

0: 5 (bit) 1: 6

2: 7 (NC connection not supported)

【#9507】 DEV4 TERMINATR TYP

Select the code to terminate data reading.

0, 3: EOR

1 2: FOR or FOR

[When M700/700VW display side serial port is selected]

0: No terminator 1. FOR

2: EOB

3: EOB or EOR

【#9508】 DEV4 HAND SHAKE

Select the transmission control method

No handshaking will be used when a value except 1 to 3 is set.

1: RTS/CTS method

2: No handshaking

3: DC code method

[#9509] DEV4 DC CODE PRTY

Select the DC code type when the DC code method is selected. 0: Not add parity to DC code (DC3 = 13H)

1: Add parity to DC code (DC3 = 93H)

[#9511] DEV4 DC2/4 OUTPUT

Select the DC code handling when outputting data to the output device.

DC2 / DC4

0: None / None

1: Yes / None

2: None / Yes 3: Yes / Yes

【#9512】 DEV4 CR OUTPUT

Select whether to add the (CR) code just before the EOB (L/F) code during output.

0: Not add 1: Add

【#9513】 DEV4 EIA OUTPUT

Select ISO or EIA code for data output

In data input mode, the ISO and EIA codes are identified automatically.

0: ISO code output

1: EIA code output

【#9514】 DEV4 FEED CHR.

[#9515] DEV4 PARITY V

Set the length of the tape feed to be output at the start and end of the data during tape output

---Setting range-

0 to 999 (characters)

Select whether to perform the parity check for the number of characters in a block at the input of data

At the output of data, the number of characters is always adjusted to for the parity check.

Not perform parity V check
 Perform parity V check

[#9516] DEV4 TIME-OUT (sec)

Set the time out time to detect an interruption in communication.

Time out check will not be executed when set to "0"

---Setting range-

0 to 30 (s)

【#9517】 DEV4 DR OFF

Select whether to enable the DR data check in data I/O mode.

0: Enable 1: Disable

【#9518】 DEV4 DATA ASCII

Select the code of the output data.

0: ISO/EIA code (Depends on whether #9113, #9213, #9313, #9413 or #9513 EIA

output paramèter is set up.)

1: ASCII code

【#9519】 DEV4 INPUT TYPE

Select the mode for input (verification).

0: Standard input (Data from the very first EOB is handled as significant information.)

1: EOBs following the first EOB of the input data are skipped until data other than EOB

is input.

【#9520】 DEV4 OUT BUFFER

Select the buffer size of the output data which is output to output device using NC side serial port.

port.
If the output device has a transmission error (overrun error), decrease the buffer size with this parameter.

If the buffer size is decreased, output time will prolong according to the size.

- 0: 250 bytes (default)
 - 1: 1 byte
 - 2: 4 byte
 - 3: 8 byte 4: 16 byte
 - 5: 64 byte

[#9521] DEV4 EIA CODE [

Set the code in hexadecimal, which does not duplicate the existing EIA codes, for the special code " [".

When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

---Setting range---

0 to FF (hexadecimal)

【#9522】 DEV4 EIA CODE]

Set the code in hexadecimal, which does not duplicate the existing EIA codes, for the special code "1".

When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

---Setting range--

0 to FF (hexadecimal)

[#9523] DEV4 EIA CODE

Set the code in hexadecimal, which does not duplicate the existing EIA codes, for the special code "#".

When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

---Setting range---

0 to FF (hexadecimal)

[#9524] DEV4 EIA CODE *

Set the code in hexadecimal, which does not duplicate the existing EIA codes, for the special code ***.

When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

---Setting range--

0 to FF (hexadecimal)

[#9525] DEV4 EIA CODE =

Set the code in hexadecimal, which does not duplicate the existing EIA codes, for the special code "=".

When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

---Setting range--

0 to FF (hexadecimal)

【#9526】 DEV4 EIA CODE:

Set the code in hexadecimal, which does not duplicate the existing EIA codes, for the special code ": ".

When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

--Setting range---

0 to FF (hexadecimal)

[#9527] DEV4 EIA CODE \$

Set the code in hexadecimal, which does not duplicate the existing EIA codes, for the special code "\$".

When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

---Setting range--

0 to FF (hexadecimal)

[#9528] DEV4 EIA CODE!

Set the code in hexadecimal, which does not duplicate the existing EIA codes, for the special code "!".

When output with EIA code, data can be output using the alternate code in which the special ISO code, not included in EIA, is specified.

---Setting range---

0 to FF (hexadecimal)

【#9601】 BAUD RATE

Select the rate at which data is transferred.

- 0: 19200 (bps) 1: 9600
- 2: 4800
- 3: 2400
- 4. 1200
- 5: 600
- 6: 300
- 7: 110 8: 38400

[#9602] STOP BIT

Select the stop bit length used in the start-stop system.
Refer to "#9603 PARITY EFFECTIVE". At the output of data, the number of characters is always adjusted to for the parity check.

- 1: 1 (bit) 2: 1.5

3: 2

【#9603】 PARITY EFFECTIVE

Select whether to add the parity bit to the data.

The parameter is set when using a parity bit separately from the data bit.

Set this parameter according to the specifications of input/output device.

0: Not add a parity bit at the input/output

1: Add a parity bit at the input/output

【#9604】 EVEN PARITY

Select odd or even when parity is added to the data. This parameter is ignored when no

- parity is added.
 0: Odd parity
 - 1: Even parity

【#9605】 CHR. LENGTH

Select the length of the data bit.

- Refer to "#9603 PARITY EFFECTIVE".
 - 0: 5 (bit)

 - 1: 6 2: 7 (NC connection not supported) 2. 0

【#9606】 HAND SHAKE

Select the transmission control method.

- (DC code method) should be set for computer link B.
 - 0: No control 1: RTS/CTS method

 - 2: No handshaking
 - 3: DC code method

[#9607] TIME-OUT SET

Set the time-out time at which an interruption of data transfer during data input/output

should be detected "0" means infinite time-out.

- ---Setting range
- 0 to 999 (1/10s)

【#9608】 DATA CODE

【#9609】 LINK PARAM. 1

Set the code to be used for the data description. Refer to "#9603 PARITY EFFECTIVE".

- 0: ASCII code
- 1: ISO code

bit1: DC1 output after NAK or SYN

Select whether to output the DC1 code after the NAK or SYN code is output.

0: Not output the DC1 code.

- 1: Output the DC1 code.

bit7: Enable/disable resetting

Select whether to enable the resetting in the computer link.

- 0: Enable
- 1. Disable

【#9610】 LINK PARAM. 2

Bit 2: Specify the control code parity (even parity for the control code).

Select whether to add an even parity to the control code, in accordance with the I/O device specifications

0: Not add a parity bit to the control code

1: Add a parity bit to the control code

Bit 3: Parity V

Select whether to enable checking of parity V in one block at the input of the data.

0: Disable 1: Enable

【#9611】 Link PARAM. 3

Not used. Set to "0".

【#9612】 Link PARAM. 4

Not used. Set to "0"

【#9613】 Link PARAM. 5

Not used. Set to "0".

[#9614] START CODE

Select the code used to command the first transfer of file data.

This parameter is used for a specific user. Normally set "0".

0: DC1 (11H) 1: BEL (07H)

【#9615】 CTRL. CODE OUT bit 0: NAK output

Select whether to send the NAK code to the host if a communication error occurs in

computer link B.

0: Not output the NAK code 1: Output the NAK code.

bit 1: SYN output

Select whether to send the SYN code to the host if NC resetting or an emergency stop occurs in computer link B.

0: Not output the SYN code.

1: Output the SYN code

bit 3: DC3 output

Select whether to send the DC3 code to the host when the communication ends in computer link B.

Not output the DC3 code.
 Output the DC3 code.

[#9616] CTRL. INTERVAL

Not used. Set to "0".

【#9617】 WAIT TIME

Not used. Set to "0".

【#9618】 PACKET LENGTH

Not used. Set to "0"

【#9619】 BUFFER SIZE

Not used. Set to "0".

[#9620] START SIZE

Not used. Set to "0".

[#9621] DC1 OUT SIZE

Not used. Set to "0"

【#9622】 POLLING TIMER

Not used. Set to "0".

【#9623】 TRANS. WAIT TMR

Not used. Set to "0"

【#9624】 RETRY COUNTER

Not used. Set to "0".

[#9701(PR)] IP addr auto set

The IP address is automatically assigned from the server.

0: Manual setting

1: Automatic setting

(Note) When the automatic setting is selected, "#11005 PC IP address, PC Subnet, PC Gateway" will be invalid.

【#9706】 Host No.

Select the No. of the host to be used from host 1 to host 4.

-Setting range

1 to 4 : Host No.

[#9711] Host1 host name

Set the host computer name. This parameter allows the NC to easily recognize the host computer on the network. Set the host computer's name (name registered in C:windows/hosts) or the IP address.

<Setting example>

For host name: mspc160

For IP address: 150.40.0.111

(Note) Set the host computer's TCP/IP address if communication is not carried out correctly.

-Setting range-

15 characters (alphanumeric) or less

【#9712】 Host1 user name

Set the user name when logging into the host computer.

---Setting range--

15 characters (alphanumeric) or less

【#9713】 Host1 password

Set the password when logging into the host computer.

---Setting range-

15 characters (alphanumeric) or less

【#9714】 Host1 directory

Set the directory name of the host computer

The directory released to the client (NC unit) with the host computer's server is handled as root directory by the NC unit.

---Setting range

31 characters (alphanumeric) or less

[#9715] Host1 host type

Select the type of the host computer.
0: UNIX/PC automatic judgment

1: UNIX 2: PC (DOS)

(Note) When "0" is set, the settings for the following parameters will be invalid.

- #9716 Wrd pos: name

- #9717 Wrd pos: size

- #9718 Wrd pos: Dir

- #9719 Wrd pos: cmnt - #9720 Wrd num: cmnt

【#9716】 Host 1 Wrd pos: name

Set the file name display position (nth word from left) of the list displayed when the ftp command "dir" is executed.

(Note) One word designates a character string divided by one or more spaces.

---Setting range

0 to 100

0: Default value

[#9717] Host 1 Wrd pos: size

Set the size display position (nth word from left) of the list displayed when the ftp command "dir" is executed

(Note) One word designates a character string divided by one or more spaces.

---Setting range-

0 to 100

0: Default value

[#9718] Host 1 Wrd pos: Dir

Set the <DIR> display position (nth word from left) of the list displayed when the ftp command "dir" is executed.

(Note) One word designates a character string divided by one or more spaces.

---Setting range

0 to 100

0: Default value

【#9719】 Host 1 Wrd pos: cmnt

Set the comment (date, time, etc.) display position (nth word from left) of the list displayed when the ftp command "dir" is executed.

(Note) One word designates a character string divided by one or more spaces.

---Setting range

0 to 100

0: Default value

[#9720] Host 1 Wrd num: cmnt

Set the number of words to be displayed as a comment.

(Note) One word designates a character string divided by one or more spaces.

-Setting range

0 to 100 0: Default value

[#9721] Host 1 no total siz

Set whether to display the total number of characters registered in the machining programs

of host1 when displaying the file list.

If there are many files in the directory to be referred to, the list can be updated quickly by setting "1"

0: Display 1: Not display

[#9731] Host2 host name

Set the host computer name

This parameter allows the NC to easily recognize the host computer on the network. Set the host computer's name (name registered in C:\windows\hosts) or the IP address.

<Setting example> For host name: msnc160

For IP address: 150.40.0.111

(Note) Set the host computer's TCP/IP address if communication is not carried out correctly.

-Setting range

15 characters (alphanumeric) or less

【#9732】 Host2 user name

Set the user name when logging into the host computer.

---Setting range-

15 characters (alphanumeric) or less

【#9733】 Host2 password

Set the password when logging into the host computer.

---Setting range-

15 characters (alphanumeric) or less

【#9734】 Host2 directory

Set the directory name of the host computer

The directory released to the client (NC unit) with the host computer's server is handled as

the root directory by the NC unit.

---Setting range-

31 characters (alphanumeric) or less

【#9735】 Host2 host type

Select the type of the host computer.
0: UNIX/PC automatic judgment

1. LINIX

2: PC (DOS)

(Note) When "0" is set, the settings for the following parameters will be invalid.

- #9736 Wrd pos: name

- #9737 Wrd pos: size

- #9738 Wrd pos: Di

- #9739 Wrd pos: cmnt

- #9740 Wrd num: cmnt

Set the file name display position (nth word from left) of the list displayed when the ftp command "dir" is executed.

(Note) One word designates a character string divided by one or more spaces.

---Setting range

0 to 100

0: Default value

[#9737] Host 2 Wrd pos: size

【#9736】 Host 2 Wrd pos: name

Set the size display position (nth word from left) of the list displayed when the ftp command "dir" is executed

(Note) One word designates a character string divided by one or more spaces.

---Setting range

0 to 100

0: Default value

[#9738] Host 2 Wrd pos: Dir

Set the <DIR> display position (nth word from left) of the list displayed when the ftp command "dir" is executed.

(Note) One word designates a character string divided by one or more spaces.

---Setting range

0 to 100 0: Default value

[#9739] Host 2 Wrd pos: cmnt

Set the comment (date, time, etc.) display position (nth word from left) of the list displayed when the ftp command "dir" is executed.

(Note) One word designates a character string divided by one or more spaces.

- ---Setting range---
 - 0 to 100
 - 0: Default value

[#9740] Host 2 Wrd num: cmnt

Set the number of words to be displayed as a comment.

(Note) One word designates a character string divided by one or more spaces.

- ---Setting range
 - 0 to 100
 - 0: Default value

[#9741] Host 2 no total siz

Set whether to display the total number of characters registered in the machining programs of host1 when displaying the file list

If there are many files in the directory to be referred to, the list can be updated quickly by

setting "1". 0: Display

1: Not display

【#9751】 Host3 host name

Set the host computer name

This parameter allows the NC to easily recognize the host computer on the network. Set the host computer's name (name registered in C:\windows\hosts) or the IP address. <Setting example>

For host name: mspc160 For IP address: 150.40.0.111

(Note) Set the host computer's TCP/IP address if communication is not carried out correctly. ---Setting range-

15 characters (alphanumeric) or less

[#9752] Host3 user name

Set the user name when logging into the host computer.

---Setting range-

15 characters (alphanumeric) or less

[#9753] Host3 password

Set the password when logging into the host computer.

-Setting range

15 characters (alphanumeric) or less

[#9754] Host3 directory

Set the directory name of the host computer.
The directory released to the client (NC unit) with the host computer's server is handled as

the root directory by the NC unit.

---Setting range-31 characters (alphanumeric) or less

【#9755】 Host3 host type

Select the type of the host computer 0: UNIX/PC automatic judgment

- 1. LINIX
- 2: PC (DOS)

(Note) When "0" is set, the settings for the following parameters will be invalid.

- #9756 Wrd pos: name
- #9757 Wrd pos: size
- #9758 Wrd pos: Dir
- #9759 Wrd pos: cmnt
- #9760 Wrd num: cmnt

[#9756] Host 3 Wrd pos: name

Set the file name display position (nth word from left) of the list displayed when the ftp command "dir" is executed.

(Note) One word designates a character string divided by one or more spaces.

- ---Setting range
 - 0 to 100
 - 0: Default value

[#9757] Host 3 Wrd pos: size

Set the size display position (nth word from left) of the list displayed when the ftp command "dir" is executed.

(Note) One word designates a character string divided by one or more spaces.

- ---Setting range

 - 0 to 100 0: Default value

[#9758] Host 3 Wrd pos: Dir

Set the <DIR> display position (nth word from left) of the list displayed when the ftp command "dir" is executed.

(Note) One word designates a character string divided by one or more spaces.

- ---Setting range--
 - 0 to 100
 - 0: Default value

[#9759] Host 3 Wrd pos: cmnt

Set the comment (date, time, etc.) display position (nth word from left) of the list displayed when the ftp command "dir" is executed.

(Note) One word designates a character string divided by one or more spaces.

- ---Setting range
 - 0 to 100
 - 0. Default value

[#9760] Host 3 Wrd num: cmnt

Set the number of words to be displayed as a comment.

(Note) One word designates a character string divided by one or more spaces.

- ---Setting range-
 - 0 to 100
 - 0: Default value

[#9761] Host 3 no total siz

Set whether to display the total number of characters registered in the machining programs of host1 when displaying the file list. If there are many files in the directory to be referred to, the list can be updated quickly by

setting "1". 0: Display

- 1: Not display

【#9771】 Host4 host name

Set the host computer name

This parameter allows the NC to easily recognize the host computer on the network. Set the host computer's name (name registered in C:\windows\hosts) or the IP address. <Setting example>

For host name: mspc160

For IP address: 150.40.0.111

(Note) Set the host computer's TCP/IP address if communication is not carried out correctly.

---Setting range

15 characters (alphanumeric) or less

【#9772】 Host4 user name

Set the user name when logging into the host computer.

-Setting range

15 characters (alphanumeric) or less

【#9773】 Host4 password

Set the password when logging into the host computer.

---Setting range-

15 characters (alphanumeric) or less

[#9774] Host4 directory

Set the directory name of the host computer.

The directory released to the client (NC unit) with the host computer's server is handled as the root directory by the NC unit.

-Setting range

31 characters (alphanumeric) or less

[#9775] Host4 host type

Select the type of the host computer.
0: UNIX/PC automatic judgment

- 1: UNIX
- 2: PC (DOS)

(Note) When "0" is set, the settings for the following parameters will be invalid.

- #9776 Wrd pos: name
- #9777 Wrd pos: size
- #9778 Wrd pos: Dir
- #9779 Wrd pos: cmnt
- #9780 Wrd num: cmnt

【#9776】 Host 4 Wrd pos: name

Set the file name display position (nth word from left) of the list displayed when the ftp command "dir" is executed.

(Note) One word designates a character string divided by one or more spaces.

- ---Setting range

 - 0 to 100 0: Default value

【#9777】 Host 4 Wrd pos: size

Set the size display position (nth word from left) of the list displayed when the ftp command "dir" is executed

(Note) One word designates a character string divided by one or more spaces.

- ---Setting range---
 - 0 to 100
 - 0: Default value

[#9778] Host 4 Wrd pos: Dir

Set the <DIR> display position (nth word from left) of the list displayed when the ftp command "dir" is executed.

(Note) One word designates a character string divided by one or more spaces.

- ---Setting range
 - 0 to 100
 - 0: Default value

[#9779] Host 4 Wrd pos: cmnt

Set the comment (date, time, etc.) display position (nth word from left) of the list displayed when the ftp command "dir" is executed.

(Note) One word designates a character string divided by one or more spaces.

- ---Setting range
 - 0 to 100
 - 0: Default value

【#9780】 Host 4 Wrd num: cmnt

Set the number of words to be displayed as a comment.

(Note) One word designates a character string divided by one or more spaces.

- ---Setting range
 - 0 to 100
 - 0: Default value

【#9781】 Host 4 no total siz

Set whether to display the total number of characters registered in the machining programs

Set whether to display the total number of characters registered in the machining program of hosti when displaying the file list. If there are many files in the directory to be referred to, the list can be updated quickly by setting '1',

```

(Note) If the menu No. for "Not display" is set for the main menu, that menu will not be displayed.

[#10801] Notice tel num 1

Set the call-back telephone No. used for one-touch call and operator notification.

Begin with the No. from an area code for domestic call.

Begin with a communication company No. for international call.

Hyphens "-" can be used as a delimiting character.

-Setting range Within 28 characters

1: Edit 2: Check 3: NAVI 5· I/O

[#10802] Comment 1

Set a comment, such as a party's name, for the notification party telephone No.1.

---Setting range Within 20 alphanumerical characters (excluding spaces)

【#10803】 Notice tel num 2

Set the call-back telephone No. used for one-touch call and operator notification. Begin with the No. from an area code for domestic call.

Begin with a communication company No. for international call. Hyphens "-" can be used as a delimiting character.

---Setting range

Within 28 characters

[#10804] Comment 2

Set a comment, such as a party's name, for the notification party telephone No.2.

---Setting range Within 20 alphanumerical characters (excluding spaces)

【#10805】 Notice tel num 3

Set the call-back telephone No. used for one-touch call and operator notification. Begin with the No. from an area code for domestic call.
Begin with a communication company No. for international call.
Hyphens "-" can be used as a delimiting character.

---Setting range---Within 28 characters

【#10806】 Comment 3

Set a comment, such as a party's name, for the notification party telephone No.3.

Setting range Within 20 alphanumerical characters (excluding spaces)

[#10807] Password

Set the password for sharing of machining data

-Setting range-

4 characters (one-byte alphanumeric characters, without space)

[#10808] Customer number

Set the user No. for sharing of machining data

Setting range

Within 8 characters (one-byte alphanumeric characters, without space)

【#10812】 Anshin-net valid

Select whether to enable the Anshin-net function.

- 0: Disable
- 1: Enable

【#10813】 MTBnet enable

Select whether to enable the machine tool builder network system.

- 0: Disable
- 1: Enable
- Standard setting: 0

(Note) Values other than "0" and "1" are invalid.

【#10814】 OP-notice condition

- Select the condition of an NC for delivering an operator notification.

 O: When the "automatic operation is starting" signal turns off. (Notifies the alarm if an alarm occurs, and if not, notifies the completion of machining.)

 1: If the designated "#10971 Complete condition" changes into "#10972 Complete CND num", or the "automatic operation is starting" signal turns off due to an alarm.(Notifies the alarm if an alarm occurs at the change of device condition, and if
 - not, notifies the completion of machining.)

 2: When the "automatic operation is starting" signal turns off due to an alarm.

[#10815] OP-notice mode

Select whether to cancel the mode after delivering an operator notification.

0: Cancel

Not cancel. Cancel the mode by screen operation.

[#19001] Syn.tap(,S)cancel

- 0: Retain the spindle speed (,S) in synchronous tap return 1: Cancel the spindle speed (,S) in synchronous tap return with G80

【#19002】 Zero-point mark

Select the position for displaying the zero point mark in the graphic trace and 2D check.

- Machine coordinates zero point (same as conventional method)
- 1: Workpiece coordinate zero point

[#19003] PRG coord rot type

Select the start point of the initial travel command after program coordinate rotation

- 0: Calculate the end position using the current position on the local coordinate system before rotating, without rotating the start point in accordance with the coordinates rotation.
- 1: Calculate the end position, assuming that the start point rotates in accordance with the coordinates rotation.

[#19004] Tap feedrate limit

Set the upper limit of the cutting feed rate in synchronous tapping.

- ---Setting range--
 - 0 to 1000(mm/rev)

(Note)Setting "0" disables this parameter.

When the commanded cutting feed rate in synchronous tapping exceeds this setting, a program error (P184) will occur.

[#19005] manual Fcmd2 clamp

Set a clamp speed coefficient (%) for manual speed command 2.

The feed rate is clamped at the command feed rate or rapid traverse rate for automatic operation, which was multiplied by this parameter's value

(Note)This setting is valid only for manual speed command 2.

- ---Setting range-
 - 0 to 1000 (%)
 - 0: 100% (Default value)

[#19006(PR)] EOR Disable

Set whether to handle an EOR(%) in machining program as the end of program in automatic operation, graphic check, program transfer to NC memory, program editing, and buffer correction. Tape operation, Computer Link B, and serial input/output are not included

0: An EOR(%) is handled as the end of machining program.

1: An EOR(%) is not handled as the end of machining program. The program will be read to the end of file.

[#19401] G33.n chamfer spd

Set the chamfering speed in C axis interpolation type thread cutting.

-Setting range

1 to 1000000 (mm/min)

【#19405】 Rotary ax drawing

Specify this parameter to draw a path of C axis (rotary axis) according to its rotation in the Specify this parameter to draw a pain or C axis, totarly axis) according to its rotation in the graphic trace and 2D graphic trace. When "#1013 axname" is set to "C", the axis is handled as a rotary axis. By setting this parameter to "C", a rotation path around the Z axis on actual workpiece can

be expressed.

When the Graphic check rotary axis drawing option or Graphic trace rotary axis drawing option is disabled, this parameter is ignored

- C : Enable this function
- 0 : Disable this function
 - (Setting is cleared when "0" is set)

【#19425】 ManualB Std R1

Set a radius used as standard for the rotary axis speed.

When the setting value of #19425 is larger than that of "#19427 ManualB Std R2", #19425 setting will be used as surface speed control standard radius 2: #19427 setting will be used as surface speed control standard radius 1.

---Setting range

0 to 99999.999 (mm)

【#19426】 ManualB Std F1

This sets the rotary axis speed for surface speed control standard radius 1 (ManualB Std R1).

When the setting value of #19426 is larger than that of "#19428 ManualB Std F2", #19426 setting will be used as surface speed control standard speed 2: #19427 setting will be used as surface speed control standard speed 1.

---Setting range

1 to 1000000 (°/min)

【#19427】 ManualB Std R2

Set a radius used as standard for the rotary axis speed.
When the same value is set as "#19425 ManualB Std R1", the surface speed control standard speed 1 (ManualB Std F1) will be selected as the rotary axis speed if the radius is less than that value. The surface speed control standard speed 2 (ManualB Std F2) is selected if larger than the set value.

---Setting range

0 to 99999.999 (mm)

【#19428】 ManualB Std F2

Set the rotary axis speed for surface speed control standard radius 2 (ManualB Std R2).

---Setting range

1 to 1000000 (°/min)

The parameters with "(PR)" requires the CNC to be turned OFF after the settings. Turn the power OFF and ON to enable the parameter settings.

[#1001(PR)] SYS ON System validation setup

Select the existence of PLC axes and part systems.

- 0: Not exist 1: Exist

[#1002(PR)] axisno Number of axes

Set the number of control axes and PLC axes.

A total of 16 axes can be set.

Control axis: 0 to 8

PLC axis: 0 to 6

When set to "0", the number of control axes in the part system will be "0". Do not set the number of control axes of the first part system to "0"

(Note) The setting range differs according to the model.

[#1003(PR)] iunit Input setup unit

Select the input setting value for each part system and the PLC axis. Increments in parameters will follow this selection.

- B : 1 // m
- C: 0.1 µ m
- D: 0.01 μ m (10nm) E: 0.001 μ m (1nm)

[#1004(PR)] ctrl_unit Control unit

Select the control increment for each part system and PLC axis.

Select the increment for the NC internal position data, communication data between the NC and drive unit, and the servo travel data. Although the standard value is "D", set the optimum value according to the series and specification.

- B:1 μm
- C: 0.1 µ m
- D: 0.01 μ m (10nm)
- E: 0.001 μm (1nm)

【#1005(PR)】 plcunit PLC unit

Select the PLC interface setting and display increment.

The PLC interface setting and display increment will follow this specification. Note that the PLC axis will follow "#1003 junit".

- B:1 um
- C: 0.1 u m
- D: 0.01 μ m (10nm) E: 0.001 μ m (1nm)

[#1006(PR)] mcmpunit Machine error compensation unit

Select the machine error compensation setting and display increment

The parameters related to machine error compensation (backlash, pitch error compensation, etc.) and PLC interface (external machine coordinate system compensation)

will follow this selection

- B:1 μm
- C: 0.1 µ m D: 0.01 μ m (10nm)
- E: 0.001 μm (1nm)

[#1007(PR)] System type select System type select

- Select the NC system type. 0: Machining center system (M system)
 - 1: Lathe system (L system)

(Note 1) If the setting value is out of range, M system will be selected.
(Note 2) This parameter is valid only for M700VS/M70V/M70 Series. (M700/M700VW series

doesn't support this parameter.)

[#1010(PR)] srvunit Output unit (servo)

Select the output increment to servo. Although the standard value is "D", set the optimum value according to the series and specification.

- B:1 μm C: 0.1 µ m
- D: 0.01 μ m (10nm)
- E: 0.001 μm (1nm)

[#1013(PR)] axname Axis name

Set each axis' name with an alphabetic character. Use the characters X, Y, Z, U, V, W, A, B or C.

(Note 1) Do not set the same name twice in one part system. The same name which is used in another part system can be set.

(Note 2) The PLC name does not need to be set. (Numbers 1 to 6 are shown as the axis names.)

--Setting range

X,Y,Z,U,V,W,A,B,C

Base Specifications Parameters

[#1014(PR)] incax Increment command axis name

Set the axis name when commanding an incremental value for the axis travel amount. Available alphabets are the same as in "#1013 axname"

(Note 1) Set an alphabet that is different from that of "#1013 axname"

(Note 2) Setting is not required if absolute/incremental specification with axis names is not performed ("#1076 AbsInc" = "0").

---Setting range X, Y, Z, U, V, W, A, B, C

【#1015(PR)】 cunit Program command unit

Set the minimum increment of program travel command.

cunit Travel amount for travel command 1

0: Follow "#1003 iunit

1: 0.0001 mm (0.1 μ m)

10: 0.001 mm (1 μ m) 100: 0.01 mm (10 μ m)

1000: 0.1 mm (100 μ m) 10000: 1.0 mm

If there is a decimal point in travel command, the decimal point position will be handled as 1mm regardless of this setting.

[#1017(PR)] rot Rotational axis

Select whether the axis is a rotary axis or linear axis.

When rotary axis is set, the axis will be controlled with the rotary axis's coordinate system. Set the rotary axis type with "#8213 Rotation axis type".

0: Linear axis

1: Rotary axis

[#1018(PR)] ccw Motor CCW

Select the direction of the motor rotation to the command direction.

- 0: Clockwise (looking from motor shaft) with the forward rotation command
- 1: Counterclockwise (looking from motor shaft) with the forward rotation command

[#1019(PR)] dia Diameter specification axis

Select the command method of program travel amount.

When the travel amount is commanded with the diameter dimensions, the travel distance will be 5mm when the command is 10mm of travel distance.

The travel amount per pulse will also be halved during manual pulse feed.

If diameter is selected, tool length, the wear compensation amount, and the workpiece coordinate offset will be displayed in diameter value. Other parameters concerning length will always be displayed in dameter value. Other parameters concerning length will always be displayed in radius value.

0: Command with travel amount
1: Command with diameter dimension

[#1020(PR)] sp_ax Spindle Interpolation

Select "1" when using the spindle for the contour control of NC axis (C-axis).

0: Servo axis is used for contour control.

Spindle is used for contour control.

[#1021(PR)] mcp_no Drive unit I/F channel No. (servo)

Using a 4-digit number, set the drive unit interface channel No. and which axis in that channel is to be used when connecting a servo drive unit.

[#1022(PR)] axname2 2nd axis name

Set the name of the axis displayed on the screen with two characters. (X1, Z2, etc.) Always use an alphabetic character (A to Z) for the first character.

-Setting range-

A to Z and 1 to 9 (Two digits) (Setting will be cleared when "0" is set)

[#1023(PR)] crsadr Command address during mixed control (cross axis control)

Set the axis name for issuing a command to this axis during mixed control (cross axis control).

--Setting range

A to Z

(Setting will be cleared when "0" is set)

[#1024(PR)] crsinc Incremental command address during mixed control (cross axis control)

Set the axis name for issuing an incremental command to this axis during mixed control (cross axis control).

---Setting range

A to Z

(Setting will be cleared when "0" is set)

[#1025] I_plane Initial plane selection

```
Select the plane to be selected when the power is turned ON or reset.
```

- 0: X-Y plane (G17 command state)
 1: X-Y plane (G17 command state)
- 2: Z-X plane (G18 command state)
- 3: Y-Z plane (G19 command state)

[#1026] base I Base axis I

Set the names of the basic axes that compose the plane

Set the axis name set in #1013 axname".

If all three items ("base_!", "base_!" and "base_K") do not need to be set, such as for 2-axis specifications, input "0", and the parameter will be blank.

Normally, when X, Y and Z are specified respectively for base_I, _J, _K, the following

relation will be established: G17: X-Y

G18: Z-X

G19: V-7

Specify the desired axis name to set an axis address other than above.

-Setting range

Axis names such as X, Y or Z

【#1027】 base_J Base axis J

Set the names of the basic axes that compose the plane. Set the axis name set in "#1013 axname".

Set uite axis haline set in ""hund a Manile" if all three items ("base_I", "base_J" and "base_K") do not need to be set, such as for 2-axis specifications, input "0", and the parameter will be blank. Normally, when X, Y and Z are specified respectively for base_I, _J, _K, the following

relation will be established:

G17: X-Y G18: Z-X

G19: Y-Z

Specify the desired axis name to set an axis address other than above.

---Setting range-

Axis names such as X. Y or Z

[#1028] base_K Base axis K

Set the names of the basic axes that compose the plane.

Set the axis name set in "#1013 axname".

If all three items ("base_I", "base_J" and "base_K") do not need to be set, such as for 2-axis specifications, input "0", and the parameter will be blank.

Normally, when X, Y and Z are specified respectively for base_I, _J, _K, the following

relation will be established:

G17: X-Y

G18: Z-X G19: Y-Z

Specify the desired axis name to set an axis address other than above.

-Setting range

Axis names such as X, Y or Z

【#1029】 aux I Flat axis I

Set the axis name when there is an axis parallel to "#1026 base I".

-Setting range

Axis names such as X. Y or Z

[#1030] aux_J Flat axis J

Set the axis name when there is an axis parallel to "#1027 base_J".

---Setting range--Axis names such as X, Y or Z

[#1031] aux_K Flat axis K

Set the axis name when there is an axis parallel to "#1028 base K".

---Setting range-

Axis names such as X, Y or Z

[#1037(PR)] cmdtyp Command type

Set the G code list and compensation type for programs.

: List1(for M) Type A (one compensation amount for one compensation No.)

Type B (shape and wear compensation amounts for one comp. No.) Type C (shape and wear compensation amounts for one comp. No.) 2: List1(for M) 3 : List2(for L)

4 : List3(for L) Ditto

5 : List4(for special L) 6 : List5(for special L) Ditto Ditto

7 : List6(for special L) Ditto

8 : List7(for special L) 9 : List8(for M) Ditto

M2 form at type A Type A (one compensation amount for one compensation No.)

: List8(for M) M2 form at type B Type B (shape and wear compensation amounts for one compensation No.) 10 · List8(for M)

There are some items in the specifications that can be used or cannot be used according to

the value set in this parameter. The file structure may also change depending on the compensation data type.

[#1038] plcsel Ladder selection

Not used. Set to "0".

Base Specifications Parameters

[#1039(PR)] spinno Number of spindles

Select the number of spindles.

0: No spindle 1 to 6: One to six spindles

(Note) The setting range differs according to the model.

[#1040(PR)] M_inch Constant input (inch)

Select the unit system for setting and display regarding machine parameter and PLC interface's position, length and speed.

0: Metric system

1: Inch system

【#1041(PR)】 I_inch Initial state (inch)

Select the unit system for the program travel amount when the power is turned ON or reset and for position display.

0: Metric system

1: Inch system

(Note) The units of the following data are converted by "#1041 I_inch".

- Command unit at power ON and reset (Inch/metric command mode)

But under the following conditions, the unit will follow G20/G21 command modal even at reset

When reset modal is retained ("#1151 rstint"="0")

- When G code group 06 reset modal is retained ("#1210 RstGmd/bit5" ON)
- Unit system for position display (counter, user parameter, tool, work offset)
- User parameter I/O unit
- Parameter unit of user parameters concerning length and speed
- Arc error parameter (#1084 RadErr)
- PLC interface unit related to function manual arc feed

[#1042(PR)] pcinch PLC axis command (inch)

Select the unit system for the commands to the PLC axis.

0: Metric system

1: Inch system

[#1043] lang Select language displayed

Select the display language 0: English (Standard)

1: Japanese (Standard)

11: German (Option) 12: French (Option)

13: Italian (Option)

14: Spanish (Option) 15: Traditional Chinese (Option)

16: Korean (Option)

17: Portuguese (Option) 18: Dutch (Option)

19: Swedish (Option)

20: Hungarian (Option) 21: Polish (Option)

22: Simplified Chinese (Option)

23: Russian (Option) 24: Turkish (Option)

25: Czech (Option)

(Note) A language which can be displayed is different according to each series.

[#1044(PR)] auxno MR-J2-CT Connections

Set the number of MR-J2-CTs connected.

(Note) The number of MR-J2-CTs possible to connect and setting range are different according to the model.

Check the specifications of each series.

[#1050(PR)] MemPrg

Not used. Set to "0"

[#1051(PR)] MemTol Tool compensation memory common for part systems

0: Tool compensation memory separate for part systems 1: Tool compensation memory common for part systems

[#1052(PR)] MemVal No. of common variables shared in part system designation

0: Common variables common for part systems (number fixed)

#100 - : Per part system #500 - : Common for part systems

1: Common variables common for part systems (number designation)

#100 - : Designate with V1comN #500 - : Designate with V0comN

(Note) When this parameter is changed, the file system will be changed after the power is turned ON

So always execute format.

The new format will be enabled after turning the power ON again.

Setting order

(1) MemVal changeover -> (2) Turn power ON again -> (3) Format -> (4) Turn power ON

Base Specifications Parameters

[#1061(PR)] intabs Manual ABS updating

Select whether to update the absolute position data during automatic handle interrupt. This parameter is enabled only when "#11451_abs" is set to "1". 0: Do not update (coordinate system shifted the amount of the interruption)

- Update (same coordinates as when interrupt did not occur will be applied)

[#1062] T_cmp Tool compensation function

Select whether the tool length compensation and wear compensation are enabled during 1 command execution.

0: Tool length compensation enable Wear compensation enable Tool length compensation enable
 Tool length compensation disable
 Tool length compensation disable Wear compensation disable Wear compensation enable Wear compensation disable

[#1063] mandog Manual dog-type

Select the manual reference position return method for the second return (after the

coordinate system is established) and later. The initial reference position return after the power ON is performed with dog-type return,

and the coordinate system will be established.
(This setting is not required when the absolute position detection is used.)

0: High speed return 1: Dog-type

[#1064(PR)] svof Error correction

Select whether to correct the error when the servo is OFF.

- 0: Not correct the error
- 1: Correct the erro

[#1068(PR)] slavno Secondary axis number

Set the axis number of the secondary axis in synchronous control

The axis number is an NC number excluding the spindle and PLC axis.

Two or more secondary axes cannot be set for one primary axis.

This parameter cannot be set for a secondary axis.

When using the multi-part system, the relation of the primary axis and secondary axis cannot extend over part systems.

0: No secondary axis

1 to 16: First to sixteenth axis

[#1069] no_dsp Axis with no counter display

Select whether to display the axis counter or not.

This setting is enabled on the counter display screen (relative position counter, etc.).

0: Display

1: Not display

[#1070] axoff Axis removal

Select whether to enable or disable axis removal control.

- 0: Disable 1: Enable

[#1072] chop_ax Chopping axis

Select the chopping axis

- 0: Non-chopping axis
- 1: Chopping axis

[#1073] I_Absm Initial absolute setting

Select the mode (absolute or incremental) at turning ON the power or reset.

- 0: Incremental setting
- 1: Absolute setting

[#1074] I_Sync Initial synchronous feed

Select the feedrate mode at turning ON the power or reset.

- 0: Asynchronous feed (feed per minute)
- 1: Synchronous feed (feed per revolution)

[#1075] I_G00 Initial G00

Select the linear command mode at turning ON the power or reset.

0: Linear interpolation (G01 command state)

[#1077] radius Incremental command for diameter specification axis

1: Positioning (G00 command state)

[#1076] Absinc ABS/INC address (for L system only)

Select the command method for the absolute and incremental commands

- 0: Use G command for the absolute and incremental commands.

 Use axis name for the absolute and incremental commands.

(The axis name in "#1013 axname" will be the absolute command, "#1014 incax" will be the incremental command.)

When "1" is selected, using two axis names, one each for the absolute and incremental commands, allows to issue the absolute and incremental commands appropriately to an axis

Select whether the incremental command of the diameter specification axis ("#1019 dia" is set to "1") uses the diameter value or radius value.

0: Diameter value

- 1: Radius value

Base Specifications Parameters

[#1078] Decpt2 Decimal point type 2

Select the increment of position commands that do not have a decimal point.

0: Minimum input command unit (follows "#1015 cunit")

1: 1mm (or 1inch) unit (For the dwell time, 1s unit is used.)

[#1079] F1digt Validate F1 digit

Select the F command method.

Direct numerical command (command feedrate during feed per minute or rotation)
 1: 1-digit code command (feedrate set with "#1185 spd F1" to "#1189 spd F5")

[#1080] Dril Z Specify boring axis (for M system only)

Select a fixed cycle hole drilling axis

0: Use an axis vertical to the selected plane as hole drilling axis.

Use the Z axis as the hole drilling axis regardless of the selected plane.

[#1081] Gmac_P Give priority to G code parameter

Select the G code priority relationship during the macro call with G command.

0: Priority is on G code used in the system

1: Priority is on registered G code for call

[#1082] Geomet Geometric

Select the type of geometric to use

- 0: Not use 1: Use only geometric I 2: Use geometric I and IB

With geometric, specific address codes are used for exclusive meanings. Thus, if A or C is used for the axis name or 2nd miscellaneous command code, the A used for the axis name may function as the geometric's angle designation. Pay special attention to axis names, etc., when using this function.

【#1084】 RadErr Arc error

Set the tolerable error range when the end point deviates from the center coordinate in the circular command

-Setting range

0 to 1.000 (mm)

[#1085] G00Drn G00 dry run

Select whether to apply dry run (feed at manual setting speed instead of command feedrate) to the G00 command.

0: Not apply to G00. (move at rapid traverse rate)

1: Apply to G00. (move at manual setting speed)

[#1086] G0Intp G00 non-interpolation

Select the G00 travel path type

0: Move linearly toward the end point. (interpolation type)

1: Move to the end point of each axis at the rapid traverse feedrate for each axis. (noninterpolation)

(Note) If this parameter is set to "1", neither of the following functions will be available: rapid traverse constant inclination acceleration/deceleration and rapid traverse constant inclination multi-step acceleration/deceleration.

[#1087] G96_G0 Constant surface speed control by rapid traverse feed command

Select how to handle the surface speed for the G00 command when using the constant surface speed control function.

0: Calculate the surface speed constantly even during G00 movement

1: Calculate the surface speed at the block end point in the G00 command

[#1088] G30SL Disable G30 soft limit

Select how to handle the soft limit during G30 (2nd reference position return).

0: Enable

1: Disable

[#1091] Mpoint Ignore middle point

Select how to handle the middle point during G28 and G30 reference position return.

0: Pass the middle point designated in the program and move to the reference position

1: Ignore the middle point designated in the program and move straight to the reference position.

[#1092] Tchg _A Replace tools for additional axis

Select the movement of the additional axis at the tool change position return command.

0: The additional axis will not move

1: After the standard axis returns, the additional axis will also return to the tool change position

[#1093] Wmvfin Synchronization between part systems method

Select the timing of synchronization between part systems when using the multi-part

When the travel command is found in the synchronization command (!, M) block:

0: Synchronize before executing travel command

1: Synchronize after executing travel command

[#1094] TI_SBK Select life count for single block (for L system only)

Select whether to count the data units to be used for single block operation when using the tool life management II function (L system)

- 0: Not count
- 1: Count

[#1095] T0tfof TF output

Select how to handle TE for T00 command

- 0: TF will be output
- 1: TF wont be output

[#1096(PR)] T_Ltyp Tool life management type

Select the tool life management type

- 1: Life management i
 - In this type, how long and how many times the program commanded tool is used are accumulated to monitor the usage state.
 - 2: Life management II

This method is the same as tool life management I, but with the spare tool selection function.

A spare tool is selected from a group of tool commands commanded in the program. Tool compensation (tool length compensation and tool radius compensation) is carried out for the selected tool

3: Life management III (for M system only)

The usage time, frequency of use or the wear amount of the tool which is designated by the program is accumulated, and the tool usage state is monitored.

by the program a december 3. It is not managed by the group number.
(Note) When "3" is set for the L system, the Life management I is selected.

[#1097] Tldigt Tool wear compensation number 1-digit command

Select the number of digits of the tool wear compensation No. in the T command.

- 0: The 2 high-order digits are the tool No., and the 2 low-order digits are the wear compensation No.
- 1: The 3 high-order digits are the tool No., and the 1 low-order digit is the wear compensation No

This parameter will be fixed to "0" when tool life management II is selected.

[#1098] Tino. Tool length offset number

Select the number of digits of the tool length compensation No. in the T command

- 0: The 2 or 3 high-order digits are the tool No.
- The 2 or 1 low-order digits are the tool length compensation and wear compensation Nos
- 1: The 2 or 3 high-order digits are the tool No. and tool length compensation Nos. The 2 or 1 low-order digits are the wear compensation No.

[#1099] Treset Cancel tool compensation amount

Select how to handle the tool compensation vector when resetting the system.

- 0: Clear the tool length and wear compensation vectors when resetting
- Hold the tool length and wear compensation vectors when resetting

When the values are cleared, the compensation will not be applied. So the axis will be shifted by the compensation amount in the next compensation operation. When the values are kept, the compensation will be applied, so the axis will shift the differential amount of the compensation amount in the next compensation operation.

[#1100] Tmove Tool compensation

Select when to perform tool length compensation and wear compensation.

- 0: Compensate when T command is executed.
 - 1: Superimpose and compensate with the travel command in the block where the T command is located. If there is no travel command in the same block, compensation will be executed after the travel command is superimposed in the next travel command block.
 - 2: Compensate the wear amount when the T command is executed. Superimpose and compensate the tool length compensation amount with the travel command in the same block. If there is no travel command in the same block, compensation will be executed after the travel command is superimposed in the next travel command block

[#1101] Tabsmv Tool compensation method

Select the type of travel command when "#1100 Tmove" is set to "1" or "2".

- Compensate regardless of the travel command type
 Compensate only at the travel command in the absolute command

[#1102] tlm Manual tool length measuring system (for L system only)

Select the measurement method for manual tool measurement I.

- 0: Align tool with basic point
- 1: Input measurement results

(Note) Interpreted as "0" when other than "0" or "1" is set.

[#1103] T_Life Validate life management

Select whether to use the tool life management.
0: Not use
1: Use

Base Specifications Parameters

[#1104] T_Com2 Tool command method 2

Select how to handle the tool command in the program when "#1103 T Life" is set to "1".

0: Handle the command as group No.

1: Handle the command as tool No.

(Note) In the case of the tool life management III, the program tool command will be handled as the tool No. regardless of the setting.

[#1105] T Sel2 Tool selection method 2

Select the tool selection method when "#1103 T_Life" is set to "1".

0: Select in order of registered No. from the tools used in the same group.

1: Select the tool with the longest remaining life from the tools used or unused in the same group

[#1106] Tcount Life management (for L system only)

Select the input method when address N is omitted in inputting the data (G10 L3 command) for tool life management function II.

Time specified input
 Number of times specified input

[#1107] Tllfsc Split life management display screen (for L system only)

Set the number of groups to be displayed on the tool life management II (L system) screen.

0: Displayed group count 1, maximum number of registered tools: 16

1: Displayed group count 2, maximum number of registered tools: 8

2: Displayed group count 4, maximum number of registered tools: 4

[#1108] TirectM Life management re-count M code (for L system only)

Set the M code for tool life management II (L system) re-count.

--Setting range

0 to 99

[#1109] subs M Validate alternate M code

Select the user macro interrupt with the substitute M code.

0: Disable alternate M code

1: Enable alternate M code

[#1110] M96_M M96 alternate M code

Set an M code to replace M96 when "#1109 subs_M" is set to "1".

-Setting range

3 to 97 (excluding 30)

[#1111] M97_M M97 alternate M code

Specify an M code to replace M97 when #1109 subs M is set to 1.

---Setting range

3 to 97 (excluding 30)

[#1112(PR)] S_TRG Validate status trigger method

Select the enable conditions for the user macro interrupt signal (UIT).

0: Enable when interrupt signal (UIT) turns ON

1: Enable when interrupt signal (UIT) is ON

【#1113(PR)】 INT_2 Validate interrupt method type 2

Select the performance after user macro interrupt signal (UIT) input.

0: Execute interrupt program without waiting for block being executed to end

Execute interrupt program after completing block being executed

[#1114] mcrint Macro argument initialization

Select whether to clear statements other than specified arguments by macro call.

Also select whether to clear local variables by power-ON and resetting. Clear the non-specified arguments by macro call.

1: Hold non-specified arguments by macro call

2: Hold non-specified arguments by macro call, and clear local variables by power-ON and resetting

[#1115] thwait Waiting for thread cutting

Set the queue number during screw thread cutting when chamfering is disabled.

---Setting range-

0 to 99 (Approx. 4 ms) Standard setting value: 4

[#1116] G30SLM Invalidate soft limit (manual operation)

Enable this function when disabling the soft limit check function at the second to fourth reference position return.
0: Enable soft limit function
1: Disable soft limit function

【#1117(PR)】 H_sens

Select the handle response mode during handle feed.

0: Standard

1: High-speed

Base Specifications Parameters

[#1118] mirr_A Select how to set up the length of tools on cutter tables (opposed tables) (for L system only)

- Select one of the following two methods:
 Set the current length of tools on each facing turret.
- Set a value, assuming that the tools on each facing turret are in the same direction as that
 of those on the base turret.
 - Current length of the tools on each facing turret
 - Value, assuming that the tools on each facing turret are in the same direction as that
 of those on the base turret

[#1119] Tmiron Select the mirror image of each facing turret with T command (for L system only)

Select whether to enable the mirror image of each facing turret with the T command.

- 0: Disable
- 1: Enable

[#1120(PR)] TofVal Change macro variable

Select whether to change the macro variable (tool offset) numbers for shape compensation and wear compensation.

- 0: Not change (Conventional specification)
- 1: Change the shape and wear compensation variable numbers each for X, Z, and R

[#1121] edlk_c Edit lock C

Select the edit lock for program Nos. 9000 to 9999 in memory.

- Editing possible
 Editing prohibited. The file cannot be opened.

(Note) If "#1122" is set to "1" or "2", "1" will be set in "#1121" when the power is turned ON.

[#1122(PR)] pglk_c Program display lock C

Select whether to prohibit the program display and search for program Nos. 9000 to 9999 in Dellett Windows (F.).

0: Program display and search is possible

1: Program display is impossible. Search is possible.

2: Program display and search is impossible

(Note) If "#1122" is set to "1" or "2", "1" will be set in "#1121" when the power is turned ON

[#1123] origin Origin set prohibit

Select whether to use the origin set function.

- 0: Use 1: Not use

[#1124] ofsfix Fix tool compensation No.

Select how to handle the compensation No. when the input key is pressed on the tool compensation screen.

- 0: Increment the compensation No. by 1 (Same as general parameters)
- 1: # compensation No. does not change

When setting in sequence, "0" is handier. When changing and setting repeatedly while adjusting one compensation value, "1" is handier

[#1125] real_f Actual feedrate display

Select the feedrate display on the monitor screen.

- Command speed
 Actual travel feedrate

[#1126] PB_G90 Playback G90 Select the method to command the playback travel amount in the playback editing.

- 0: Incremental value
- 1: Absolute value

[#1127] DPRINT DPRINT alignment

Select the alignment for printing out with the DPRINT function.

- 0: No alignment, output s printed with left justification
- 1: Align the minimum digit and output

[#1128] RstVCI Clear variables by resetting

Select how to handle the common variables when resetting.

- 0: Common variables won't change after resetting
- The following common variables will be cleared by resetting:
 #100 to #149 when 100 sets of variables are provided.
 #100 to #199 when 200 sets or more of variables are provided.

[#1129] PwrVCI Clear variables by power-ON

Select how to handle the common variables when the power is turned ON.

- to The common variables are in the same state as before turning the power OFF.

 1: The following common variables will be cleared when the power is turned ON:
 #100 to #149 when 100 sets of variables are provided.

#100 to #199 when 200 sets or more of variables are provided.

Base Specifications Parameters

[#1130] set_t Display selected tool number

Select the tool command value display on the POSITION screen.

Display T-modal value of program command
 Display Tool No. sent from PLC

[#1132] brightness

Select the brightness of display unit.

- High brightness (in bright state)
 Medium brightness
- -1: Low brightness (in dim state)

(Note) This setting is valid only for M700VW/M700VS/M70V/M70 Series.

Set this to "0" for M700 series display as it has no brightness control function.

【#1133】 ofsmem

Not used. Set to "0".

[#1134] LCDneg

Not used. Set to "0"

【#1135】 unt_nm Unit name

Set the unit name

Set with 4 or less characters consisting of both alphabets and numbers.

If "0" is set, the unit name won't be displayed.

-Setting range

4 or less characters consisting of both alphabets and numbers

【#1136】 optype

Not used. Set to "0".

[#1137] Cntsel

Not used. Set to "0".

【#1138】 Pnosel

Not used. Set to "0".

[#1139] edtype

Not used. Set to "0"

[#1140] Mn100 M code number

Set the first number of M code that corresponds to the setup Nos, from 100 to 199.

---Setting range

0 to 99999999

[#1141] Mn200 M code number

Set the first number of M code that corresponds to the setup Nos. from 200 to 299.

Setting range

0 to 99999999

[#1142] Mn300 M code number

Set the first number of M code that corresponds to the setup Nos. from 300 to 399.

---Setting range-

0 to 99999999

[#1143] Mn400 M code number

Set the first number of M code that corresponds to the setup Nos. from 400 to 499.

---Setting range

0 to 99999999

[#1144] mdlkof MDI setup lock

Select whether to enable MDI setting in non-MDI mode.

0: Disable MDI setting

1: Enable MDI setting

【#1145】 I_abs Manual ABS parameter

command

Select how to handle the absolute position data during automatic handle interrupt. 0: Absolute position data will be renewed if manual ABS switch is ON. If it is OFF, data

won't be renewed.

1: Follow the "intabs" state when "#1061 intabs" is enabled

【#1146】 Sclamp Spindle rotation speed clamp function

Select how to handle the spindle rotation speed clamp function with the G92S command. 0: G92S command is handled as a clamp command only in the G96 state (during

constant surface speed control).
G92S will be handled as normal S command in G97 state (constant surface speed

OFF 1: The S command in the same block as G92 is constantly handled as a clamp

Base Specifications Parameters

[#1147] smin_V Minimum spindle rotation speed clamp type

Specify the type of spindle min. rotation speed clamp value.

0: Rotation speed setting

1: Output voltage coefficient setting

Set "#3023 smini" according to this type setting.

[#1148] I_G611 Initial high precision

Set the high accuracy control mode for the modal state when the power is turned ON.

0: G64 (cutting mode) at power ON
1: G61.1 (high-accuracy control mode) at power ON

[#1149] cireft Arc deceleration speed change

Select whether to decelerate at the arc entrance or exit.

0: Not decelerate 1: Decelerate

[#1151] rstint Reset initial

Select whether to initialize (power ON state) the modals by resetting.

0: Not initialize modal state

1: Initialize modal state

[#1153] FixbDc Hole bottom deceleration check

Select whether to perform a deceleration check or in-position check at the hole bottom in a hole drilling cycle. This parameter is enabled only for a hole drilling cycle in which no dwell command can be issued at the hole bottom.

Perform no deceleration check and in-position check

1: Perform deceleration check

2: Perform in-position check

【#1154(PR)】 pdoor

Not used. Set to "0".

[#1155] DOOR_m

Not used. Set to "100".

-Setting range-

100

【#1156】 DOOR s

Not used. Set to "100".

---Setting range 100

[#1157] F0atrn

Not used. Set to "0".

[#1158] F0atno

Not used. Set to "0".

[#1163(PR)] No rio RIO connection detection invalid

Select whether to enable or disable RIO connection detection

0: Enable 1: Disable

If your I/O consists of only cards such as CC-LINK, setting this parameter to "1" will avoid the RIO communication cutoff alarm.

[#1164(PR)] ATS Automatic tuning function

Select whether to enable or disable the automatic tuning function

0: Disable

1: Enable

(Note) Enable this parameter when using MS Configurator.

[#1166] fixpro Fixed cycle editing

Select a type of program dealt on the edit/program list/data in/out screen, general program fixed cycle, or machine tool builder macro program.

O: General programs can be edited, etc.
T: Fixed cycles can be edited, etc.

Password No.: The machine tool builder macro programs can be edited, etc.

---Setting range

0 to 99999999

【#1167】 e2rom

Not used. Set to "0"

[#1168] test Simulation test

Select the test mode for the control unit.

In the test mode, test is performed with a hypothetical reference position return complete even though the real reference position return hasn't been completed. This is limited to test operation of the control unit itself, and must not be used when the machine is connected.

Normal operation mode
 Test mode

[#1169] part system name Part system name

Set the name of each part system

This must be set only when using multi-part system

This name will be displayed on the screen only when the part systems must be identified. Use a max, of four alphabetic characters or numerals.

-Setting range

A max. of four alphabetic characters or numerals.

[#1170] M2name Second miscellaneous code

Set this address code when using the 2nd miscellaneous command. Set an address with A B or C that is not used for "#1013 axname" or "#1014 incax".

---Setting range-

A, B, C

[#1171] taprov Tap return override

Set the tap return override value for the synchronous tapping. When "0" is set, it will be regarded as 100%.

---Setting range-

0 to 100 (%)

[#1172] tapovr Tap return override

Set the override value when leaving the tap end point in the synchronous tapping cycle. When "0" is set, 100 % is applied for the operation.

---Setting range-

0 to 999 (%)

[#1173] dwlskp G04 skip condition

Set the skip signal for ending the G04 (dwell) command.

PLC interface input signal Skip3 Skip2 Skip1

0 : 1 : 2: 3: 4: 5: 6:

(*: Enable -: Disable)

【#1174】 skip_F G31 skip speed

Set the feedrate when there is no F command in the program at G31 (skip) command.

-Setting range

1 to 999999 (mm/min)

[#1175] skip1 G31.1 skip condition

Designate the skip signal in multi-step skip G31.1. The setting method is same as "#1173".

[#1176] skip1f G31.2 skip speed

Set the skip feedrate in multi-step skip G31.1.

---Setting range

1 to 999999 (mm/min)

[#1177] skip2 G31.2 skip condition

Set the skip signal in multi-step skip G31.2.

The setting method is same as "#1173"

[#1178] skip2f G31.2 skip speed

Set the skip signal in multi-step skip G31.2.

---Setting range

1 to 999999 (mm/min)

[#1179] skip3 G31.3 skip condition

Set the skip signal in multi-step skip G31.3

The setting method is same as "#1173"

[#1180] skip3f G31.3 skip speed

Set the skip signal in multi-step skip G31.3.

---Setting range-

1 to 999999 (mm/min)

[#1181] G96_ax Constant surface speed axis

Select the axis to be targeted for constant surface speed control.

0: Program setting will be disabled, and the axis will always be fixed to the 1st axis 1: 1st axis

2: 2nd axis

3: 3rd axis

8: 8th axis

However, when set to other than "0", the priority will be on the program setting.

[#1182] thr_F Thread cutting speed

Set the screw cut up speed when not using chamfering in the thread cutting cycle.

Cutting feed clamp feedrate
 to 60000 mm/min: Setting feedrate

---Setting range 0 to 60000 (mm/min)

[#1183] clmp_M M code for clamp

Set the M code for C axis clamp in hole drilling cycle.

---Setting range

0 to 99999999

[#1184] clmp_D Dwelling time after outputting M code for unclamp

Set the dwell time after outputting the M code for C axis unclamp in hole drilling cycle

-Setting range

0.000 to 99999.999 (s)

[#1185] spd_F1 F1 digit feedrate F1

Set the feedrate for the F command in the F 1-digit command ("#1079 F1digit" is set to "1")

Feedrate when F1 is issued (mm/min)
When "#1246 set08/bit6" is set to "1" and F1-digit feed is commanded, the feedrate can be increased/decreased by operating the manual handle.

---Setting range

0 to 1000000 (mm/min)

[#1186] spd_F2 F1 digit feedrate F2

Set the feedrate for the F command in the F 1-digit command ("#1079 F1digit" is set to "1").

Feedrate when F2 is issued (mm/min)

When "#1246 set08/bit6" is set to "1" and F 1-digit feed is commanded, the feedrate can be increased/decreased by operating the manual handle.

---Setting range

0 to 1000000 (mm/min)

[#1187] spd_F3 F1 digit feedrate F3

Set the feedrate for the F command in the F 1-digit command ("#1079 F1digit" is set to "1").

Feedrate when F3 is issued (mm/min)
When "#1246 set08/bit6" is set to "1" and F1-digit feed is commanded, the feedrate can be increased/decreased by operating the manual handle.

-Setting range

0 to 1000000 (mm/min)

[#1188] spd_F4 F1 digit feedrate F4

Set the feedrate for the F command in the F 1-digit command ("#1079 F1digit" is set to "1") Feedrate when F4 is issued (mm/min)

When "#1246 set08/bit6" is set to "1" and F 1-digit feed is commanded, the feedrate can be

increased/decreased by operating the manual handle.

---Setting range

0 to 1000000 (mm/min)

[#1189] spd_F5 F1 digit feedrate F5

Set the feedrate for the F command in the F 1-digit command ("#1079 F1digit" is set to "1"). Feedrate when F5 is issued (mm/min)
When "#1246 set08/bit6" is set to "1" and F1-digit feed is commanded, the feedrate can be

increased/decreased by operating the manual handle.

---Setting range

0 to 1000000 (mm/min)

[#1190(PR)] s_xcnt Validate inclined axis control (for L system only)

Select whether to enable or disable inclined axis control. 0: Disable inclined axis control

Enable inclined axis control

[#1191(PR)] s_angl Inclination angle (for L system only)

Set the inclination angle (θ).

(Note) When set to "0", the angle determined by three-side setting will be applied.

---Setting range

-80,000 to 80,000 (°)

[#1192(PR)] s_zrmv Compensation at reference position return (for L system only)

Select whether to perform compensation for the base axis corresponding to the inclined axis at reference position return

0: Perform compensation

1: Not perform compensation

[#1193] inpos Deceleration check method 1/ Validate in-position check

The definitions are changed with the setting of "#1306 InpsTvp Deceleration check

specification type

<When Deceleration check method 1 is selected> Select the deceleration check method for G0.

Command deceleration check

1: In-position check

<When Deceleration check method 2 is selected>

Select the deceleration confirmation method for the positioning or cutting command.

0: G0, G1+G9 Command deceleration check 1: G0. G1+G9 In-position check

[#1194] H_acdc Time constant 0 for handle fee

Select the time constant for manual handle feed. 0: Use time constant for G01 1: Time constant 0 (step)

[#1195] Mmac Macro call for M command

Select whether to enable or disable M command macro call of user macro.

0: Disable

1: Enable

[#1196] Smac Macro call for S command

Select whether to enable or disable S command macro call of user macro.

0. Disable 1: Enable

[#1197] Tmac Macro call for T command

Select whether to enable or disable T command macro call of user macro.

0: Disable

1: Enable

[#1198] M2mac Macro call with 2nd miscellaneous code

Select whether to enable or disable 2nd miscellaneous command macro call of user macro

0: Disable 1: Enable

[#1199] Sselect Select initial spindle control

Select the initial condition of spindle control after power is turned ON.

0: 1st spindle control mode (G43.1

1: Selected spindle control mode (G44.1)

2: All spindle simultaneously control mode (G47.1)

(Note) Spindle No. when G44.1 is commanded is selected with "#1534.SpG44.1"

[#1200(PR)] G0 acc Validate acceleration and deceleration with inclination angle constant

Select the acceleration and deceleration type when a rapid traverse command is issued.

O: Acceleration and deceleration with constant time (conventional type)

1: Acceleration and deceleration with a constant angle of inclination

(Note) When rapid traverse constant inclination multi-step acceleration/deceleration is

valid, this parameter will be invalid.

[#1201(PR)] G1_acc Validate acceleration and deceleration with inclination constant G1

Select the acceleration and deceleration type when a linear interpolation command is issued

Acceleration and deceleration with constant time (conventional type)

1: Acceleration and deceleration with a constant angle of inclination

[#1202] mirofs Distance between facing turrets (for L system only)

Set the distance between tools (edges) (between facing turrets).

-Setting range

0 to 99999.999 (mm)

[#1203] TmirS1 Select turrets as facing turrets with T command (for L system only)

Select the turrets, which correspond to the tool Nos. 1 to 32, as facing turrets for T code mirror image.

---Setting range

0 to FFFFFFF

[#1204] TmirS2 Select turrets as facing turrets with T command (for L system only)

Select the turrets, which correspond to the tool Nos, 33 to 64, as facing turrets for T code mirror image.

-Setting range

0 to FFFFFFF

[#1205] G0bdcc Acceleration and deceleration before G0 interpolation

0: Post-interpolation acceleration/deceleration is applied to G00.

1: Pre-interpolation acceleration/deceleration is applied to G00 even in the high accuracy control mode.

2: Rapid traverse constant inclination multi-step acceleration/deceleration is enabled.

(Note) "1" cannot be set for the 2nd part system and the following.

Base Specifications Parameters

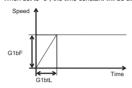

[#1206] G1bF Maximum speed

Set a cutting feedrate when applying pre-interpolation acceleration/deceleration. When high-accuracy control time constant expansion is valid, set the maximum of cutting feed clamp speed of each axis.

---Setting range

1 to 999999 (mm/min)

[#1207] G1btL Time constant Set a cutting feed time constant when applying pre-interpolation acceleration/deceleration. When set to "0", the time constant will be clamped at 1ms.

---Setting range

Without high-accuracy control time constant expansion: 0 to 5000 (ms)
With high-accuracy control time constant expansion: 0 to 30000 (ms)

Cutting feed Acc Cutting feed acceleration

Displays cutting feed acceleration.

[#1208] RCK Arc radius error compensation factor

Set a coefficient for arc radius error compensation.

An arc radius error compensation amount can be increased or decreased between -60.0 and +20.0%.

---Setting range -60.0 to +20.0 (%)

[#1209] cirdcc Arc deceleration speed

Set the deceleration speed at the arc entrance or exit.

---Setting range

1 to 999999 (mm/min)

Base Specifications Parameters

[#1210] RstGmd Modal G code reset

Select whether to initialize G code group modals and H and D codes, which corresponds to bits as follows, when the system is reset

0: Initialize. 1: Not initialize.

<Description of bits for M system>

1F 1E 1D 1C 1B 1A 19 18 17 16 15 14 13 12 11 10 000000...0000....

FFDC R 4 9 8 7 6 5 4 3 2 1 0 * 0 * * 0 * 0 * * * * 0 * * *

bit 1F: (Not used)

bit 1E: (Not used)

[#1213(PR)] proaxy Side 1 of inclination angle (for L system only)

Set the length within the orthogonal coordinate of the inclined axis, a side of the triangle formed with the inclination angle.

⁻⁻⁻Setting range

Base Specifications Parameters

[#1214(PR)] macaxy Side 2 of inclination angle (for L system only)

Set the actual length of the base axis corresponding to the inclined axis, a side of the triangle formed with the inclination angle.

---Setting range -9999.999 to 9999.999

[#1215(PR)] macaxx Side 3 of inclination angle (for L system only)

Set the actual length of the inclined axis, a side of the triangle formed with the inclination angle.

---Setting range -9999.999 to 9999.999

[#1216] extdcc External deceleration level

Set the upper limit value of the feedrate when the external deceleration signals are enabled.

-Setting range

1 to 999999 (mm/min)

[#1217] aux01

Not used. Set to "0"

【#1218】 aux02

bit3: Parameter input/output format

Select the parameter input/output format.

0: Type I 1: Type II (related to "#1218 aux02/bit5")

bit4: External workpiece coordinate offset tool number selection

Select the R register that contains the tool number used for automatic calculation when

measuring the coordinate offset of an external workpiece.

0: Follow the setting of "#1130 set_t".

1: Use the tool number indicated by user PLC

bit5: Parameter I/O II spindle specification address

Select the spindle specification address of parameter I/O type II.

0: C 1: T

This parameter is also applied to the spindle specification address for input and verification. (Note) This parameter is valid only for parameter I/O type II (when "#1218 aux02/bit3" is set

bit6: Set No. valid when program input

Select which program No. is applied when inputting programs in "#1 MAIN PROGRAM" on

Data I/O screen.
0: The No. in the input data
1: The No. set in the data setting area

bit7: Input by program overwrite

(1) Select the operation when the program to be input in "#1 MAIN PROGRAM" on Data I/O screen, has already been registered.

0: An operation error (E65) occurs.

1: Input by overwrite

(2) Select the operation in the high-speed program server mode, when the name of the file to be transmitted with (IC -> host) transmission already exists in the host. 0: Prohibit overwrite

1: Enable overwrite

[#1219] aux03

bit1: Stop high-speed PC monitoring function

Set "1" to disable the function that triggers the emergency stop when the PC high-speed processing time is extended.

Disable the monitoring function only as a temporary measure.

bit5: Dog-type intermediate point

Select whether to move to the intermediate point during automatic dog-type reference position return

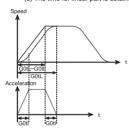

- 0: Not move.
- 1: Move.

bit7: Time constant setting changeover for soft acceleration/deceleration

Accelerating time is G0tL(G1tL).
 When the G00 pre-interpolation acceleration/deceleration and the soft acceleration/ deceleration are used together, the inclination of soft acceleration/deceleration will be steeper by setting a time to the soft acceleration/deceleration 2nd step time constant (#2005 G0t1).

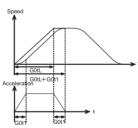

- Consequently, the acceleration for G28/G30 will be larger than that for G00.

 (1) Total accelerating time is "G0tL".
- The time for curve part is "G0t1" (3) The time for linear part is obtained by "G0tL-(2 x G0t1)".

 Accelerating time is obtained by G0tL+G0t1 (G1tL+G1t1).
 When the G00 pre-interpolation acceleration/deceleration and the soft acceleration/deceleration are used together, you can attain the G28/G30 acceleration that is equal to G00, by setting the same value to G00 soft acceleration/deceleration filter (#1569 SfiltG0) as well as to the soft acceleration/deceleration 2nd step time constant (#2005 G0t1).

- (1) Total accelerating time is obtained by "G0tL+G0t1".
 (2) The time for curve part is "G0t1".
 (3) The time for linear part is obtained by "G0tL-G0t1".

[#1220] aux04 (for L system only)

bit 0: Tool life check timing selection

Select the criterion to judge the tool life end when the use count is incremented in tool life management II

- 0: Determine the tool life end when the incremented use count has exceeded the life count. (Default)
 (Use count > life count)
- Determine the tool life end when the incremented use count has reached the life count

(Use count ≥ life count)

[#1221] aux05

bit0: Workpiece coordinate/ Absolute coordinate display switching

Select the coordinate to display when workpiece coordinate position counter is selected for the Monitor screen counter display.

- 0: Workpiece coordinate
- 1: Absolute coordinate

[#1222] aux06

bit4: Minimum cut-in amount selection

Select the minimum cut-in amount command value for the compound thread cutting cycle (G76 command).

- 0: The minimum cut-in amount (Q) will be "0".

 1: The minimum cut-in amount (Q) will be set in the CNC internal data.

bit5: Fixed cycle for compound lathe command format check selection

Select the operation when the 1st block of the fixed cycle for compound lathe is omitted while the conventional format is selected ("#1265 ext01/bit0" is set to "0").

- 0: Program error (P33) will occur
- 1: Parameter setting value will be used.

bit7: Reference position return deceleration check method

Select the deceleration check method to be used during automatic reference position

- 0: In-position check
- 1: Commanded deceleration check

【#1223】 aux07

bit1: Deceleration check method 2

Select the deceleration check method in G1+G9.

- Command deceleration check in G1+G9
 In-position check in G1+G9

The deceleration check is not performed for the commands except G1+G9. When '#1306 InpsTyp deceleration check specification type 'is set to "1" (Deceleration check specification type 2'), this parameter will be invalid.

bit2: Synchronous tap R-point in-position check

Select whether to enable the synchronous tap I-point -> R-point in-position check.

- 0: Disable
- 1: Enable

(Note) This parameter is valid only when "1" (Enable in-position check) is set for "#1223 aux07/bit3 Synchronous tap in-position check improvement".

bit3: Synchronous tap in-position check improvement

Select whether to enable the synchronous tap in-position check improvement.

- 0: Disable 1: Enable

- Related parameters: #1223/bit2 Synchronous tap R-point in-position check #1223/bit4 Synchronous tap hole bottom in-position check #1223/bit5 Synchronous tap R-point in-position check 2

bit4: Synchronous tap hole bottom in-position check

Select whether to enable the synchronous tap hole bottom in-position check.

- 0: Disable 1: Enable

(Note) This parameter is valid only when "1" (Enable in-position check) is set for "#1223 aux07/bit3 Synchronous tap in-position check improvement".

bit5: Synchronous tap R-point in-position check 2

Select whether to enable the synchronous tap R-point in-position check.

- 0: Disable 1: Enable

(Note) This parameter is valid only when "1" (Enable in-position check) is set for "#1223 aux07/bit3 Synchronous tap in-position check improvement".

bit6: Cancel synchronous tap (, S) return

- 0: Retain the spindle speed (, S) in synchronous tap return 1: Cancel the spindle speed (, S) in synchronous tap return with G80

bit7: Synchronous tap method

- Select the synchronous tapping method.

 0: Synchronous tapping with multi-step acceleration and rapid return
 - 1: Conventional type synchronous tapping

[#1224] aux08

bit0: Sampling data output

Select whether to enable the sampling data output.

- 0: Disable 1: Enable

【#1225】 aux09

bit7: Enable/disable spindle rotation speed clamp

Select whether to enable the spindle rotation speed clamp by the G92 S or Q command for the spindle command rotation speed (R7000) set with the user ladder.

- 0: Enable
- Disable

Base Specifications Parameters

[#1226] aux10

bit0: Tool compensation data for external workpiece coordinate offset measurement

Select the tool compensation data to be used for external workpiece coordinate offset measurement.

- 0: Tool length data and tool nose wear data 1: Tool length data

bit1: Optional block skip type

Select whether to enable the optional block skip in the middle of a block

- 0: Enable only at the beginning of a block
- 1: Enable in the middle of a block, as well as at the beginning of the block.

bit2: Single block stop timing

- Select the timing at which the single block signal is activated.

 0: When the signal goes ON while automatic operation is starting, the block will stop after finished
 - When the signal is ON at the end of the block, the block will stop.

bit3: C-axis reference position return type

- Select the C-axis reference position return type.

 0: Basic position return is performed by the G28 reference position return command or
 - by activating the manual reference position return. The basic point dog is used.

 1: When the first C-axis command is issued after the C-axis mode is entered in automatic mode, reference position return is performed before the execution of the block. The reference position return is also performed by the G28 reference position return command or by activating the manual reference position return. The Z phase of the encoder is used

bit4: S command during constant surface speed

Select whether to output a strobe signal when the S command is issued in constant surface speed mode

- Not output any strobe signal in constant surface speed mode.
- Output strobe signals in constant surface speed mode.

bit5: Arbitrary allocation of dog signal

Select whether to enable the arbitrary allocation parameter for the origin dog and H/W OT. 0: Disable (Fixed device is used.)

- 1: Enable (Device is specified by the parameter.)

bit7: Shorten JOG stop time

Select whether to shorten the JOG stop time

- 0: Not shorten (Conventional specification) 1: Shorten

[#1227] aux11

bit0: Select PLC signal or spindle feedrate attained

- Set up this option when disabling the cutting start interlock by spindle feedrate attained. 0: Cutting start interlock by PLC signal

 - Cutting start interlock by spindle feedrate attained

bit1: Select H or D code

Set up this option to validate the data that is set up on the tool life management screen when issuing the H99 or D99 command.

0: The H and D codes validate the data that is set up on the management setup screen. 1: Validates the data that is set up on the management setup screen when issuing the H99 or D99 command.

bit2: Measures against tool setter chattering

Select a condition where a relieving operation completes after measurement with tools. 0: Sensor signals have stopped for 500 ms or longer.

- 1: 100 μ m or longer has passed after sensor signals stopped.

bit3: Absolute coordinate switching (nose R)

Select whether to display a nose position or coordinate value with the absolute coordinate counter.

- 0: Displays the nose position
- Displays the position specified by program command. Select a condition where a relieving operation completes after measurement with tools.

bit5: Spindle rotation speed clamp

Specify whether to clamp the rotation speed in constant surface speed mode when the spindle rotation clamp command is issued.

0: Clamps the rotation regardless of the constant surface speed mode.

- 1: Clamps the rotation only in constant surface speed mod

bit7: Switch the range of tool life data to be input

Set up the range of tool life data to be input or compared.

- Inputs or compares all of the data output. 1: Inputs or compares part of the data output
- 1) Tool life management I data to be input or compared tool number (D), lifetime (E), life
- count (F), and auxiliary data (B).

 2) Tool life management II data to be input or compared Group number (G), method (M), life (E/F), tool number (D), and compensation number (H)

[#1228] aux12

bit1: Switch "offset and parameter" screen

Select to switch the "offset and parameter" screen to the parameter screen.

0: Display the "offset and parameter" screen.

1: Display the "parameter" screen.

bit2: Switch data protection in data transmission mode

Select the range of data protection in data transmission mode.

- 0: Enable the protection for both send and receive data
- Enable the protection for receive data only.

bit3: Nose R specification

Select the method to specify the nose R compensation.

0: Specify the nose R compensation by shape number.

- Specify the nose R compensation by wear number

bit4: Select operation error or stop code

Select operation error or stop code to provide for both block start and cutting start interlocks.

- 0: Operation error
- 1: Stop code

bit5: Select constant surface speed coordinates

Select the constant surface speed coordinate

- 0: Workpiece coordinate
- 1. Absolute value coordinate

bit6: Switch relative values displayed

Select whether to preset the relative coordinates with workpiece coordinate preset (G92.1) or counter preset (G92).

0. Preset the relative coordinates.

- 1: Not preset the relative coordinates.

bit7: Protection with manual value command

- Select whether to protect a manual value command. 0: Not protect. (Conventional specification)
 - 1: Protect.

【#1229】 set01

bit0: Subprogram interrupt

Select the type of the user macro interrupt.

- Macro type user macro interrupt
 Sub-program type user macro interrupt

bit1: Accurate thread cutting E

Select what the address E specifies in inch screw cutting.

- 0: Number of threads per inch
- 1: Precision lead

bit2: Radius compensation type B (for M system only)

Select the method of the arithmetic processing for the intersection point when the start-up or cancel command is operated during radius compensation.

- 0: The processing does not handle the start-up or cancel command block: handle the offset vector in the direction vertical to that of the command instead
- 1: The processing is executed for the intersection point between the command block and the next block.

bit2: Nose R compensation type B (for L system only)

Select the method of the arithmetic processing for the intersection point when the start-up or cancel commands are operated during nose R or radius compensation

- The processing does not handle the start-up or cancel command block: handle the offset vector in the direction vertical to that of the command instead.
- The processing is executed for the intersection point between the command block and the next block

bit3: Initial constant surface speed

- Select the initial state after the power-ON.
 - 0: Constant surface speed control cancel mode
 - 1: Constant surface speed control mode

bit4: Synchronous tap

Select the operation when ",R" is omitted in G74/G84 tapping cycle.

- 0: Asynchronous tap 1: Synchronous tap

bit5: Start point alarm

Select the operation when the operation start point cannot be found while executing the next block of G117

- 0: Enables the auxiliary function after the block has been executed.
- Outputs the program error (P33).

bit6: Grid display selection

Select the grid display type on the servo monitor screen during the dog type reference

- Distance between dog OFF and basic point (including a grid mask amount)
 1: A value given by reducing a grid mask amount from the distance between dog OFF and basic point

Base Specifications Parameters

[#1230] set02

bit7: Macro interface input/output for each part system

Select the specification of the macro interface input/output.

- Shared by all part systems.
 Used independently by the part systems.

[#1231] set03

bit0: Graphic check compatibility parameter

Select whether to return the data to the pre-starting data after having checked a machining program that rewrites the common variables, workpiece offsets and tool offsets.

- 0: Return the data
 - 1: Not return the data

bit1: Switch graphic trace coordinates

Select whether to use machine coordinate value or tool position coordinate value (position being machined, obtained by subtracting the tool compensation amount from machine coordinate values) for drawing with trace display.

0: Machine coordinate value (conventional method)

- 1: Tool position coordinate value

bit2: Switch graphic check trace

Select the coordinates to draw at program check: both machine coordinate value (tool center path) and tool position coordinate value (program path) simultaneously, or only the coordinates selected with "#1231 set03/bit1 (Switch graphic trace coordinates)"

- Both machine coordinates and tool position coordinates (conventional method)
- 1: Only coordinates designated with switch graphic coordinates

bit4: Switch zero point mark display position

Select the position for displaying the basic point mark in the graphic trace and 2D check.

0: Machine coordinate basic point (same as conventional method) 1: Workpiece coordinate basic point

bit5: Switch graphic check counter display

Select the type of counter displayed on the Graphic Check screen with the combination of "#1231 set03/bit1".

If the drawing coordinate system is other than "all workpiece coordinates", the counter displayed is workpiece coordinate position counter or tool position (workpiece coordinate)

- regardless of this setting.

 0: (When "#1231 set03/bit1" is set to "0") Machine position counter
 (When "#1231 set03/bit1" is set to "1") Tool position (workpiece coordinate)
 - tounter
 1: (When "#1231 set03/bit1" is set to "0") Workpiece coordinate counter
 (When "#1231 set03/bit1" is set to "1") Tool position (workpiece coordinate) counter

[#1232] set04

Not used. Set to "0".

【#1233】 set05

bit1 : Spindle clamp selection

Select whether to enable/disable the spindle override for the spindle speed clamp command (G92 S?).

- 0 : Disable
- 1 : Enable

【#1234】 set06

bit3: Interlock when tap retract enabled

Select whether to enable automatic/manual interlock for the part system with "Tap retract enable" signal ON.
0: Interlock all the axes

- Disable the interlock

[#1235] set07

bit0: Helical interpolation speed 2

- 0: Select normal speed designation also for 3rd axis 1: Select arc plane element speed designation

bit2: Fixed type chopping compensation valid only at start

When the fixed type compensation value is selected, the method can be changed to the compensation value sequential update type after the first four cycles.

- 0: Disable the method changeover 1: Enable the method changeover

bit4: Selection condition of synchronous tapping gear step

Select the parameters that determine the gear step for synchronous tapping. 0: #3005 through #3008 (smax1 to 4) when "#1223 aux07/bit7" is "0".

- Or #3013 through #3016 (stap1 to 4) when "#1223 aux07/bit7" is "1".
- 1: Always #3013 through #3016 (stap1 to 4)

Base Specifications Parameters

[#1236] set08

bit0: Manual rotary axis feedrate unit

Select the unit of manual rotary axis feedrate.

- Fixed to [°/min]
 Same speed as before (When inch command, the speed is the command speed) divided by 25.4.)

bit1: Spindle speed detection

Select the pulse input source of actual spindle rotation speed (R6506/R6507) when the spindle encoder serial connection is selected ("#3025 enc-on" is set to "2").

- 0: Serial input
- 1. Encoder input connector

bit2: Current limit droop cancel invalid

Select whether to cancel the position droop when the current limit changeover signal is canceled

- 0: Cancel the droop
- 1: Not cancel the droop.

bit3: Rotary axis command speed scale

Select to multiply the rotary axis command speed by 10 times

- - 1: During initial inching, the rotary axis command speed is multiplied by 10. In other words, if "F100" is commanded, the speed will be the same as when 1000°/min is commanded

The rotary axis speed display unit will be 10°/min.

[#1237(PR)] set09

Not used. Set to "0".

【#1238(PR)】 set10

bit0: Switch G36 function

Select the function, the automatic tool length measurement or arc thread cutting (CCW), to

- be applied to G36 when the G code system 6 or 7 is selected.
 - 0: Automatic tool length measurement 1: Arc thread cutting (CCW)

bit6: Switch absolute position detection alarm

Select the output destination of the absolute position detection alarm

- 0: NC alarm 4 (AL4) 1: NC alarm 5 (AL5)

(Note) The absolute position detection alarm is listed in the alarm history regardless of this parameter setting.

bit7: Switch operation alarm

Select whether to enable the NC alarm 5 (AL5) signal output.

0: Disable NC alarm 5 (AL5) (default)

All operation alarms will be output to NC alarm 4 (AL4).

- - All operation alarms will be recorded in the alarm history.
- 1: Enable NC alarm 5 (AL5)
 - The following operation alarms will be output to NC alarm 5 (AL5), not to NC alarm 4 (AL4).

The operation alarms output to NC alarm 5 (AL5) will not be recorded in the alarm history.

- External interlock axis found (M01 0004)
- Cutting override zero (M01 0102)
 External feedrate zero (M01 0103)

- External reductive Zero (MOT 0103)
 Block start interlock (M01 0109)
 Cutting block start interlock (M01 0100)
 Cutting interlock for spindle-spindle polygon (G51.2) (M01 1033)

Base Specifications Parameters

【#1239(PR)】 set11

bit0: Coil switching method

Select the coil switching method. 0: Via PLC (Y189F).

1: NC internal processing. (Y189F is invalid.)

bit1: Handle I/F selection

Select the handle connection destination.

0: Use the handle connected to the encoder communication connector.

1: Use the remote I/O unit as a priority.

When HN341/HN342/HN351/HN391/HN392 is mounted, the handle connected to the operation panel I/O unit will be used regardless of this parameter setting.

bit3: Polygon machining mode at reset

Select whether to cancel the polygon machining mode when reset is applied.

- 0: Not cancel.
- 1: Cancel

bit4: Invalidate G51.1 phase command

Select whether to enable the phase control with the spindle-spindle polygon function. 0: Always enable. (When R is not commanded, it will be handled as R0.)

- 1: Enable only at the R command.

bit5: Door interlock spindle speed clamp valid

Select whether to enable the spindle clamp speed changeover by the PLC signal.

- 0: Disable
- 1: Enable

【#1240(PR)】 set12

bit0: Handle input pulse

- Select the handle input pulse.
 0: MITSUBISHI CNC standard handle pulse (25 pulse/rev)
 - 1: Handle 400 pulse (100 pulse/rev)

bit2: Zero point shift amount magnification

When "1" is set, the following magnification will be applied on the "#2027 G28sft Reference position shift distance", "#2057 Near zero point +" and "#2058 Near zero point -" settings.

For 0.1 μ m: 10-fold

For 0.01 μ m: 100-fold

bit4: Optical communication automatic channel detection invalid

Select whether to enable the optical communication automatic channel detection

- 0: Enable
- 1. Disable

[#1241(PR)] set13

bit0: No G-CODE COMB. Error

Select the operation for when an illegal combination of modal and unmodal G codes are commanded in a same block

- 0 : The program error (P45) will occur.
- 1 : A program error can be avoided but the modal G code will be ignored.

[#1242] set14

bit7: Synchronous tap spindle rotation direction type

Select whether the spindle's rotation direction is determined by the synchronous tapping axis' travel direction

0: The spindle's rotation direction is determined by the synchronous tapping axis' travel direction.

When the travel direction is negative, the spindle rotates forward.

When the travel direction is positive, the spindle rotates in reverse

1: The spindle always rotates forward regardless of the synchronous tapping axis' travel direction

(Note)When a reverse tap is commanded, the spindle rotates in an opposite direction to that mentioned above.

【#1246(PR)】 set18

bit2: Switch coordinate systems for radius compensation

Select the coordinate system for radius compensation.

 Type 1 (Conventional specification)
 Perform radius compensation with reference to a position on the workpiece coordinate system.

 Type 2
 Perform radius compensation with reference to a position on the program coordinate. system.

bit3: Change repetition final return position at M2L

Select the final return position after repetition, when in G99 modal and in M2 format with the label L.

0: Initial point 1: R point

bit4: T-lifeover signal output

Select the timing at which tool life over signal is output when using the M system tool life management I/III.

0: Turn the signal ON when a selected tool has reached the lifetime.

1: Turn the signal ON when any of tools in a selected group has reached the lifetime.

bit5: Tool status update type

Select whether to update tool status automatically when lifetime/usage data is changed on the screen in the M system tool life management I/II/III.

0: Not update.

(Note) When "1" is selected, tool status will be updated as follows.
- When usage data is "0", tool status will be "0".

When usage data is smaller than lifetime data, tool status will be "1".

- When usage data is the same as or larger than lifetime data, tool status will be "2".

bit6 : Switch F 1-digit feedrate change method

Set whether to enable feedrate change with handle until power OFF, or change the parameters #1185 to #1189 with change of speed.

0: Enabled until power OFF

1: Change #1185 spd_F1 to #1189 spd_F5

bit7: PLC axis random device assignment

Select whether to enable the origin dog and H/W OT random assignment for a PLC axis.

0: Disable (assigned to a fixed device)

1: Enable (assigned to the parameter set device)

[#1247] set19

bit0: Movement by tool length compensation command (for M system only)

Select whether or not to move the axis by the compensation amount when tool length

compensation/cancel is independently commanded.
(Note) This parameter is available for only M700V Series.

M700/M70V/M70 Series will perform the same operation as when this parameter is set to

0: Move

1. Not move

bit1: Thread cutting operation when manual speed command enabled

Select the thread cutting operation in manual speed command.

The axis travels at the handle feed rate, jog feed rate, or manual rapid traverse rate
 The axis travels following the program command

Select the high-speed high-accuracy G code type

- 0: Conventional format (G61.1)
- 1: MITSUBISHI special format (G08P1)

【#1268(PR)】 ext04

bit2: Enable synchronous tapping per minute

Select whether to enable feed per minute with the F command of synchronous tapping

0: Disable (Command in pitch regardless of "G group 5" modal) 1: Enable (Follow "G group 5" modal)

【#1269(PR)】 ext05

Not used. Set to "0".

Base Specifications Parameters

[#1270(PR)] ext06

bit3: Finished shape judgement disable

Select to enable/disable the judgement of shape when the finished shape's Z axis (or X axis at G7Z command) does not move monotonously. Program error (a shape change at pocket machining) can be avoided when selected to disable.

- 0 : Enable
- 1 : Disable

bit5: Coordinate rotation angle without command (for L system only)

Select the operation when there is no rotation angle command R for the coordinate rotation.

- 0: Use the previously commanded value (modal value). If the command is the first issued command, the rotation angle will be 0°.
 - 1: Use the set value in "#8081 Gcode Rotat"

bit6: Switch continuous thread cutting Z phase wait operation

Select when to start the 2nd block thread cutting when there is a command with no movement (MST command, etc.) between the thread cutting blocks

- 0: Wait for the spindle's single rotation synchronization signal before starting the movement.
- 1: Start movement without waiting for the spindle's single rotation synchronization signal.

bit7: Handle C axis coordinate during cylindrical interpolation

Specify whether to keep the rotary axis coordinate as before the cylindrical interpolation start command is issued during the cylindrical interpolation.

0: Not keep

- 1: Keep

Base Specifications Parameters

【#1271(PR)】 ext07

bit0: Mirror image operation

Select the type of mirror image operation.

- 0: Type
- Type 1
 The program mirror image, external mirror image, and parameter mirror image are exclusive to each other
 - An increment command moves the image to the position indicated by the travel amount with the sign inverted
 - 1: Type 2
 - Mirror image operation is enabled when the program mirror image (G51.1) command
 - is issued or when the external signal or parameter is ON.

 An increment command moves the image to the position determined by applying the mirror image to the absolute program coordinates.

bit1: Address specifying fixed cycle repetition count (for M system only)

Select the address that specifies the fixed cycle repetition count.

- 0: Address L only (Default)
- 1: Addresses K and L

If addresses K and L are specified simultaneously, the data at address K will be used for operation.

bit2: F-command unit

Select the unit to be used when a thread cutting lead command does not contain decimal

- 0: Type 1 (conventional specifications) F1 -> 1 mm/rev, 1 inch/rev
 - Type 2
- F1 -> 0.01 mm/rev, 0.0001 inch/rev

bit3: G-code group for unidirectional positioning (for M system only)

Select the G-code group for unidirectional positioning.

- 0: Unmodal G code (group 00)

 Modal G code (group 01)
 Related parameter: "#8209 G60 Shift" (Set the last positioning direction and distance for each axis applicable when the unidirectional positioning command is issued.)

bit4: Operation by independent G40 command

Select whether the radius compensation vector is canceled by the independent G40

- O: Type 1 (conventional specification) (Default)
 The radius compensation vector will be canceled by the independent G40 command. 1: Type 2
 - The radius compensation vector won't be canceled by the independent G40 command: it will be canceled by the next travel command for the radius

compensation plane.

bit5: Cut start position (for L system only)

Select the position from where cutting begins in a fixed cycle for compound lathe.

0: Conventional specification (Default)

- The cut start position will be determined by the final shaping program. Extended specification

The cut start position will be determined from the cycle start point.

bit6: Nose R compensation (for L system only)

Select whether to apply nose R compensation for shapes in a rough cutting cycle.

0: Conventional specification (Default)

- The shape after nose R compensation in the final shaping program will be used as rough cutting shape (when the nose R compensation for the final shaping program). 1: Extended specifications
- The shape without nose R compensation in the final shaping program will be used as rough cutting shape

bit7: Cut amount (for L system only)

Select the operation to be performed when the program-specified cut amount exceeds the cut amount of the final shaping program

- 0: Conventional specification (Default)
- A program error will occur when the program-specified cut amount exceeds the cut amount of the final shaping program
- 1: Extended specification
 - Rough cutting will be performed by one cut when the program-specified cut amount exceeds the cut amount of the final shaping program

【#1272(PR)】 ext08

bit0: Switch pocket machining operation

Select the pocket machining specification.

0: Conventional specification

Pocket machining will be selected with the H designation

The pull direction when pocket machining is ON will be the Z direction.

1: Extended specification

Pocket machining will start only when both X and Z axes are specified in the first travel block after the finished shape start block.

The pull direction when pocket machining is ON will be the X direction

bit1: M function synchronous tap cycle

Specify whether to enable the M function synchronous tapping cycle.
0: Disable

1. Enable

bit2: Spiral/conical interpolation command format 2

Select the command format for spiral and conical interpolation.

0: Type 1 (conventional specification)
1: Type 2 (with the number of spiral rotation L designation and the increment designation)

bit3: Switch macro call function

Select whether to shift the argument to the subprogram if nests are overlapped when per block call (G66.1) is commanded.

0: Shift

Not shift (Conventional specification)

bit4: Tap cycle selection

Select the tapping cycle

Pecking tapping cycle
 Deep hole tapping cycle

bit5: Deep hole tap cycle override selection

Select whether to enable override on the pulling operation during synchronized tapping with the deep hole tapping cycle.

0: Disable

1: Enable

bit6: Switch corner chamfering/ corner R command format

Select the command format of the corner chamfering/corner R.

0: Command format I (conventional format)

Issue a command with comma (,C and ,R). 1: Command format II

In addition to command format I, addresses without comma can be used to command. I/K or C can be used for corner chamfering, while R can be used for corner R.

bit7: Return position after macro interrupt in fixed cycle selection

Select the destination to return to after a macro interrupt in the fixed cycle.

0: Return to the block in the fixed cycle

Return to the block next to the fixed cycle.

【#1273(PR)】 ext09

bit0: Switch ASIN calculation results range

Select the notation system for operation result of ASIN.

0: Do not switch minus figures to positive figures. (-90° to 90°)

1: Switch minus figures to positive figures. (270° to 90°)

bit1: Switch system variable unit

Select the unit for the system variable #3002 (time during automatic start).

0: 1 ms unit 1: 1 hour unit

bit2: Switch G71, G72, G73 cutting direction judgment

Select the cutting direction when the longitudinal rough cutting cycle (G71), face rough cutting cycle (G72) or closed loop cutting cycle (G73) is commanded.

0: Conventional specification

Determined according to the finished shape program.

1: Extended specification

Determined according to the finishing allowance and cutting allowance commanded in the program.

bit3: Facing turret mirror image coordinate value type

Select how to show the workpiece coordinate values of the axis for which the facing turret mirror image is valid.

 Movements in the workpiece coordinate system are in the same direction as those in the workpiece machine coordinate system.

1: Movements in the workpiece coordinate system are in the opposite direction to those in the workpiece machine coordinate system.

bit4: Facing turret mirror image valid axis selection

Select the axis for which the facing turret mirror image is valid

0: Fixed to 1st axis

1: Determined according to the plane selected when the facing turret mirror image is commanded

【#1274(PR)】 ext10

bit7: Word range check

Select whether to check that the operation expression of the word data in the program is

enclosed in brackets ([]) when the machine program is executed.

This check is also applied to the 08000 to 09999 and the machine tool builder macro program.

- 0: Not check
- 1: Check

bit0: Tool life management II count type 2

Select how and when the mount or use count will be incremented in tool life management II. The condition to output "tool group life over (TGLO)" signal will be changed accordingly.

0: Type 1 (Default)
Counts up when

pe 1 (Default)
ounts up when the spindle tool is used for cutting.
ounts up when the spindle tool is used for cutting. TGLO signal will be output when the last tool in se

1: Type 2 Counts up by one for a tool used or mounted in a program at the time of resetting. TGLO signal will be output when any of tool groups has reached its lifetime limit.

bit1: Tool life management II life prediction

Select whether to enable tool life prediction function in tool life management II.

- 0: Disable
- 1: Enable

bit2: Tool life management II life end signal timing

Select the timing at which tool life prediction signal is output in tool life management II.

0: Output only when the ["life value" - "used value"] matches the remaining life.

("life value" - "used value" = "remaining life")

1: Output when the ["life value" - "used value"] is less than the remaining life.

("life value" - "used value" ≦ "remaining life")

bit3: Tool life management II life end signal tool

Select the tool for which the tool life prediction signal is output in tool life management II.

0: Output the signal tool by tool

Output the signal at the last tool in the group.

bit4: Tool life management II count changeover (For M system only)

Select the tool life count method and its timing

0: Conforms to "ext13/bit0" setting.
1: When "ext13/bit0" is set to "0":

when extraction is set to 0...

Counts up by one for a tool used or mounted in a program at the time of resetting.
When "ext13/bit0" is set to "1":
Follow the setting of "Method (Mthd)" on Tool life screen.
tput condition of "tool group life over" signal conforms to "ext13/bit0".

The output condition of

【#1278(PR)】 ext14

bit0: Program restart method selection

Select the program restart type

- 0: Restart type A
- 1: Restart type B

[#1279(PR)] ext15

bit0: Part system synchronization method

Select the part system synchronization method.

- 0: If one part system is not in the automatic operation, the synchronization command will be ignored and the next block will be executed.
- De ignored and the next block will be executed.

 1: Operate according to the "waiting ignore" signal.

 If the "waiting ignore" signal is set to "1", the synchronization command will be ignored. When set to "0", synchronization will be applied.

bit1: Interrupt amount during machine lock

Select when to cancel the interruption amount during machine lock.

- When resetting
 During manual reference position return (not when resetting)

bit2: Selection of cutting start interlock target block

Select whether to enable the cutting start interlock for successive cutting blocks.

0: Enable

1: Disable

bit5: Cancel G92 shift distance

Select whether to clear the G92 (coordinate system setting) shift distance when the manual reference position is reached.

- 0: Not clear
- 1: Clear

Base Specifications Parameters

【#1280(PR)】 ext16

bit0: I/F per axis during mixed control (cross axis control)

Select how to handle the following PLC interface for axes interchanged with the mixed control (cross axis control)

- Mirror image
- Manual/automatic interlock - Manual/automatic machine lock
- Follows axis configuration before the mixed control (cross axis control).
 - 1: Follows axis configuration after the mixed control (cross axis control).

(Example)

The device No. of automatic interlock (+) for X1 will be as follows when the mixed control (cross axis control) is executed with the 1st axis (X1) in the 1st part system and 1st axis (X2) in the 2nd part system.

When "0" is set: Y820 (interface for 1st axis in 1st part system)
When "1" is set: Y828 (interface for 1st axis in 2nd part system)

(Note) If the number of axes in the part system changes with the mixed control (cross axis control), the interface of the target axis may change when this parameter is set to "1".

(Example) When 1st part system's C axis is moved to 2nd part system with a 1st part system (X, Z, C,

When I st part system (X, Z), configuration:

When "1" is set: Y82A, Y7CA, Y8AA and later will be the interface for the C axis moved to
the 2nd part system, Y7C2, Y82A, Y8CA and later will be the interface of the Y axis in the 1st part system, because the axes following the removed C axis (third place) are shifted up.

bit1: Mixed control (cross axis control) cancel with reset

Select whether to cancel the mixed control (cross axis control) when reset is applied.

- 0: Cancel
- 1: Not cancel.

bit2: Interchange coordinate position display

Select whether to display interchanged (or moved) coordinate positions in the mixed control (cross axis control).

This setting will be applied when the axes are moved, as well as when the axes are interchanged.

- Display interchanged (or moved) coordinate positions
- 1: Display coordinate positions without being interchanged (nor moved).

When 1st part system's C axis is moved to 2nd part system with a 1st part system (X, Z, C, When 1st part system C axis is moved to 2nd part system with Y) and 2nd part system (X, Z) configuration:

1st part system: X, Z and Y coordinate positions are displayed.

2nd part system: X, Z and C coordinate positions are displayed.

bit3: Reset operation for synchronization/super-imposition control

Select whether to cancel synchronization/superimposition control when reset is applied

- 0: Cancel
- 1: Not cancel.

bit4: Mixed control (cross axis control) command method

Select how to command mixed control (cross axis control).

- 0: Use PLC interface signal for mixed control
- 1: Use G command for mixed control

bit5: Command method of control axis synchronization across part systems

Select how to command the control axis synchronization across part systems. 0: Use PLC I/F.

- 1: Use G command

【#1281(PR)】 ext17

bit0: Switch manual high-speed reference position return in synchronous control

Select the movement of synchronized axes in manual high-speed reference position return

- 0: Primary and secondary axes start the return synchronizing. Even when one axis stops at its reference position, the other axis continues moving until it reaches its reference position.
- 1: Primary and secondary axes start the return synchronizing, and when the primary axis stops at the reference position, the secondary also stops. Thus, the relative position of the primary and secondary is kept.

bit3: Synchronous control operation setting

Select whether or not the positioning of secondary axis automatically aligns with that of primary axis when the axis subject to synchronous control is changed from servo OFF to servo ON.

- The positioning automatically aligns.
 The positioning does not align.

bit5: High-speed synchronous tapping valid

Select whether to enable the high-speed synchronous tapping.

- n. Disable
- 1: Enable

bit6: Compensation method for external machine coordinate system/ball screw thermal expansion during synchronization

Select the method of how to compensate the secondary axis when compensating external machine coordinate system or ball screw thermal expansion during synchronization control. The setting of this parameter will be validated when you select synchronous operation method by the synchronization control operation method signal.

- 0: Primary axis and secondary axis are independently compensated.
 1: Primary axis' compensation amount is applied to secondary axis.

bit7: Switch automatic high-speed reference position return in synchronous control

Select the movement of synchronized axes in automatic high-speed reference position

- 0: Primary and secondary axes start the return synchronizing, and when the primary axis stops at the reference position, the secondary also stops. Thus, the relative position of the primary and secondary is kept.
- 1: Primary and secondary axes start the return synchronizing. Even when one axis stops at its reference position, the other axis continues moving until it reaches its reference position.

[#1282(PR)] ext18

bit1: Condition of the reference position reached signal in synchronous control

This parameter switches only conditions of a master axis's reference position return reached signal in synchronous operation. A slave axis's signal is output when the slave axis reaches the reference position coordinate.

- 0: A master axis's reference position reached signal is output only when both of the master and slave axes reach the reference position coordinate by a reference position return.
- A master axis's reference position reached signal is output when the master axis reaches the reference position coordinate.

bit2: Measurement basic point for tool length measurement I (for L system only)

Select how to specify the measurement base point coordinate for manual tool length measurement I.

- Specify the coordinate of "#2015 tlml-" as the measurement basic point (default)
 - Specify the workpiece coordinate system offset (modal) as the measurement basic point

[#1283(PR)] ext19

Not used. Set to "0".

【#1284(PR)】 ext20

bit0: Spindle speed clamp check

Select whether to check the spindle speed clamp under the constant surface speed control.

- 0: Check the spindle speed clamp
- 1: Not check the spindle speed clamp. (Note) This parameter is enabled when the parameter "#1146 Sclamp" is set to "1".

Base Specifications Parameters

【#1285(PR)】 ext21

bit0: Multi-part system program management

Select whether to use multi-part system program management.

0: Not use 1: Use

(Note) When this parameter's value is changed, the power must be turned OFF and ON, and the system formatted. Two or more part systems from [1] to [4] need to be set to "1" in "#1001 SYS_ON". Otherwise this parameter will be disabled even though set to

bit1: Program search type switch

Select how to search a program to operate.

- O: Operation search is performed in the selected part system.
 Operation search is performed for all part systems. (The program No. will be common to all part systems.)

bit2: Multi-part system program generation and operation

Select whether to perform the following processes for all the part systems or for each part system separately in multi-part system program management: newly create, delete or rename the machining programs in NC memory (including MDI program and machine tool builder macro program) or transfer, compare, merge the programs between NC memory and other device

- Perform these processes for the programs in all part systems. If no subprogram contents are found by the subprogram call during automatic operation, the program will be searched for from \$1
- Perform these processes for the programs in the selected part system.

【#1286(PR)】 ext22

bit2: O No. for program input No.

Select the operation when the same program No. is input during data input. 0: The O No. is handled as a character string data.

- 1: The O No. is handled as a program No. Whether to overwrite the program or cause an error is decided by "#1218 bit7 Input by program overwrite"

bit3: No O No. at machining program input

Select whether to enable the machining program input even if there is no program No. (O

- The program No. is fixed to 01 in this case.
 - 1. Enable

bit5: Selection of multi-part system program input/output method

Select whether to perform the transfer from NC memory to other device for all the part systems or for each part system separately in multi-part system program management.

0: Output the designated programs for all the part systems.

Output the programs of only the selected part system.

[#1287(PR)] ext23

bit1: Inclined surface coordinate display (for M system only)

- 0: Display the position which includes tool length offset.
- 1: Display the position on the program which excludes tool length offset.

bit2: Inclined surface coordinate display (for M system only)

- 0: Display the position which includes tool radius compensation.
- 1: Display the position on the program which excludes tool radius compensation.

bit4: Relative coordinate display

- (M system)
- 0: Display the position which includes tool length offset.
- 1: Display the position on the program which excludes tool length offset.
- (L system)
- isplay the position which includes tool shape compensation.
- 1: Display the position on the program which excludes tool shape compensation.

bit5: Relative coordinate display

(M system)

- 0: Display the position which includes tool radius compensation.
- 1: Display the position on the program which excludes tool radius compensation.
- (L system)
- 0: Display the position which includes nose R compensation.
- 1: Display the position on the program which excludes nose R compensation.

bit6: Absolute coordinate display

Select how coordinate values are displayed when absolute coordinate display is selected ("#1221 aux05/bit0"="1").

- (M system)
- 0: Display the position which includes tool length offset. 1: Display the position on the program which excludes tool length offset.
- (L system)
- 0: Display the position which includes tool shape compensation.

1: Display the position on the program which excludes tool shape compensation.

Select how coordinate values are displayed when absolute coordinate display is selected ("#1221 aux05/bit0"="1"). (M system)

- 0: Display the position which includes tool radius compensation.
- 1: Display the position on the program which excludes tool radius compensation.
- (L system)
 0: Display the position which includes nose R compensation
- 1: Display the position on the program which excludes nose R compensation.

[#1288(PR)] ext24

bit0: MDI program clear

Select whether to clear the MDI programs when MDI operation ends, the power is turned ON again, reset is input, or emergency stop is canceled.

- 0: Not clear.
- 1: Clear (save only % programs).

[#1289(PR)] ext25

bit0: Tool radius compensation switch corner judgment method (Nose R comp.)

Select the criterion to execute the outer rounding at the small corner in tool radius compensation

- (L system)
- 0: The corner angle is 0°; linear-linear; G02-G03/G03-G02; the radius is the same. (Conventional method)

 1: The corner angle is 1° or smaller; linear-linear; G02-G03/G03-G02; the radius is
- almost the same. (Method for rounding minute corner angle)
- (M system)
- 0: The corner angle is 1° or smaller: linear-linear: G02-G03/G03-G02, (Conventional method)
- 1: The corner angle is 1° or smaller; linear-linear; G02-G03/G03-G02; the radius is almost the same. (Method for rounding minute corner angle)

bit0: Multiple spindle control II

Select multiple spindle control I or II.

Multiple spindle control I (L system only)
 Multiple spindle control II (select from ladder)

bit7: Spindle synchronization command method

Select the spindle synchronization command method.

0: Spindle synchronization with PLC I/F

Spindle synchronization with machining program

[#1301] nrfchk Near reference position check method

Select the method to judge the "near reference position".

- 0: Conventional method
- 1: Command machine position is used.
- 2: Feedback position is used.

[#1302] AutoRP Automatic return by program restart

Select the method to move to the restart position when restarting the program.

- 0: Move the system manually to the restart position and then restart the program
- 1: The system automatically moves to the restart position at the first activation after the program restarts.

[#1303(PR)] V1comN No. of #100 address part system common variables

Set the number of common variables, common for part systems, starting from address #100

This is valid only when "#1052 MemVal" is set to "1".

---Setting range 0 to 100

[#1304(PR)] V0comN No. of #500 address part system common variables Set the number of common variables, common for part systems, starting from address

#500 This is valid only when "#1052 MemVal" is set to "1".

-Setting range

0 to 500

[#1306] InpsTyp Deceleration check specification type

Select the parameter specification type for the G0 or G1 deceleration check.

0: Deceleration check specification type 1 G0 is specified with "#1193 inpos", and G1+G9 with "#1223 aux07/bit1".

Deceleration check specification type 2
 G0 or G1+G9 is specified with "#1193 inpos".

[#1309(PR)] GType Switch command format

Select which is used to command the reverse tap

0: G84.1/G88.1

1: D command with the value changed to negative

[#1310] WtMmin Minimum value for synchronization M code

Set the minimum value for the M code. When "0" is set, the synchronization M code will be invalid

---Setting range

0, 100 to 99999999

[#1311] WtMmax Maximum value for synchronization M code

Set the maximum value for the M code. When "0" is set, the synchronization M code will be invalid.

---Setting range

0, 100 to 99999999

Base Specifications Parameters

[#1312] T_base Tool life management standard number

Set the standard No. for the tool life management.

When the value specified by the T code command exceeds the set value in this parameter, the set value will be subtracted from the command value, which will be used as tool group No. for tool life management.

Not. but tool life transgerifiers. When I code command is equal to or less than the set value, the T code will be handled as a normal T code and not subjected to tool life management. When 'D' is set in this parameter, the T code command will always specify a group No.

(Valid for M-system tool life management II.)

---Setting range 0 to 9999

[#1313] TapDw1 Synchronous tap hole bottom wait time

Set the hole bottom wait time for synchronous tapping.

When P address is specified, the greater value will be used as the hole bottom wait time When an in-position check is performed at the hole bottom, the wait time will be provided after the completion of the in-position check.

(Note) This parameter is valid only when "1" is set in "#1223 aux07/bit3" (synchronous tap in-position check improvement) and "#1223 aux07/bit4" (synchronous tap hole bottom in-position check).

---Setting range

0 to 999 (ms)

[#1314] TapInp Synchronous tap in-position check width (tap axis)

Set the hole bottom in-position check width for synchronous tapping.

(Note) This parameter is valid only when "1" is set in "#1223 aux07/bit3" (synchronous tap in-position check improvement) and "#1223 aux07/bit4" (synchronous tap hole bottom in-position check).

---Setting range

0 000 to 99 999

[#1316(PR)] CrossCom Reference of common variables common for part systems

Select whether to use the common variables from #100100 to #800199.

0: Not use 1: Use

This parameter is valid only when the number of variable sets is set to 600 or more. When this parameter is set to *1*, variables from #100100 to #100110 will not be available as the system variables for PLC data read function, and the setting of #1052 MemVal* will be invalid.

[#1324(PR)] Chop_R Chopping compensation value fixing method

Set the head No, of the R register used as the compensation amount save area during fixed compensation amount method.

When the first number is an odd number, the operation message "Setting error" appears.

When the value overlaps with the chopping control data area, the operation message

"Setting error" appears. ---Setting range

8300 to 9782

(Only the even number)

(Within backup area)

[#1326] PLC Const Ext. Num PLC constant extension number

Set the number of PLC constant extension points

---Setting range-

0 to 750

[#1327] 3D ATC type Tool change method specification

Select the tool change method for determining the tool to draw solids.

With 3D drawing, the tool will be changed by the method designated with this parameter, and then the image will be drawn.

0: With one standby tool

1: With two standby tools 2: With no standby tool

[#1328] TLM type Tool measurement standard positions election

Select the tool measurement method.

0: Use the machine position at TLM switch ON as 0.

Use the machine basic point as standard.

[#1329] Emgcnt Emergency stop contactor shut-off time

Set the time taken for the drive section's main power to be shut-off when the confirmation of all the axes' stop failed after the emergency stop state. The contactor shut-off signal is output as soon as all the axes are confirmed stopped if the

confirmation is done prior to the set time

When there is no safety observation option or "0" is set, the shut-off time will be 30(s).

---Setting range

0 to 60 (s)

[#1330(PR)] MC_dp1 Contactor weld detection device 1

When safety observation is executed, set the remote I/O device to input the contactor's auxiliary b contact signal used for the contactor weld detection.

If "0" is set, weld detection will not be executed.

---Setting range

0000 to 02FF (HFX)

Base Specifications Parameters

[#1331(PR)] MC_dp2 Contactor weld detection device 2

When safety observation is executed, set the remote I/O device to input the contactor's auxiliary b contact signal used for the contactor weld detection.

If "0" is set, weld detection will not be executed.

---Setting range 0000 to 02FF (HEX)

[#1332(PR)] F-bus init delay Fieldbus communication error invalid time

Tuning the power ON, start the communication, and then set the time where Fieldbus communication error is not detected Set this in 0.1 second increment.

-Setting range 0 to 255 (0.1s) Standard: 0

[#1333] LMC restrain Lost motion compensation restraint in handle mode

Select whether to restrain the lost motion compensation in handle mode.

1. Not restrain

【#1334】 DI/DO refresh cycl DI/DO refresh cycle

Select the DI/DO refresh cycle

0: Standard mode 1: High-speed mode

2: High-speed mode 2

(Note 1) This setting is valid only for M700VW/M700VS/M700/M70V Series and M70(typeA). "Standard mode" is applied to M70 (typeB) regardless of this parameter.

(Note 2) The speed may not be high if number of ladder steps is excessive.

(Note 3) If high-speed mode is selected, the fine segment processing performance may degrade.

[#1335] man_smg Manual feed acceleration/deceleration selection

Select the acceleration/deceleration mode in jog feed, incremental feed and manual reference position return (when rapid traverse signal OFF).

0: Acceleration/Deceleration for rapid traverse 1: Acceleration/Deceleration for cutting feed

[#1336(PR)] #400_Valtype #400 address variable type

Select whether the #400-level variables are used as machine tool builder macro variables or as common variables

0: #400 to #449 are not available: #450 to #499 are used as machine tool builder macro

1: #400 to #499 are used as common variables

(Note) 700 sets or more of common variables are required for using #400 to #499 as common variables. If this parameter is set to "1" while the number of common variables is set to less than 700, this parameter setting will be regarded as "0".

[#1338(PR)] rev data save trg Trigger switching to save arbitrary reverse run data

Select the condition to start/stop saving reverse run data.

0: Start when the reverse run control mode signal is turned ON. Stop when turned OFF.

1: Start when the reverse run control mode signal is ON and macro interrupt is valid (M96/ION).

Stop when the reverse run control mode signal is OFF or macro interruption is finished (M97/IOF) (compatible with M500M).

[#1339(PR)] MC_dp3 Contactor weld detection device 3

When safety observation is executed, set the remote I/O device to input the contactor's auxiliary b contact signal used for the contactor weld detection. If "0" is set, weld detection will not be executed.

---Setting range 000 to 02FF (HEX)

[#1340(PR)] MC_dp4 Contactor weld detection device 4

When safety observation is executed, set the remote I/O device to input the contactor's auxiliary b contact signal used for the contactor weld detection.

If "0" is set, weld detection will not be executed.

---Setting range 000 to 02FF (HEX)

[#1341(PR)] ssc_rio Safety observation remote I/O connection

Assign the safety observation function's door switch input device and contactor shutoff output device to the remote I/O.

Select whether to enable or disable the assignment. 0: Disable

1: Enable

H - 85

Base Specifications Parameters

[#1342] AlmDly Alarm display delay time

Set a time between when an operation alarm occurs and when the alarm display and signal turn ON

When set to "0", the alarm display and signal will turn ON immediately after the alarm

occurrence.

When set to "-1", the alarm display and signal will not turn ON after the alarm occurrence

Target alarms:

M01 External interlock axis found 0004

M01 Internal interlock axis found 0005 M01 Sensor signal illegal ON 0019

M01 No operation mode 0101

---Setting range

-1 to 30000 (ms)

[#1349(PR)] DOOR_1 Door 1 switch input device

Set a remote I/O device to input the door sensor signal to detect Door 1's status in safety observation

When "0" is set, the door is always detected to be open. Thus, "X0" cannot be used as Door 1 switch input device.

--Setting range

0000 to 02FF (HEX)

[#1350(PR)] DOOR_2 Door 2 switch input device

Set a remote I/O device to input the door sensor signal to detect Door 2's status in safety

observation.

When "0" is set, the door is always detected to be open.

Thus, "X0" cannot be used as Door 2 switch input device.

---Setting range

0000 to 02FF (HEX)

[#1353(PR)] MC_ct1 Contactor shutoff output 1 device

Set a device of an output remote I/O device to control contactor in safety observation. When set to '0", contactor shutdff output is disabled. Thus, "Y0" cannot be used as contactor shutdff output device.

-Setting range

0000 to 02FF (HEX)

[#1357(PR)] mchkt1 Contactor operation check allowed time 1

Set a period of time until emergency stop is issued when a contactor does not operate ever though contactor shutoff output 1 is output.

If the vertical axis drop prevention function is used, set a value bigger than the vertical axis drop prevention time (SV048 EMGrt).

When "0" is set, the contactor operation check will be disabled.

-Setting range

0 to 30000 (ms)

[#1361(PR)] aux_acc Auxiliary axis acceleration/deceleration type

Select the acceleration/deceleration type of auxiliary axis in PLC axis indexing.

0: Acceleration/deceleration with constant time

1: Acceleration/deceleration with a constant angle of inclination

[#1365] manualFtype Manual speed command type

Select the manual speed command type

0: Manual speed command

The axis travels at the handle/jog feed rate

Reverse run is performed for each part system independently of the other ones. 1: Manual speed command 2

In a multi-part system configuration, the axis travels at the handle/jog feed rate

multiplied by the ratio of each part system's program command speeds.

When the block start point is reached in reverse run in any of the part systems, the axes in the other part systems stop simultaneously.

[#1366] skipExTyp Multi-system simultaneous skip command

Select the operation when G31 is commanded in more than one part system.

(Note) When set to "1", the skip coordinate position will always be "0" whether G31 is commanded in a single part system or in one part system of a multi-part system. Set to "0" when using G31 command for measurement etc.

0: Carry out G31 command in one part system, while the G31 is kept in an interlocked state in the other systems Carry out G31 command simultaneously in more than one part system.

Note that the skip coordinate is not read and so the skip coordinate value will be 0.

[#1367] G1AccOVRMax Max. override value for cutting feed constant inclination acc./dec.

Set the maximum override value to be applied to the cutting feed that is in constant inclination acceleration/deceleration.

When the setting of this parameter is between 0 and 99, the override value is handled as 100% even though the specified cutting feed override is over 100%.

--Setting range

0 to 300(%)

Base Specifications Parameters

[#1493(PR)] ref_syn Synchronization at zero point initialization

- 0; Primary axis and second axis determine their zero points individually.
- The zero points of both primary and secondary axes are determined by initializing the primary axis' zero point.

The secondary axis moves in perfect synchronization with the primary axis. Set this to "1" for speed/current command synchronization control.

[#1494(PR)] dsp_ax_change Axis order of counter display

Set this in order to change the axis order of counter display.

The axes will be displayed in ascending order of the setting values "1" to "8". However, axis whose setting is "0" will be displayed after axes whose settings are between "1" and "8" are displayed.

- (Note 1) When the same value is set for more than one axis, axis that is displayed on the left side on the parameter screen will be first displayed.
- (Note 2) When both of the mixed control (cross axis control) and interchange coordinate position display ("1280 ext16/bit2" OFF) are valid, and when there are two or more valid part systems, this parameter will be ignored.
- ---Setting range

 - 1 to 8: Axes are displayed in ascending order.

 Other than 1 to 8: Axes are displayed after the display of the axes with setting value "1" to "8"

[#1495(PR)] grf_ax_direction Axis travel direction in 2D graphic

Select the axis travel direction in the 2D graphic drawing (trace, check). If set to 1, the positive/negative directions are reversed

---Setting range-

0/1

[#1501] polyax Rotational tool axis number (for L system only)

Set the number of the rotational tool axis used for polygon machining (G51.2). Set "0" when not using polygon machining (spindle-servo axis), or when using spindle-spindle polygon machining. A value exceeding the base specification parameter "#1002 axisno" cannot be specified

This parameter is valid when the G code system is 6 or 7 (7 or 8 is set in base specification parameter "#1037 cmdtyp").

[#1502] G0lpfg G1 -> G0 deceleration check

Select whether to perform a deceleration check when the travel direction is changed from G1 to G0.

- 0: Not perform 1: Perform

[#1503] G1Ipfg G1 -> G1 deceleration check

Select whether to perform a deceleration check when the travel direction is changed from

- 0: Not perform

[#1505] ckref2 Second reference position return check

Select whether the check is carried out at the specified position in manual second reference position return mode upon completion of spindle orientation or at second reference position return interlock signal.

- Upon completion of spindle orientation
 At second reference position return interlock signal

[#1506] F1_FM Upper limit of F1-digit feedrate

Set the maximum value up to which the F 1-digit feedrate can be changed.

- ---Setting range
 - 0 to 1000000 (mm/min)

[#1507] F1_K F 1-digit feedrate change constant

Set the constant that determines the speed change rate per manual handle graduation in F 1-digit feedrate change mode.

- ---Setting range
 - 0 to 32767

[#1510] DOOR_H Shorten door interlock II axis stop time

Select whether to shorten the time during which the axis is stopped when the door is opened.

- Use the conventional axis stop time.
 Shorten the axis stop time.

(Note) When the door interlock II signal is input via a ladder, the conventional axis stop time will be used

Base Specifications Parameters

[#1511] DOORPm Signal input device 1 for door interlock II: for each part system

Set the fixed device number (X??) for door interlock II signal input for each part system. A device number from X01 to XFF can be specified.(Except X100.) Device number '000'' is invalid.

Set device number "100" when using no fixed device number for door interlock II signal input

Related parameter: "#1154 pdoor (Door interlock II for each part system) "

---Setting range

000 to 2FF (hexadecimal)

[#1512] DOORPs Signal input device 2 for door interlock II: for each part system

Set the fixed device number (X??) for door interlock II signal input for each part system.

(Set the same value as that of #1155.)
Related parameter: "#1154 pdoor (Door interlock II for each part system)"

--Setting range

000 to 2FF (hexadecimal)

[#1513] stapM M code for synchronous tap selection

Set the M code for the synchronous tapping selection

Select the synchronous tapping mode using the miscellaneous function code of the value set in this parameter. The M function command can be issued immediately before the tap command or in the same block. This function is valid only when "1" is set in "#1272 ext08/ bit1 (Enable/disable M-function synchronous tap cycle)"

(Note) Do not use M00, 01 02, 30, 98, and 99,

---Setting range-

0 to 99999999

[#1514] expLinax Exponential function interpolation linear axis

Set the axis name for the linear axis used in exponential function interpolation.

---Setting range---

A to 7

[#1515] expRotax Exponential function interpolation rotary axis

Set the axis name for the rotary axis used in exponential function interpolation.

--Setting range-

A to 7

[#1516] mill_ax Milling axis name

Set the name of the rotary axis used in milling interpolation. Only one rotary axis can be set. When there is no E command in issuing the G12.1 command, this parameter will be followed

---Setting range-

A to Z

[#1517] mill_C Milling interpolation hypothetical axis name

Select the hypothetical axis command name for milling interpolation.

When there is no D command in issuing the milling interpolation command, this parameter will be followed.

0: Y axis command

1: Command rotary axis name.

[#1518] polm Spindle-spindle polygon Workpiece spindle No.

Set the workpiece axis No. used in spindle-spindle polygon machining. (Note) The 1st spindle will be selected when "0" is set.

[#1519] pols Spindle-spindle polygonTool spndle No.

Set the number of the rotary tool spindle used in spindle-spindle polygon machining. (Note) The 2nd spindle will be selected when "0" is set.

[#1520(PR)] Tchg34 Additional axis tool compensation operation (for L system only)

Select axis to carry out the additional axis' tool compensation function.

0: 3rd axis. 1: 4th axis.

[#1521] C_min Minimum turning angle

Set the minimum turning angle of the normal line control axis at the block joint during normal line control

---Setting range

0.000 to 360.000 (°) (Input setting increment applies)

[#1522(PR)] C_axis Normal line control axis

Set the number of the axis for normal line control.

Set a rotary axis No.

0: Normal line control disabled

1 to 8: Axis No. (number of control axes)

Base Specifications Parameters

[#1523] C_feed Normal line control axis turning speed

Set the turning speed of the normal line control axis at the block joint during normal line

Set a value that does not exceed the normal line control axis' clamp speed ("#2002 clamp"). This is valid with normal line control type I.

-Setting range

0 to 1000000 (°/min)

[#1524] C_type Normal line control type

Select the normal line control type

- 0: Normal line control type
 - 1: Normal line control type II

[#1533] millPax Pole coordinate linear axis name

Set the linear axis name used for pole coordinate interpolation.

Setting range

Axis name such as X, Y or Z

[#1534] SnG44.1 Spindle No. for G44.1 command

Set the selected spindle No. for the G44.1 command.

The setting range differs according to the model.

If a spindle that does not exist is set, the 2nd spindle will be used. Note that if there is only

one spindle, the 1st spindle will be used.

- 0: 2nd spindle
- 1: 1st spindle
- 2: 2nd spindle 3: 3rd spindle
- 4: 4th spindle
- 5: 5th spindle 6: 6th spindle

[#1535] C_leng Minimum turning movement amount

Set the minimum turning movement amount of the normal line control axis at the block joint during normal line control.

---Setting range

0.000 to 99999.999 (mm) (Input setting increment applies)

[#1537] crsax[1] Mixed control (cross axis control) axis

Set the axis to be interchanged during the mixed control (cross axis control)

Using two digits, set the name of the axis to be interchanged with the axis in the part system where the mixed control (cross axis control) request signal is input, or the name of the axis to be shifted to that part system.

---Setting range-

Two digits between A to Z and 1 to 9 (Setting will be cleared when "0" is set)

[#1538] crsax[2]

Set the axis to be interchanged during the mixed control (cross axis control)

Using two digits, set the name of the axis to be interchanged with the axis in the part system where the mixed control (cross axis control) request signal is input, or the name of the axis to be shifted to that part system.

---Setting range-

Two digits between A to Z and 1 to 9 (Setting will be cleared when "0" is set)

[#1539] crsax[3]

Set the axis to be interchanged during the mixed control (cross axis control)

Using two digits, set the name of the axis to be interchanged with the axis in the part system where the mixed control (cross axis control) request signal is input, or the name of the axis to be shifted to that part system.

---Setting range-

Two digits between A to Z and 1 to 9 (Setting will be cleared when "0" is set)

[#1540] crsax[4]

Set the axis to be interchanged during the mixed control (cross axis control)

Using two digits, set the name of the axis to be interchanged with the axis in the part system where the mixed control (cross axis control) request signal is input, or the name of the axis to be shifted to that part system.

---Setting range-

Two digits between A to Z and 1 to 9

(Setting will be cleared when "0" is set)

[#1541] crsax[5]

Set the axis to be interchanged during the mixed control (cross axis control).

Using two digits, set the name of the axis to be interchanged with the axis in the part system where the mixed control (cross axis control) request signal is input, or the name of the axis to be shifted to that part system.

---Setting range

Two digits between A to Z and 1 to 9

(Setting will be cleared when "0" is set)

[#1542] crsax[6]

Set the axis to be interchanged during the mixed control (cross axis control).

Using two digits, set the name of the axis to be interchanged with the axis in the part system where the mixed control (cross axis control) request signal is input, or the name of the axis to be shifted to that part system.

-Setting range

Two digits between A to Z and 1 to 9 (Setting will be cleared when "0" is set)

[#1543] crsax[7]

Set the axis to be interchanged during the mixed control (cross axis control).

Using two digits, set the name of the axis to be interchanged with the axis in the part system where the mixed control (cross axis control) request signal is input, or the name of the axis to be shifted to that part system.

-Setting range

Two digits between A to Z and 1 to 9

(Setting will be cleared when "0" is set)

[#1544] crsax[8]

Set the axis to be interchanged during the mixed control (cross axis control).

Using two digits, set the name of the axis to be interchanged with the axis in the part system where the mixed control (cross axis control) request signal is input, or the name of the axis to be shifted to that part system.

-Setting range

Two digits between A to Z and 1 to 9 (Setting will be cleared when "0" is set)

[#1561] 3Dcdc Switch workpiece coordinate display during 3D coordinate conversion

Select the workpiece coordinate display during 3D coordinate conversion.

0: Workpiece coordinate syster

1: G68 program coordinaté system

(Note) The special display unit's absolute coordinates also follow this parameter setting.

[#1562] 3Dremc Switch remaining command display during 3D coordinate conversion

Select the remaining command display during 3D coordinate conversion.

0: Workpiece coordinate system

1: G68 program coordinate system

[#1563] 3Dcdrc Switch coordinate reading during 3D coordinate conversion

Select the coordinate system of the workpiece/skip coordinate read value in the 3D coordinate conversion modal.

0: G68 program coordinate system

Workpiece (local) coordinate system

[#1564] 3Dspd Hole drilling speed during 3D coordinate conversion

Select the rapid traverse rate for the hole drilling cycle during 3D coordinate conversion.

The cutting feed clamp speed is used.

Other than 0: The set speed is used.

Note that if the rapid traverse rate is exceeded, the speed will be clamped at the rapid traverse rate

---Setting range-

0 to 1000000mm/min

[#1565] helgear Helical machining base axis

Set the base axis for helix angle calculation in helical machining. When no setting, Z axis will be used

---Setting range-

Axis name such as X, Y, Z, U, V, W, A, B, and C

[#1566] 3DSelctDrillaxMode Switch drill axis's mode from rapid traverse during 3D e conversion

Select the rapid traverse mode in non-drilling blocks among a drilling cycle to the cutting feed mode during 3-dimensional coordinate conversion.

O: Rapid traverse mode. The speed follows the setting of "#2001 rapid"
1: Cutting feed mode. The speed follows the setting of "#1564 3Dspd".

[#1568] SfiltG1 G01 soft acceleration/deceleration filter Set the filter time constant for smoothly changing the acceleration rate for the cutting feed acceleration/deceleration in pre-interpolation acceleration/deceleration.

---Setting range-

0 to 200 (ms)

Displays the notch frequency(Hz) for the S-pattern filter set in "#1568 SfiltG1 (G01 soft acceleration/deceleration filter)

[#1569] SfiltG0 G00 soft acceleration/deceleration filter

Set the filter time constant for smoothly changing the acceleration rate for the rapid traverse acceleration/deceleration in pre-interpolation acceleration/deceleration.

---Setting range

0 to 200 (ms)

Base Specifications Parameters

[#1570] Sfilt2 Soft acceleration/deceleration filter 2

Set the filter time constant for smoothly changing the acceleration rate in pre-interpolation acceleration/deceleration

This will be disabled when "0" or "1" is set.

---Setting range

0 to 50 (ms)

Displays the notch frequency(Hz) for the S-pattern filter set in "#1570 Sfilt2 (Soft acceleration/deceleration filter 2)

[#1571] SSSdis SSS control adjustment coefficient fixed value selection

Fix the shape recognition range for SSS control.

[#1572] Cirorp Arc command overlap

This eliminates speed fluctuations at the joint of the arc and straight line and arc and arc. Set as a bit unit.

- 0: Do not overlap the arc command blocks
- 1: Overlap the arc command blocks
- bit0 : Arc command during high-speed high-accuracy control II
- bit1 : Arc command during high-speed machining mode II
- bit2: Arc command during high-accuracy control (G61.1)

bit3: Arc command during cutting mode (G64)

The line command block and arc command block won't be overlapped during G61.2 modal regardless of this setting.

(Note) This parameter is invalid during SSS control.

[#1573] Ret1 Return type 1

Select the axis to be moved later after tool return.

This is referred to with the movement path (transit point #1 -> interrupt point). Up to eight axes can be specified by expressing one axis with one bit.

bit0: Transit point #1 1st axis

bit1: Transit point #1 2nd axis

bit2: Transit point #1 3rd axis

bit3: Transit point #1 4th axis

bit4: Transit point #1 5th axis bit5: Transit point #1 6th axis

bit6: Transit point #1 7th axis

bit7: Transit point #1 8th axis

---Setting range

00000000 to 11111111 (Binary)

[#1574] Ret2 Return type 2

Select the axis to be moved later after tool return

This is referred to with the movement path (return start point -> transit point #2).

Up to eight axes can be specified by expressing one axis with one bit.

bit0 : Transit point #2 1st axis

bit1: Transit point #2 2nd axis

bit2: Transit point #2 3rd axis

bit3: Transit point #2 4th axis

bit4: Transit point #2 5th axis bit5: Transit point #2 6th axis

bit6: Transit point #2 7th axis

bit7: Transit point #2 8th axis

---Setting range-

00000000 to 11111111 (Binary)

Base Specifications Parameters

[#1590] Animate ax direct Machine status animated display axis direction(+/-)

<bit0>

0: 1st axis + direction is set to the right direction.
1: 1st axis + direction is set to the left direction.

0: 2nd axis + direction is set to the rear direction.
1: 2nd axis + direction is set to the front direction.

<hit2>

0: 3rd axis + direction is set to the top direction.
1: 3rd axis + direction is set to the bottom direction.

[#1591] Animate ax-1 Machine status animated display axis name (1st axis)

Set the name of the 1st axis displayed with the machine status animation. When the axis name is not specified, the current 1st axis name ("#1013 axname") will be used.

---Setting range---

Axis name such as X, Y, Z

[#1592] Animate ax-2 Machine status animated display axis name (2nd axis)

Set the name of the 2nd axis displayed with the machine status animation. When the axis name is not specified, the current 2nd axis name ("#1013 axname") will be used.

---Setting range

Axis name such as X, Y, Z

[#1593] Animate ax-3 Machine status animated display axis name (3rd axis)

Set the name of the 3rd axis displayed with the machine status animation. When the axis name is not specified, the current 3rd axis name ("#1013 axname") will be used.

---Setting range-

Axis name such as X, Y, Z

[#1901(PR)] station addr

Not used. Set to "0".

[#1902(PR)] Din size

Not used. Set to "0"

【#1903(PR)】 Dout size

Not used. Set to "0".

[#1904(PR)] data length

Not used. Set to "0".

[#1905(PR)] baud rate

Not used. Set to "0"

[#1906(PR)] stop bit

Not used. Set to "0".

[#1907(PR)] parity check

Not used. Set to "0".

[#1908(PR)] even parity

Not used. Set to "0"

[#1909(PR)] Tout (ini)

Not used. Set to "0".

【#1910(PR)】 Tout (run)

Not used. Set to "0"

【#1911(PR)】 clock select

Not used. Set to "0".

[#1925] EtherNet Start of service

Start or stop the Ethernet communication function.

0: Stop

1. Start

[#1926(PR)] Global IP address IP address

Set the main CPU's IP address. Set the NC IP address seen from an external source.

[#1927(PR)] Global Subnet mask Subnet mask

Set the subnet mask for the IP address.

Base Specifications Parameters

[#1928(PR)] Global Gateway Gateway

Set the IP address for the gateway.

[#1929] Port number Port No.

Set the port No. for the service function.

---Setting range

1 to 9999

(Set 2000 when not connected to the Ethernet.)

【#1930(PR)】 Host address Host address

Set the host's IP address

[#1931(PR)] Host number Host No.

Set the host's port No.

---Setting range 1 to 9999

[#1934(PR)] Local IP address

Set the HMI side CPU's IP address.

(Note) This parameter is valid only for M700/M700VW Series.

【#1935(PR)】 Local Subnet mask

Set the HMI side CPU's subnet mask.

(Note) This parameter is valid only for M700/M700VW Series.

[#11001(PR)] APC type APC screen display type selection

Set the type of screen displayed with the pallet program registration screen.

- Standard pallet registration screen
- 1: Pallet 4-page registration screen

[#11002(PR)] Valid pallet num Number of pallets setting

Set the number of pallets validated on the pallet program registration screen.

- ---Setting range
 - 2 to 12 (Interpreted as 2 when 0 is set.)

[#11003(PR)] APLC valid APLC valid

Temporarily disable APLC

Normally set "1" 0: Disable

- 1: Enable

[#11004(PR)] PLCauto-run enable PLC automatic startup valid

Select starting condition of the built-in PLC 0: Start PLC after NC screen startup 1: Start PLC at NC startup

- (Note) When standard NC screen is not used, set "1".

[#11005(PR)] PC IP address IP address setting

Set the IP address for the display unit or PC in which machining programs are stored. Set the IP address for the display unit on which the automatic power OFF will be executed. When the 3D machine interference check function is enabled, set the IP address of the display unit that is used for the 3D machine interference check (for M700VW only). (Note 1) When "0.0.0.0" is input, "192.168.100.2" is automatically set.

(Note 2) This parameter is valid only for M700VW/M700 Series.

PC Subnet

Set the subnet mask for the display unit or PC in which machining programs are stored.

Set the gateway for the display unit or PC in which machining programs are stored.

[#11006] PC Port number Port No. setting

Set the port No. for the display unit or PC in which machining programs are stored

(Note 1) When "0" is input, "55555" is automatically set.

(Note 2) When changing the parameter, set the same value in "PD_Control_Port" in the PC side environment setting file.

--Setting range

0 to 65535

[#11007] PC Timeout Communication timeout time setting

Set the NC side communication timeout time (Note 1) When "0" is input, "30" is automatically set.

(Note 2) When the value greater than "300" is set, a setting error occurs.

(Note 3) When changing the parameter, set the same value in "PD_Time_out" in the PC side environment setting file.

---Setting range

0 to 300 (s)

Base Specifications Parameters

[#11009(PR)] M2 label O M2 label O

Select the program number label when using the M2 format.

1: Label C

[#11010(PR)] Software keyboard Software keyboard

Select with touch panel whether to use software keyboard.

0: Do not use

1: Use

2: Use (Note1)

(Note1) Software keyboard automatically appears on a specific screen. (For M700VS/ M70V/M70 Series only).

[#11011] Handy TERM. PW. Handy terminal password

Set the password used for the handy terminal customized downloading. Blank (when "0" is set) and "0000" are regarded as no password.

Not the password of a new customizing file but the password of the customizing file downloaded to the last handy terminal is set

Set blank or "0000" when initially downloading

---Setting range

0000 to 9999

[#11012(PR)] 16 axes for 1ch Connecting 16 axes for 1ch

Select the maximum number of axes (sum of the NC axis, spindle, and PLC axis) connected to the drive unit interface (channel 1) when not using the extension unit (FCU7-EX891+HN552)

0: Up to 8 axes can be connected to channel 1.

1: Up to 16 axes can be connected to channel 1. This parameter is disabled when the extension unit is connected. It is possible to connect only up to eight axes or less per channel

[#11013] 3D_MChk Invalidate 3D machine interference check

Select whether to enable the 3D machine interference check function

0: Enable

1: Disable

[#11014] Chk_len1 1st-step interference check distance

Set the 1st-step check distance when in 3D machine interference check mode.

The standard value is "30.000"

---Setting range

0.000 to 99999.999(mm)

[#11015] Chk_len2 2nd-step interference check distance

Set the 2nd-step check distance when in 3D machine interference check mode.

The standard value is "5.000".

---Setting range 0.000 to 99999.999(mm)

【#11016】 Expand_Rate Shape expansion rate

Set the model shape expansion rate to be used for 3D machine interference check. This parameter is used for expanding a model shape to be used for 3D machine interference check. The interference check is performed using a shape expanded by the amount of [Check length (mm) x Shape expansion rate (%)]

---Setting range

0 to 300(%)

【#11017】 T-ofs set at run

Select whether to enable the tool compensation amount setting and life value setting during automatic operation and operation pause.

0: Disable 1: Enable

[#11018] M password hold

elect whether to enable the "Machine user" password holding. When this is set to "1", the 'Machine user" password will be held.

0: Disable

1: Enable

[#11019] 2-system display 2-part system simultaneous display

Select whether to validate 2-part system simultaneous display on operation screen.

Display one part system on operation screen

1: Display two part systems simultaneously on operation screen 2: Display two part systems simultaneously (Display type 2) on operation screen

(Note 1) Unless you set "1" in two or more of "#1001 SYS ON [1] to [4]", two-part system simultaneous display will fail regardless of this parameter

[#11021] PLC mesg disp type Format of PLC alarm and operator message

Select the format of PLC alarms and operator messages to be displayed on the bottom right of the screen.

0: Display up to the first 40 characters

If text is longer than 40 characters, divide it into two and display separately. (Classification No. is displayed together)

Base Specifications Parameters

[#11022] SRAM Output Type SRAM output type

Set the SRAM output type.

(Note) In M700 Series, the conventional SRAM output type is set regardless of the setting of this parameter

0: The latest SRAM output type is set.

(Not compatible with F3 and versions older than F3.)

The conventional SRAM output type is set.
 (Compatible with F3 and versions older than F3.)

[#11023] G33.n Drn G33.n dryrun

Select whether to enable dry run in C axis interpolation type thread cutting. The standard setting is "0". 0: Enable 1: Disable

[#11024] G33.n fhd G33.n feed hold

Select whether to enable feed hold in C axis interpolation type thread cutting. The standard setting is "0".

0: Disable
1: Enable

[#11028] Tolerance Arc Cent Tolerable correction value of arc center error

Set the tolerable correction value for the calculated coordinate value error of R-specified circular center

When a difference between "a line between the start and end points" and "commanded radius x 2" is the tolerance or smaller, the error is corrected so that the middle of a line between the start and end points will be the arc center.

When [Setting value < 0]: 0 (Not correct)
When [Setting value = 0]: 2 x minimum setting increment

When [Setting value > 0]: Setting value

---Setting range -1 to 0 100(mm)

[#11029] Arc to G1 no Cent Change command from arc to linear when no arc center

Select the operation when arc center or radius designation is omitted from arc command.

0: Program error

1: Change into linear command

[#11030] Man tap sync cancl Synchronization cancel in manual synchronous tapping

Select whether the tapping axis in manual synchronous tapping synchronizes with the spindle

0: Synchronize with the spindle

1: Not synchronize with the spindle

[#11031(PR)] Cursor pos search Cursor position search

Select the cursor position searching method.

0: Disable

- 1: Pressing the INPUT key in [Monitr] [Edit] menu starts the operation search for the block with the cursor.
- 2: Turning ON/OFF the "Edit/Search" signal in [Monitr] [Edit] menu starts the operation
- 2: Turning ON/OFF the "Edit/Search" signal in [Monitr] [Edit] menu starts the operation 3: Turning ON/OFF the "Edit/Search" signal in [Monitr] [Edit] menu starts the operation 3: Turning ON/OFF the "Edit/Search" signal in [Monitr] [Edit] menu starts the operation 3: Turning ON/OFF the "Edit/Search" signal in [Monitr] [Edit] menu starts the operation 3: Turning ON/OFF the "Edit/Search" signal in [Monitr] [Edit] menu starts the operation 3: Turning ON/OFF the "Edit/Search" signal in [Monitr] [Edit] menu starts the operation 4: Turning ON/OFF the "Edit/Search" signal in [Monitr] [Edit] menu starts the operation 5: Turning ON/OFF the "Edit/Search" signal in [Monitr] [Edit] menu starts the operation 5: Turning ON/OFF the "Edit/Search" signal in [Monitr] [Edit] menu starts the operation 5: Turning ON/OFF the "Edit/Search" signal in [Monitr] [Edit] menu starts the operation 5: Turning ON/OFF the "Edit/Search" signal in [Monitr] [Edit] menu starts the operation 5: Turning ON/OFF the "Edit/Search" signal in [Monitr] [Edit] menu starts the operation 5: Turning ON/OFF the "Edit/Search" signal in [Monitr] [Edit] menu starts the operation 5: Turning ON/OFF the "Edit/Search" signal in [Monitr] [Edit] menu starts the operation 5: Turning ON/OFF the "Edit/Search" signal in [Monitr] [Edit] menu starts the operation 5: Turning ON/OFF the "Edit/Search" signal in [Monitr] [Edit] menu starts the signal in [Monitr] [Monitr]

[#11032(PR)] Menu sel para Ikof Validate menu selection parameter setting

Select whether to enable the setting of the "menu selection parameters" (#10501 to #10530, #10551 to #10580, and #10601 to #10630), with which the order of main menus on Monitor, Setup and Edit screens can be rearranged. And also select who is allowed to do this setting. 0: Disable

1: Enable (machine tool builder password is required)

2: Enable (users are allowed to set)

[#11033(PR)] skipB_no_sens Unconnected sensor selection when skip is set to contact B

Select the contact of the sensor which you wish to set as unconnected, when the skip signal is set to contact B

Set "1" for the contact to be unconnected.

bit0: Skip input 1

bit1: Skip input 2

bit2: Skip input 3 bit3: Skip input 4

bit4: Skip input 5

bit5: Skip input 6

bit6: Skip input 7

hit7: Skin input 8

(Note 1)This parameter is enabled when "#1258 set30/bit0" is set to "1".

(Note 2)This parameter is independent of PLC skip.

---Setting range

00000000 to 11111111 (Binary)

Base Specifications Parameters

[#11034] G12AddrCheckType Command address type to check in circular cutting

Select the type of command address to check in circular cutting.

 Regard command addresses to tried in the library.
 Regard command addresses other than D, F, I as illegal.
 Regard the command addresses H as illegal. And commands other than D,F,I and M.S.T.B are disabled.

[#11035] Sys. change limit Part system switching restriction

This restricts switching the part systems displayed on screen.

- 0: Not restrict
- 1: Disable the part system switching by pressing [\$<->\$] key on touch panel
- 2: Disable the part system switching by display switch signals(Y730 to Y733).

[#11036] meas dir judge Non-sensitive band for manual measurement direction judgment (for M system only)

Set the non-sensitive band to be used for judging the manual measurement direction. If the feedback position fluctuates widely at the axis stop, set the fluctuation width or larger value in this set the parameter.
When set to "0", the band will be 1(um).

---Setting range

0 to 1000(um) 0: 1(um)

[#12001] ManualB RectanA xH Manual feed rate B constant surface control intersecting part system axis name (horizontal)

Set the part system axis name ("#1013 axname") for the two axes that intersect with the rotary axis direction. When one of the two axes is blank, a constant speed will be applied without using constant surface speed control.

---Setting range

Axis addresses such as X, Y, Z, U, V, W, A, B, and C

[#12002] ManualB RectanA xV Manual feed rate B constant surface control intersecting part system axis name (vertical)

Set the part system axis name ("#1013 axname") for the two axes that intersect with the rotary axis direction. When one of the two axes is blank, a constant speed will be applied without using constant surface speed control.

---Setting range

Axis addresses such as X, Y, Z, U, V, W, A, B, and C

[#12003] ManualB RotCent erH Manual feed rate B constant surface control rotation cente machine position (horizontal)

Set the machine coordinate position (horizontal axis) at the center of the rotary axis

---Setting range

-99999.999 to 99999.999 (mm)

[#12004] ManualB RotCent erV Manual feed rate B constant surface control rotation center machine position (vertical)

Set the machine coordinate position (vertical axis) at the center of the rotary axis.

---Setting range-

-99999.999 to 99999.999 (mm)

[#12005(PR)] Mfig Number of M

Set the number of M that can be specified within the same block.

-Setting range

1 to 4

[#12006(PR)] Mbin M binary

BCD Data type 0

Data type 1 Unsigned binary

Data type -1 Singed binary

<For unsigned binary>
The absolute value "1" is output for "-1".
<For singed binary>
"-1" is output as "0xFFFFFFFF".

---Setting range

Data type (-1,0,1)

[#12007(PR)] Sfig Number of S

Set the number of spindles.

(Note 1) The setting range differs according to the model.

(Note 2) Sfig is set in the range of 1 to 6. However, the number of outputs by Sfig cannot be controlled. Thus, only one S command is output regardless of the Sfig setting value.

-Setting range

1 to 6

[#12008(PR)] Sbin S binary

Data type 0 BCD
Data type 1 Unsigned binary
Data type -1 Singed binary

<For unsigned binary>
The absolute value "1" is output for "-1".

<For singed binary>
"-1" is output as "0xFFFFFFFF"

(Note 1) Sbin can be set with "-1", "0" and "1", but the S command cannot be BCD output. If BCD (0) is selected for Sbin, it will be handled as a singed binary (-1).

---Setting range

Data type (-1.0.1)

【#12009(PR)】 Tfig Number of T

Set the number of T that can be specified within the same block.

---Setting range---

1 to 4

【#12010(PR)】 Tbin T binary

Data type 0 BCD

Data type 1 Unsigned binary Data type -1 Singed binary

<For unsigned binary>
The absolute value "1" is output for "-1".

<For singed binary>
"-1" is output as "0xFFFFFFFF".

---Setting range--

Data type (-1.0.1)

【#12011(PR)】 Bfig Number of B

Set the number of T that can be specified within the same block.

---Setting range---

1 to 4

[#12012(PR)] Bbin B binary

Data type 0 BCD Data type 1 Unsigned binary

Data type-1 Singed binary

<For unsigned binary>
The absolute value "1" is output for "-1".

<For singed binary>

"-1" is output as "0xFFFFFFF".

---Setting range---

Data type (-1.0.1)

[#12013] G33.n rot G33.n rotary axis name

Select the axis to use as C axis with its axis name

---Setting range---

A to Z

[#12014] G33.n ovr G33.n override

Select which spindle's override is applied in C axis interpolation type thread cutting. Setting values 1 to 6 correspond to the 1st to 6th spindles respectively.

Setting "0" disables the spindle override in thread cutting blocks: The override will be fixed

to 100%

---Setting range

0 to 6

Standard value: 0

The parameters with "(PR)" requires the CNC to be turned OFF after the settings. Turn the power OFF and ON to enable the parameter settings.

[#2001] rapid Rapid traverse rate

Set the rapid traverse feedrate for each axis.

(Note) The maximum value to be set depends on the machine specifications.

---Setting range

1 to 1000000 (mm/min)

[#2002] clamp Cutting feedrate for clamp function

Set the maximum cutting feedrate for each axis.

Even if the feedrate in G01 exceeds this value, the clamp will be applied at this feedrate.

---Setting range

1 to 1000000 (mm/min)

[#2003(PR)] smgst Acceleration and deceleration modes

Set acceleration and deceleration control modes.

Set value is in hexadecimal

HEX-1 Rapid traverse acceleration/deceleration type

0(bit3.2.1.0 = 0000) : Step

U(0163,2,1,0 = 00001): Linear acceleration/deceleration 2(bit3,2,1,0 = 00010): Prim ary delay 8(bit3,2,1,0 = 1000): Exponential acceleration and linear deceleration F(bit3,2,1,0 = 1111): Soft acceleration/deceleration

(Note) R1 > R3 when both R1 and R3 contain 1.

HEX-2 Cutting feed acceleration/deceleration type

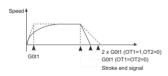

0(bit7,6,5,4 = 0000) : Step 1(bit7,6,5,4 = 0001) : Linear acceleration/deceleration

T(bit7,6,5,4 = 0001): Enhear acceleration/deceleration 2(bit7,6,5,4 = 0010): Prim ary delay 8(bit7,6,5,4 = 1000): Exponential acceleration and linear deceleration F(bit7,6,5,4 = 1111): Soft acceleration/deceleration

HEX-3 Stroke end stop types

0(bit9,8 = 00): Linear deceleration (Decelerates at G0t1)
1(bit9,8 = 01): Linear deceleration (Decelerates at 2×G0t1)

2(bit9,8 = 10): Position loop step stop 3(bit9,8 = 11): Position loop step stop

(Note) OT1(bit8) is valid under the following conditions (valid for dog type zero point return):

- Stop type: Linear deceleration
 - Acceleration/Deceleration mode: Exponential acceleration and Linear deceleration

HEX-4

Not used. Set to "0".

[#2004] G0tL G0 time constant (linear)

Set a linear control time constant for rapid traverse acceleration and deceleration.

The time constant will be enabled when LR (rapid traverse feed with linear acceleration) deceleration) or F (soft acceleration/deceleration) is selected in "#2003 smgst Acceleration and deceleration modes"

---Setting range 1 to 4000 (ms)

Axis Specifications Parameters

[#2005] G0t1 G0 time constant(primary delay) / Second-step time constant for soft acceleration/deceleration

Set a primary-delay time constant for rapid traverse acceleration and deceleration.

The time constant will be enabled when R1 (rapid traverse feed with primary delay) or R3 (exponential acceleration and linear deceleration) is selected in "#2003 smgst Acceleration and deceleration modes".

When the soft acceleration/deceleration is selected, the second-step time constant will be used.

<Rapid traverse feed with primary delay>

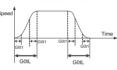

<Rapid traverse feed with exponential acceleration and linear deceleration>

<Soft acceleration/deceleration>

- When "#1219 aux03/bit7" is set to "0"

(Note) The time constant setting for the soft acceleration/deceleration can be changed by the setting of "#1219 aux03/bit7"

---Setting range 1 to 5000 (ms)

[#2006] G0t2

Not used. Set to "0".

[#2007] G1tL G1 time constant (linear)

Set a linear control time constant for cutting acceleration and deceleration. The time constant will be enabled when LC (cutting feed with linear acceleration/ deceleration) or F (soft acceleration/deceleration) is selected in "#2003 smgst Acceleration or deceleration modes".

---Setting range 1 to 4000 (ms)

[#2008] G1t1 G1 time constant (primary delay)/Second-step time constant for soft

Set the primary delay time constant for cutting acceleration and deceleration.

The time constant will be enabled when C1 (cutting feed with the primary delay) or C3 (cutting feed with exponential acceleration and linear deceleration) is selected in "#2003 smast acceleration/deceleration modes".

When the soft acceleration or deceleration is selected, the second-step time constant will be used

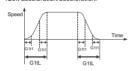

<Cutting feed with primary delay>

Cutting feed with exponential acceleration and linear decelerations

<Soft acceleration/deceleration>

---Setting range-1 to 5000 (ms)

[#2009] G1t2

Not used. Set to "0".

[#2010] fwd_g Feed forward gain

Set a feed forward gain for pre-interpolation acceleration/deceleration.

The larger the set value, the smaller the theoretical control error will be. However, if a machine vibration occurs, set the smaller value.

---Setting range 0 to 200 (%)

【#2011】 G0back G0 backlash

Set up the backlash compensation amount when the direction is reversed with the movement command in rapid traverse feed mode or in manual mode.

---Setting range-

-9999999 to 9999999

【#2012】 G1back G1 backlash

Set up the backlash compensation amount when the direction is reversed with the movement command in cutting mode.

---Setting range

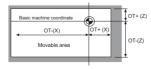

-9999999 to 9999999

【#2013】 OT - Soft limit I -

Set a soft limit area with reference to the zero point of the basic machine coordinate. Set the coordinate in the negative direction for the movable area of stored stroke limit 1. The coordinate in the positive direction is set in "#2014 OT+".

To narrow the available range in actual use, use the parameters "#8204 OT-" and "#8205 OT+

When the same value (other than "0") is set in this parameter and "#2014 OT+", this function will be disabled

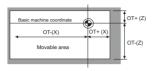

---Setting range -99999.999 to 99999.999 (mm)

[#2014] OT + Soft limit I +

Set a soft limit area with reference to the zero point of the basic machine coordinate. Set the coordinate in the positive direction for the movable area of stored stroke limit 1. The coordinate in the negative direction is set in "#2013 OT-".

To parrow the available range in actual use, use the parameters "#8204 OT-" and "#8205 OT+"

When the same value (other than "0") is set in this parameter and "#2013 OT-", this function will be disabled.

---Setting range

-99999.999 to 99999.999 (mm)

[#2015] t1m1- Negative direction sensor of tool setter or TLM standard length

Set a sensor position in the negative direction when using the tool setter When the TLM is used, set the distance from a tool change point (reference position) to the measurement basic point (surface) in order to measure the tool length.

(Note) In the case of the basic axis and inclined axis of the inclined axis specifications, set the position on the orthogonal coordinate

--Setting range

-99999.999 to 99999.999 (mm)

[#2016] t1m1+ Positive direction sensor of tool setter

Set the sensor position in the positive direction when using the tool setter.

(Note) In the case of the basic axis and inclined axis of the inclined axis specifications, set the position on the orthogonal coordinate.

--Setting range

-99999.999 to 99999.999 (mm)

【#2017】 tap_g Axis servo gain

Set the position loop gain for special operations (synchronized tapping, interpolation with spindle C axis, etc.).

Set the value in 0.25 increments

The standard setting value is "10"

---Setting range-

0.25 to 200.00 (rad/s)

[#2018(PR)] no_srv Operation with no servo control

Select when performing test operation without connecting the drive unit and motor.

0: Normal operation

1: Test operation When "1" is set, the o

is set, the operation will be possible even if drive units and motor are not connected, because the drive system alarm will be ignored

This parameter is used for test operation during start up: Do not use during normal operation. If "1" is set during normal operation, errors will not be detected even if they occur.

[#2019] revnum Return steps

Set the steps required for reference position return for each axis.

0: Not execute reference position return.

1 to max. number of NC axes: Steps required for reference position return

[#2020] o chkp Spindle orientation completion check during second reference position

Set the distance from the second reference position to the position for checking that the spindle orientation has completed during second reference position return. When the set value is "0", the above check will be omitted.

---Setting range

0 to 99999 999 (mm)

[#2021] out_f Maximum speed outside soft limit range

Set the maximum speed outside the soft limit range.

Setting range

0 to 1000000 (mm/min)

[#2022] G30SLX Validate soft limit (automatic and manual)

Select whether to disable a soft limit check during the second to the fourth reference position return in both automatic and manual operation modes. 0: Enable

1: Disable

[#2023] ozfmin Set up ATC speed lower limit

Set the minimum speed outside the soft limit range during the second to the fourth reference position return.

---Setting range

0 to 1000000 (mm/min)

[#2024] synerr Allowable error

Set the maximum synchronization error, allowable at the synchronization error check, for he primary axis

When "0" is set, the error check will not be carried out

---Setting range 0 to 99999.999 (mm)

[#2025] G28rap G28 rapid traverse rate Set a rapid traverse rate for the dog type reference position return command.

This is not used for the distance-coded reference position detection

---Setting range

1 to 1000000 (mm/min)

[#2026] G28crp G28 approach speed

Set the approach speed to the reference position.

(Note) The G28 approach speed unit is (10° /min) only when using the Z-phase type encoder (#1226 aux10/bit3=1) for the spindle/C-axis reference position return type. The same unit is used for both the micrometric and sub-micrometric specifications.

-Setting range

1 to 60000 (mm/min)

[#2027] G28sft Reference position shift distance

Set the distance from the electrical zero-point detection position to the reference position. This is not used for the distance-coded reference position detection.

(Note 1) When "#1240 set12/bit2" is ON, a magnification (C: 10-fold, D: 100-fold and E: 1000-fold) corresponding to the input setting unit ("#1003 iunit") will be applied to the setting value.

(Note 2) The sign of setting value is will be following: the direction of "#2030 dir (-) Reference position direction (-)" is plus, and the opposite direction is minus.

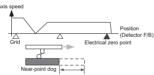

(Note 3) When set value is set to minus, the axis moves to electrical zero-point detection position at first and then moves in opposite direction.

--Setting range

-99.999 to +99.999 (mm)

[#2028] grmask Grip mask amount

Set the distance where the grid point will be ignored when near-point dog OFF signals are close to that grid point during reference position return.

Grid mask setup distance

The grid mask is valid for one grid

This is not used for the distance-coded reference position detection.

---Setting range

0.000 to 99.999 (mm)

[#2029] grspc Grid interval

Grid space (#2029 grspc)

Set the distance between grids.

Normally, the ball screw pitch value (#2218 PIT) or the movement amount per motor rotation is set as the grid space. To make the grid space smaller, set a divisor of the grid space.

<Calculation method for movement amount per motor rotation>

(1) When linear feed mechanism is a ball screw:
The movement amount per motor rotation = the motor side gear ration / the machine

side gear ratio x the ball screw pitch
(2) When linear feed mechanism is a rack and pinion:

The movement amount per motor rotation = the motor side gear ration / the machine side gear ratio x number of pinion gear teeth x the rack pitch (3) For the rotary axis:

The movement angle per motor rotation = the motor side gear ration / the machine side gear ratio x 360

-Setting range

0.000 to 999.999 (mm)

Axis Specifications Parameters

[#2030(PR)] dir (-) Reference position direction (-)

Select which side of the near-point dog the reference position is established.

0: Positive direction

1: Negative direction

Directions in which reference position is established as viewed from the near-point dog

[#2031] noref Axis without reference position

Select whether the reference position is provided for the axis.

Reference position is provided. (Normal controlled axis)
 No reference position is provided.

" is set, reference position return is not required before automatic operation starts.

[#2032] nochk Whether reference position return is completed not checked

Select whether to check the reference position return completion.

Check the reference position return completion

1: Not check the reference position return completion

1" is set, the absolute and incremental commands can be executed even if dog type (or Z phase pulse system) reference position return is not completed.

Note that this setting is available for a rotary axis only.

[#2033] zp_no Z phase pulse system reference position return spindle encoder No.

Set the spindle encoder No. to be used when the reference position return is performed with the Z phase pulse of the spindle encoder.

0: Dog type 1 to 6: Spindle No.

*The setting range differs according to the model.

---Setting range-

0 to 6

[#2034] rfpofs Distance-coded reference position detection offset

Set the offset value from the position for the initial reference position setting to the machine's actual basic point in reference position return in the distance-coded reference position detection

Input the value of the machine value counter that is displayed immediately after the

reference position is established.

When the power is turned ON and this parameter is set to "0", the manual reference

position return is regarded as initial reference position setting.

If this parameter is set to "0", automatic operation won't be available.

---Setting range

-99999.999 to 99999.999 (mm)

[#2035] srchmax Distance-coded reference position detection scan distance

Set the maximum distance for scanning the reference marks when the reference position is

not established in the distance-coded reference position detection.
For the scan distance, set the distance that fully covers the number of reference marks as you wish to detect

(Example) When adding about 10% of additional coverage: Scan distance = Base reference mark interval [mm] * 2 * 1.1

---Setting range

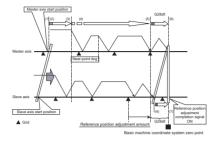

0.000 to 99999.999 (mm)

[#2036] slv_adjust Reference position adjustment value

Set the distance from the first grid point after leaving the near point dog on the secondary axis to the position where the reference position is actually established in dog-type reference position return in synchronous control. (Reference position shift amount is not included.)

The adjustment value will be automatically set in the secondary axis's parameter according to the reference position adjustment complete signal from PLC. Fine adjustment is also available from the parameter screen.

In the distance-coded reference position detection, the reference position adjustment value will be invalid

(Note 1) This parameter is enabled when the synchronization at zero point initialization ("#1493 ref_syn" = "1" of the primary axis) is applied.

(Note 2) This parameter can be set when one of the following settings is applied.

2) This parameter can be set when one of the following set.

- Relative position detection ("#2049 type" = "0")

- Dog-type absolute position detection ("#2049 type" = "3")

- Simple absolute position ("#2049 type" = "9")

(Note 3) Set "0" when using the speed/current command synchronization control.

(Note 4) A setting unit of this parameter is [mm]. It is not influenced by the content of the following parameters setting.
- "#1003 iunit"

- "#1004 ctrl_unit"
- "#1005 plcunit" "#1040 M_inch"
- "#1041 | inch
- "#1240 set12/bit2" (Zero point shift amount magnification)

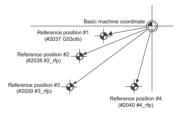

(Note 5) The number of the significant digits after decimal point follows "#1004 ctrl_unit" (Note 6) A change of this parameter requires reference position return. When the automatic operation starts without reference position return, an alarm will occur.

---Setting range

0 to 99999.999999 (mm)

[#2037] G53ofs Reference position #1

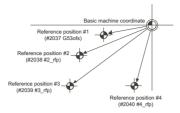

Set the position of the first reference position from the zero point of the basic machine coordinate

---Setting range -99999.999 to 99999.999 (mm)

[#2038] #2_rfp Reference position #2

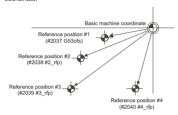

Set the position of the second reference position from the zero point of the basic machine coordinate.

---Setting range -99999.999 to 99999.999 (mm)

[#2039] #3 rfp Reference position #3

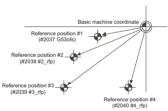

Set the position of the third reference position from the zero point of the basic machine coordinate.

---Setting range -99999.999 to 99999.999 (mm)

[#2040] #4_rfp Reference position #4

Set the position of the fourth reference position from the zero point of the basic machine coordinate.

---Setting range -99999.999 to 99999.999 (mm)

[#2049(PR)] type Absolute position detection method

Select the absolute position zero point alignment method

- 0: Not absolute position detection
- 1: Stopper method (push against mechanical stopper)
- 1. Stopper memod uporst againsts inectantical stopper;
 2. Marked point alignment method (align to alignment point)
 3. Dog-type (align with dog and near point detection switch)
 4. Marked point alignment method II (Align to alignment mark. Grid return won't be performed after marked point alignment)
 9. Simple absolute position (Not absolute position detection, but the position when the power is turned off is registered.)

[#2050] absdir Basic point of Z direction

Select the direction of the grid point immediately before the machine basic position (basic point of detector) in the marked point alignment.

- 0: Positive direction
- 1: Negative direction

[#2051] check Check

Set the tolerable range of travel distance (deviation distance) while the power is turned OFF

If the difference of the positions when the power is turned OFF and when turned ON again is larger than this value, an alarm will be output. Set "0" to omit the check.

---Setting range 0 to 99999.999 (mm)

[#2054] clpush Current limit (%)

Set the current limit value during the stopper operation in the dogless-type absolute position detection

The setting value is the ratio of the current limit value to the rated current value

---Setting range 0 to 100 (%)

[#2055] pushf Push speed

Set the feedrate for the automatic initial setting during stopper method

---Setting range

1 to 999 (mm/min)

【#2056】 aproch Approach

Set the approach distance of the stopper when deciding the absolute position basic point with the stopper method.

After using stopper once, the tool returns with this distance, and then use stopper again,

--Setting range

0 to 999.999 (mm)

[#2057] nrefp Near zero point +

Set the positive direction width where the near reference position signal is output. When set to "0", the width will be equivalent to the grid width setting.

(Note) When "#1240 set12/bit2" is ON, a magnification (C: 10-fold, D: 100-fold, E:1000-fold) corresponding to the input setting increment ("#1003 iunit") will be applied to the setting value.

--Setting range

0 to 999,999 (mm)

(Input setting increment applied)

[#2058] nrefn Near zero point -

Set the negative direction width where the near reference position signal is output.

When set to "0", the width will be equivalent to the grid width setting.

(Note) When "#1240 set12/bit2" is ON, a magnification (C: 10-fold, D: 100-fold, E:1000-fold) corresponding to the input setting increment ("#1003 iunit") will be applied to the setting value.

---Setting range

0 to 999.999 (mm)

(Input setting increment applied)

[#2059] zerbas Select zero point parameter and basic point

Select which is to be the zero point coordinate position during absolute position initial setting

Position where the axis was stopped.
 Grid point just before stopper.

【#2061】 OT 1B- Soft limit IB-

Set the coordinate of the lower limit of the area where the stored stroke limit IB is inhibited.

Set a value from zero point in the basic machine coordinate system.

If the same value (non-zero) with the same sign as that of "#2062 OT_IB+" is set, the stored

stroke limit IB function will be disabled.

---Setting range

-99999.999 to 99999.999 (mm)

【#2062】 OT_1B+ Soft limit IB+

Set the coordinate of the upper limit of the area where the stored stroke limit IB is inhibited. Set a value from zero point in the basic machine coordinate system

---Setting range-

-99999 999 to 99999 999 (mm)

[#2063] OT_1B type Soft limit IB type

Select the type that applies the settings of "#2062 OT_IB+" and "#2061 OT_IB-" in stored

stroke limit I

0: Soft limit IB
1: The settings are invalid
2: Soft limit IC

3: Soft limit is checked for the inclined axis control axis with the program coordinate system.

(Note) This is valid only for inclined axis' base axis and inclined axis.

Axis Specifications Parameters

[#2068] G0fwdg G00 feed forward gain

Set a feed forward gain for G00 pre-interpolation acceleration/deceleration The larger the setting value, the shorter the positioning time during in-position checking If a machine vibration occurs, set the smaller value,

--Setting range 0 to 200 (%)

[#2069] Rcoeff Axis arc radius error correction coefficient

Set the percentage to increase or decrease the arc radius error correction amount for each axis

---Setting range -100.0 to +100.0 (%)

[#2070(PR)] div_RT Rotational axis division count

Set the number of divisions of one turn of the rotary axis under control.

(Example)
When "36" is set, one turn is supposed to be 36.000.

(Note 1) When "0" is set, the normal rotary axis (360.000 degrees for one turn) is assumed.

(Note 2) If this parameter is changed when the absolute position detection specification is used, absolute position data will be lost. Initialization must be performed again.

-Setting range

0 to 999

[#2071] s_axis Inclined axis selection (for L system only)

Select whether the axis is to be under the inclined axis control or to be the base axis corresponding to the inclined axis.

- 0: Not to be under the inclined-axis control
- Inclined axis
- 2: Base axis corresponding to inclined axis

(Note) Each of "1" and "2" values must be set for only one axis. If either value is set for two or more axes, inclined-axis control does not work.

[#2072] rslimt Restart limit

Set the most minus (-) side position where restart search is possible. If the machine is positioned on the more minus (-) side than the set value in T-command restart mode, restart search in type 3 will be disabled.

-Setting range -99999.999 to 99999.999 (mm)

[#2073] zrn_dog Origin dog Random assignment device

Under the standard specifications, the origin dog signal is assigned to a fixed device. Set the input device in this parameter when it is desired to assign the origin dog signal to a position other than the fixed device.

(Note1) This parameter is enabled in the following conditions. NC axis: When "#1226 aux10/bit5" is set to "1". PLC axis: When "#1246 set18/bit7" is set to "1".

(Note 2) When this parameter is valid, do not set the existing device number. If the existing device number is set, an emergency stop will occur. However, no device number check will be performed for an axis to which the "near-point dog ignored" signal is input.

---Setting range-0000 to 02FF (HEX)

[#2074] H/W_OT+ H/W OT+ Random assignment device

Under the standard specifications, the OT (+) signal is assigned to a fixed device. Set the input device in this parameter when it is desired to assign the OT (+) signal to a position ner than the fixed device.

(Note1) This parameter is enabled in the following conditions.

NC axis: When "#1226 aux10/bit5" is set to "1".

NC axis: When "#1226 aux10/bit5" is set to "1".
PLC axis: When "#1246 set18/bit7" is set to "1".

(Note 2) When this parameter is valld, do not set the existing device number. If the existing device number is set, an emergency stop will occur. However, no device number check will be performed for an axis to which the "OT ignored" signal is input.

---Setting range 0000 to 02FF (HEX)

[#2075] H/W_OT- H/W OT- Random assignment device

Under the standard specifications, the OT (-) signal is assigned to a fixed device. Set the input device in this parameter when it is desired to assign the OT (-) signal to a position other than the fixed device.

(Note1) This parameter is enabled in the following conditions. NC axis: When "#1226 aux10/bit5" is set to "1". PLC axis: When "#1246 set18/bit7" is set to "1".

(Note 2) When this parameter is valid, do not set the existing device number. If the existing device number is set, an emergency stop will occur. However, no device number check will be performed for an axis to which the "OT ignored" signal is input.

---Setting range---0000 to 02FF (HEX)

[#2076] index_x Index table indexing axis

Select whether the axis is a normal axis or an index table indexing axis.

0: Normal axis

1. Index table indexing axis

(Note) This parameter is valid only for the NC axis. The parameter is invalid if set for the PLC axis

【#2077】 G0inps G0 in-position width

Set the in-position width for G0.

Between SV024 and this parameter, the parameter with a larger value will be applied When "0" is set, this parameter will be invalid: only SV024 will be available.

---Setting range

0.000 to 99.999 (mm)

【#2078】 G1inps G1 in-position width

Set the in-position width for G1.

Between SV024 and this parameter, the parameter with a larger value will be applied. When "0" is set, this parameter will be invalid: only SV024 will be available.

-Setting range 0.000 to 99.999 (mm)

[#2079(PR)] chcomp Chopping compensation coefficient

Set the coefficient to be applied to the compensation amount for the insufficient amount caused by servo delay during chopping.

Setting range

0 to 10 (standard value: 8)

[#2080] chwid Bottom dead center position width

Set the tolerance between the commanded stroke and actual stroke.

Compensation will be applied during chopping so that the result of [command width - maximum stroke of top or bottom dead point/ 2] will be within this tolerance.

---Setting range-

0 to 10.000 (mm)

[#2081] chclsp Maximum chopping speed

Set the clamp speed in chopping operation

When "0" is set, the clamp speed will be determined by "#2002 clamp".

---Setting range

0 to 60000 (mm/min)

[#2082] a_rstax Restart position return order

Set the No. for each axis in order from the 1st automatically returning axis to the restart position.
When '0' is set, the axis will not return.
Note that when '0' is set for all axes, all of the axes will return simultaneously.

---Setting range---

0 to 8

[#2084] G60_ax Unidirectional positioning operation selection

Select how to operate the unidirectional positioning when the positioning command (G00) is issued

0: Carry out unidirectional positioning according to the command and modal

 Carry out unidirectional positioning regardless of the command and modal.
 "1" for the axis to carry out the unidirectional positioning at every positioning command, regardless of whether the unidirectional positioning command and modal are issued.

<Related parameters>
"#8209 G60 SHIFT" and "#2076 index_x"

[#2087] syncnt Synchronization/super-imposition control setting for each axis

Set the polarity of synchronous axis with respect to basic axis to the bit corresponding to each axis

0: Polarity with respect to basic axis is positive

1: Polarity with respect to basic axis is negative

-Setting range

0 to FF (hexadecimal)

$\hbox{[\#2088]} \quad bsax_sy \quad Reference \ axis \ for \ synchronous \ control$

Set the basic axis for synchronous control with the 2nd axis name (axname2). A numerical character cannot be set as the 1st character.

-Setting range Axis name

[#2089] bsax_pl

Not used. Set to "0"

[#2090] plrapid Rapid traverse rate for super-imposition control

Set the rapid traverse rate for superimposition control. (Equivalent to "#2001 rapid Rapid traverse rate".)

---Setting range

1 to 1000000 (mm/min)

Axis Specifications Parameters

[#2091] plclamp Cutting feed clamp speed for super-imposition control

Set the cutting feed clamp speed for superimposition control. (Equivalent to "#2002 clamp Cutting feed clamp speed".)

---Setting range

1 to 1000000 (mm/min)

[#2092] pIG0tL G0 time constant for superimposition control (linear)

Set the G0 time constant (linear) for superimposition control.

(Equivalent to "#2004 G0tL G0 time constant (linear)".)

---Setting range-1 to 4000 (ms)

[#2093] pIG0t1 G0 time constant for superimposition control (primary delay)

Set the G0 time constant (primary delay) for superimposition control.

(Equivalent to "#2005 G0t1 G0 time constant (primary delay".)

---Setting range 1 to 5000 (ms)

[#2094] pIG1tL G1 time constant for superimposition control (linear)

Set the G1 time constant (linear) for superimposition control. (Equivalent to "#2007 G1tL G1 time constant (linear)".)

---Setting range-

1 to 4000 (ms)

[#2095] pIG1t1 G1 time constant for superimposition control (primary delay)

Set the G1 time constant (primary delay) for superimposition control.

(Equivalent to "#2008 G1t1 G1 time constant (primary delay)".)

---Setting range

1 to 5000 (ms)

[#2096] crncsp Minimum corner deceleration speed

Set the minimum clamp speed for corner deceleration in the high-accuracy control mode. Normally set "0".

(Note) This parameter is invalid during SSS control.

---Setting range

0 to 1000000 (mm/min)

[#2097] tlml2- Sub side tool setter - direction sensor

Set the sensor position (on sub side) in the (-) direction when using the tool setter on the sub spindle side

(Note) In the case of the basic axis and inclined axis of the inclined axis specifications, set the position on the orthogonal coordinate

---Setting range

-99999.999 to 99999.999 (mm)

[#2098] tlml2+ Sub side tool setter + direction sensor

Set the sensor position (on sub side) in (+) direction when using the tool setter on the sub spindle side

(Note) In the case of the basic axis and inclined axis of the inclined axis specifications, set the position on the orthogonal coordinate.

-Setting range

-99999.999 to 99999.999 (mm)

[#2102] skip_tL Skip time constant linear

Set a linear control time constant for variable speed skip acceleration and deceleration, or for an occasion where a skip command issues acceleration/deceleration time constant enabled (R1)

The time constant will be enabled when LC (cutting feed with linear acceleration and deceleration) or "F" (soft acceleration/deceleration) is selected in "#2003 smgst Acceleration and deceleration modes".

When set to "0", the time constant set by "#2008 G1t1" is used.

---Setting range-

0 to 4000 (ms)

[#2103] skip_t1 Skip time constant primary delay / Second-step time constant for soft acceleration/deceleration

Set a primary-delay time constant for variable speed skip acceleration and deceleration, or for an occasion where a skip command issues acceleration/deceleration time constant

enabled (R1).

The time constant will be enabled when C1 (cutting feed with primary delay) or C3 (exponential acceleration and linear deceleration) is selected in "#2003 smgst Acceleration and deceleration modes". When the soft acceleration/deceleration is selected, the secondstep time constant will be used.

When set to "0", the time constant set by "#2008 G1t1" is used.

---Setting range

0 to 5000 (ms)

Axis Specifications Parameters

[#2106] Index unit Indexing unit

Set the indexing unit to which the rotary axis can be positioned.

Setting range

0 to 360 (°)

[#2109] Rapid (H-precision) Rapid traverse rate for high-accuracy control mode

Set the rapid traverse rate for each axis in the high-accuracy control mode. "#2001 rapid will be used when "0" is set.

--Setting range

0 to 1000000 (mm/min)

[#2110] Clamp (H-precision) Cutting feed clamp speed for high-accuracy control mode

Set the cutting feed maximum speed for each axis in the high-accuracy control mode. "#2002 clamp" will be used when "0" is set.

---Setting range-

0 to 1000000 (mm/min)

[#2111] Blf valid Quadrant protrusion compensation valid

Set whether to enable the quadrant protrusion compensation

0: Disable

O. Disduite
1: Enable
1: Enable
If either of "#2112 Bif motor inertia", "#2115 Bif motor stl trq" or "#2113 Bif visc friction" is set
to "0", quadrant protrusion compensation will not work even if this parameter is set to "1".

【#2112】 Blf motor inertia Motor inertia

Set the motor inertia for quadrant protrusion compensation.

Refer to the servo manual and input the value appropriate for the motor.

--Setting range

1 to 32000 (10-6kgm2)

[#2113] Blf visc friction Viscous friction

Set the viscous friction for quadrant protrusion compensation

After setting the other parameters to the appropriate values, monitor the machine end and

gradually adjust the value.

If this parameter setting is small, a recess will form on the inner side of the circle, and if large, a protrusion will form on the outer side of the circle. When the value is appropriate, a

spike-shaped quadrant protrusion will form based on normal step-shaped backlash.

---Setting range-

1 to 32767 (1/16 Nm/(rad/s))

[#2114] Blf fwdg Compensation FF gain

Set the feed forward gain for quadrant protrusion compensation.

After setting the other parameters to the appropriate values, monitor the machine end and gradually adjust the value.

this parameter setting is small, a large quadrant protrusion will form, and if large, a recess will form on the inner side of the circle.

---Setting range-

0 to 1000 (%)

[#2115] Bif motor sti trq Motor stall torque

Set the motor rated current for quadrant protrusion compensation

Refer to the servo manual and input the value appropriate for the motor.

---Setting range---

1 to 16000 (1/256 Nm)

[#2118(PR)] SscDrSel Speed monitor Door selection

Select which door group of the speed monitoring the spindle belongs to.

0000: Door 1 group. 0001: Door 1 group. 0002: Door 2 group.

0003: Door 1 and 2 group.

The speed monitoring will not be executed when "#2313 SV113 SSF8/BitF" is OFF regardless of this parameter.

The selected door group must be set when setting the synchronous control.

The spindle/C axis control enables the door selection in "#3071 SscDrSelSp" for the

corresponding spindle.

[#2121] vbacklash valid Variable backlash valid/continuous or Variable backlash II valid

Select whether the variable backlash is to be disabled/enabled/continuous, or variable backlash II enabled.

0: Disable 1: Enable

Continuous
 Enable variable backlash II
 "#2011 G0back" and "#2012 G1back" will not work unless "0: Disable" is selected.)

[#2122] G0vback+ Variable G0 backlash +

Set the compensation amount for the range of each position during rapid traverse.

(+: B1, =: B2, -: B3 on the compensation amount table)

---Setting range

-9999999 to 99999999 (Interpolation unit)

Axis Specifications Parameters

[#2123] G0vback= Variable G0 backlash =

Set the compensation amount for the range of each position during rapid traverse.

(+: B1, =: B2, -: B3 on the compensation amount table)

---Setting range

-99999999 to 99999999 (Interpolation unit)

[#2124] G0vback- Variable G0 backlash -

Set the compensation amount for the range of each position during rapid traverse.

(+: B1. =: B2. -: B3 on the compensation amount table)

---Setting range

-99999999 to 99999999 (Interpolation unit)

【#2125】 G1vback+ Variable G1 backlash +

Set the compensation amount for the range of each position during cutting feed.

(+: A1, =: A2, -: A3 on the compensation amount table)

---Setting range

-99999999 to 99999999(Interpolation unit)

[#2126] G1vback= Variable G1 backlash =

Set the compensation amount for the range of each position during cutting feed.

(+: A1, =: A2, -: A3 on the compensation amount table)

---Setting range-

-99999999 to 99999999 (Interpolation unit)

[#2127] G1vback- Variable G1 backlash -

Set the compensation amount for the range of each position during cutting feed.

(+: A1, =: A2, -: A3 on the compensation amount table)

---Setting range

-99999999 to 99999999 (Internolation unit)

[#2128] G1vback feed1 G1 variable backlash compensation amount changeover speed 1

Set the speed range during cutting feed.

Set the speech raining using state low speed, and the speed exceeding 2 is the high speed.) (The speed less than 1 is the low speed, and the speed exceeding 2 is the high speed.) Note that the speech grange is identified in the order of low, high and medium speed. Consider whether the set value should be larger or smaller than other values.

-Setting range

0 to 480000 (mm/min)

[#2129] G1vback feed2 G1 variable backlash compensation amount changeover speed 2

Set the range of the speed during cutting feed.

(The speed less than 1 is the low speed, and the speed exceeding 2 is the high speed.) Note that the speed range is identified in the order of low, high and medium speed

Consider whether the set value should be larger or smaller than other values.

---Setting range

0 to 480000 (mm/min)

[#2130] G1vback dist1 G1 variable backlash compensation amount changeover distance 1

Set the range of the distance during cutting feed.

(The distance less than 1 is the small distance, and the distance exceeding 2 is the large distance.)

Note that the distance range is identified in the order of small, large and medium. Consider

whether the set value should be larger or smaller than other values.

---Setting range

0 to 999999.999999 (mm)

[#2131] G1vback dist2 G1 variable backlash compensation amount changeover distance 2

Set the range of the distance during cutting feed.

(The distance less than 1 is the small distance, and the distance exceeding 2 is the large distance.)

Note that the distance range is identified in the order of small, large and medium. Consider whether the set value should be larger or smaller than other values.

---Setting range

0 to 999999.999999 (mm)

[#2132] vback pos1 Variable backlash compensation amount changeover end point

Set the range of the center of the end point position.

(The range less than position 1 is the - range, and the range exceeding position 2 is the + range.)

The end point position range is determined in the order of -, + , and center. Consider

whether the set value should be larger or smaller than other values

(Note 1) If continuous variable backlash is set with "#2121 vbacklash valid", position 1 will be set as the position - point and position 2 will be set as the position + point.

(Note 2) When the size relation of the compensation amount changeover speed and distance 1 and 2 is not appropriate while the variable backlash compensation is valid, the followings will be applied: If the backlash speed and distance are smaller than the compensation amount changeover speed and distance 1, both the speed and distance will be small; if larger than the compensation amount changeover speed and distance 2, both the speed and distance will be large.

Setting range

-999999.999999 to 999999.999999 (mm)

Axis Specifications Parameters

[#2133] vback pos2 Variable backlash compensation amount changeover end point

Set the range of the center of the end point position.

(The range less than position 1 is the range, and the range exceeding position 2 is the + range.)

The end point position range is determined in the order of -, +, and center. Consider whether the set value should be larger or smaller than other values.

(Note 1) If continuous variable backlash is set with "#2121 vbacklash valid", position 1 will be set as the position - point and position 2 will be set as the position + point.

(Note 2) When the size relation of the compensation amount changeover speed and distance 1 and 2 is not appropriate while the variable backlash compensation is valid, the followings will be applied: If the backlash speed and distance are smaller than the compensation amount changeover speed and distance 1, both the speed and distance will be small; if larger than the compensation amount changeover speed and distance 2, both the speed and distance will be large.

---Setting range

-999999.999999 to 999999.999999 (mm)

[#2134] vback arc K Variable backlash arc compensation coefficient

Set the arc compensation coefficient.

-Setting range-0 to 300 (%)

[#2135] vback feed refpt Variable backlash reference position selection (speed)

Select the speed range to be used as the reference position

- 0: Low speed 1: Medium speed
- 2: High speed

[#2136] vback pos refpt Variable backlash reference position selection (end point position)

Select the end point range to be used as the reference position.

- 0: Position + range
- 1: Position center range
- 2: Position range

[#2137] vback dir refpt Variable backlash reference position selection (entry direction)

Select the entry direction to be used as the reference position

- 0: Entry direction +
- 1: Entry direction -

[#2138] vback pos center Continuous variable backlash position center point

Set the position center point. (This is used only when continuous variable backlash is set with "#2121 vbacklash valid".) Set a value between "#2132 vback pos1" and "#2133 vbackpos2" for the position center point.

(Note) When the size relation of the compensation amount changeover speed and distance 1 and 2 is not appropriate while the variable backlash compensation is valid, the followings will be applied:

If the backlash speed and distance are smaller than the compensation amount changeover speed and distance 1, both the speed and distance will be small; if larger than the compensation amount changeover speed and distance 2, both the speed and distance will be large

---Setting range-

-999999,999999 to 999999,999999 (mm)

[#2139] omrff_off OMR-FF invalid

Select whether to enable or temporarily disable the OMR-FF control when OMR-FF is valid.

0: Enable

1: Temporarily disable

When "1" is selected while OMR-FF is valid, OMR-FF can be temporarily disabled and conventional feed forward control can be applied instead.

[#2140(PR)] Ssc Svof Filter Speed monitor Error detection time during servo OFF

Set the error detection time of command speed monitoring and feedback speed monitoring during servo OFF.

An alarm will occur if the time, for which the speed has been exceeding the safe speed or safe rotation speed, exceeds the error detection time set in this parameter. If "0" is set, it will be handled as 200 (ms).

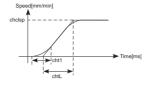

---Setting range

0 to 9999 (ms)

[#2141] chtL Chopping first-step time constant for soft acceleration and deceleration

Set the first-step time constant for the chopping axis when soft acceleration/deceleration is applied

Note that, however, there may be cases where actual time constant is shorter than the set time constant, because the time constant is automatically calculated according to the feedrate so that the acceleration rate during acceleration/deceleration (clamp speed/ chopping time constant) will be constant. When "0" is set, "#2007 G1tL" will be valid.

---Setting range 0 to 4000 (ms)

[#2142] cht1 Chopping second-step time constant for soft acceleration and deceleration

Set the second-step time constant for the chopping axis when soft acceleration/deceleration

Note that, however, there may be cases where actual time constant is shorter than the set time constant, because the time constant is automatically calculated so that the ratio between first-step and second-step time constant will be constant.

When "0" is set. "#2008 G1t1" will be valid

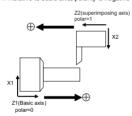

---Setting range 0 to 4000 (ms)

[#2143] polar Control axis relative polarity

Set "0" for the basic axis, and set the polarity of the superimposing axis relative to the basic avis

0: Relative to basic axis, polarity is positive

1: Relative to basic axis, polarity is negative

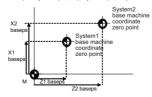

[#2144] baseps Base machine coordinate zero point relative distance

Set each axis's position of the base machine coordinate zero point when an arbitrary point M on the machine is regarded as a base point.

Unify the directions of all part systems' machine zero point positions with the direction of the machine coordinate system of the 1st part system.

If the 1st part system doesn't have a parallel axis, determine the direction arbitrarily.

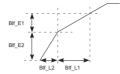

Example: System1(X1, Z1), System2(X2, Z2)

---Setting range -99999.999 to 99999.999 (mm)

[#2146] Blf_L1 Reference distance for position-dependent increasing-type backlash compensation 1

Set the distance for specifying the compensation change rate in position-dependent increasing-type backlash compensation.

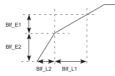

When "#2146 Blf_E1" is set to "0", the position-dependent increasing-type backlash compensation function will be disabled.

--Setting range--

0.000 to 99999.999 (mm)

[#2147] Blf_L2 Reference distance for position-dependent increasing-type backlash compensation 2

Set the distance for specifying the compensation change rate in position-dependent increasing type backlash compensation.

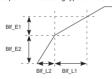

When "#2146 Blf_E1" is set to "0", the position-dependent increasing-type backlash compensation function will be disabled.

---Setting range---

0 000 to 99999 999 (mm)

[#2148] Blf_E1 Reference amount of position-dependent increasing-type backlash compensation 1

Set the compensation amount for specifying the compensation change rate in position-dependent increasing-type backlash compensation.

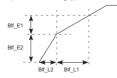

When "#2146 Blf_E1" is set to "0", the position-dependent increasing-type backlash compensation function will be disabled.

---Setting range--

0 to 9999999 (Machine error compensation unit)

[#2149] BIf_E2 Reference amount of position-dependent increasing-type backlash compensation 2

Set the compensation amount for specifying the compensation change rate in position-dependent increasing-type backlash compensation.

When "#2146 Blf_E1" is set to "0", the position-dependent increasing-type backlash compensation function will be disabled.

---Setting range--

0 to 9999999 (Machine error compensation unit)

[#2150] Rot_len Farthest distance from rotary axis center

Set the farthest distance of the rotating part from the rotation center for executing the 3D achine interference check

When "0" is set, this distance will conform to the rotary axis' specification speed.

---Setting range

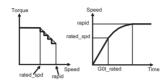

0.000 to 99999.999(mm)

[#2151] rated_spd Rated speed

Set the maximum speed which can be driven with the motor's maximum torque.

(Note 1) This parameter's setting value must be smaller than "#2001 rapid Rapid traverse" If bigger, constant inclination acceleration/deceleration will be applied.

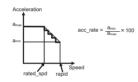

(Note 2) If rapid traverse constant inclination multi-step acceleration/deceleration is valid, and also if this parameter is set to "0", constant inclination acceleration/deceleration will be applied.

---Setting range 0 to 1000000(mm/min)

[#2152] acc_rate Acceleration rate in proportion to the maximum acceleration rate

Set the rate in proportion to the maximum acceleration rate in rapid traverse (Note) If this parameter is set to "0" or "100", constant inclination acceleration/deceleration will be applied

---Setting range 0 to 100(%)

[#2153] G0t_rated G0 time constant up to rated speed (multi-step acceleration/

Set the acceleration rate up to the rated speed of rapid traverse constant inclination multistep acceleration/deceleration.

(Note) If this parameter is set to "0", constant inclination acceleration/deceleration will be applied

---Setting range 0 to 4000(ms)

(G0t_rapid) G0 time constant up to rapid traverse speed (multi-step acc./dec.)

Set the acceleration time until the rapid traverse speed of rapid traverse constant inclination multi-step acceleration/deceleration is applied.

(Note) Set the acceleration time when a pertinent axis is operated independently.

[#2155] hob_fwd_g Feed forward gain for hobbing machining

Set the feed forward gain when controlling as workpiece axis of tool spindle synchronization II (hobbing).

---Setting range 0 to 200 (%)

[#2169] Man meas rtrn dir Return direction in manual measuren

Select the direction of return operation in manual measurement.

- 0: Opposite to the contact direction
- Fixed to the + direction
 Fixed to the direction

[#2170] Lmc1QR Lost motion compensation gain 1 for high-speed retract

Set the lost motion compensation gain in drilling cycle at high-speed retract (CW: - to + direction, CCW: + to - direction).

Set "-1" when drilling cycle at high-speed retract is not performed.

When set to 0, the performance will follow the setting of "#2171 Lmc2QR (Lost motion compensation gain 2 for high-speed retract)".

- --Setting range
 - -1, 0 to 200(%)

Axis Specifications Parameters

[#2171] Lmc2QR Lost motion compensation gain 2 for high-speed retract

Set the lost motion compensation gain in drilling cycle at high-speed retract (CW: - to +

direction, CCW+ to - direction).

Set '-1' when drilling cycle at high-speed retract is not performed.

Set '-1' when drilling cycle at high-speed retract is not performed.

When set to '0', the performance will follow the setting of '#2170 Lmc1QR (Lost motion compensation gain 1 for high-speed retract)".

---Setting range

-1, 0 to 200(%)

[#2172] LmcdQR Lost motion compensation timing for high-speed retract

Set the timing of the lost motion compensation in drilling cycle at high-speed retract. When set to "0", the performance will follow the setting of "#2239 SV039 LMCD (Lost motion compensation timing)".

---Setting range

0 to 2000 (ms)

[#2173] LmckQR Lost motion compensation 3 spring constant for high-speed retract

Set the machine system's spring constant when using lost motion compensation type 3 in drilling cycle with high-speed retract

When set to "0", the performance will follow the setting of "#2285 SV085 LMCk (Lost motion compensation 3 spring constant)"

---Setting range

0 to 32767(0.01%/ // m)

[#2174] LmccQR Lost motion compensation 3 viscous coefficient for high-speed retract

Set the machine system's viscous coefficient when using lost motion compensation type 3 in drilling cycle at high-speed retract.

When set to "0" , the performance will follow the setting of "#2286 SV086 LMCc (Lost motion compensation 3 viscous coefficient)"

---Setting range-0 to 32767(0.01%/ μ m)

[#2175] Special Ax Radius Special diametral axis radius

Set the radius of the special diametral axis.

-Setting range

0 to 99999.999 (mm)

[#2176] Special Ax Clamp Special diametral axis clamp speed

Set a clamp speed for the special diametral axis control.

---Setting range-

0 to 1000000 (°/min)

(Note)For "#2001 rapid" and "#2002 clamp", set speeds on a machining line.
When the value in "#2176 Special Ax Clamp" is smaller than that in "#2001 rapid", "Special Ax Clamp" value will be applied to the clamp speed.

[#2177] ManualFeedBtL Time constant for manual feed rate B

Set the acceleration/deceleration time constant for manual feed rate B.

(Note)When set to "0", this parameter will not be used: conventional acceleration/deceleration will be performed.

-Setting range

0 to 40000 (ms)

[#2180(PR)] S_DIN Speed observation input door No.

Set the door signal input in the drive unit

Use this parameter only when the axis with a door signal belongs to several door groups. The correspondence between the door signals and bits are as follows

bit0 : Door1 signal bit1 : Door2 signal

If the axis does not receive any door signal, set to "0" An error (Y20 0027) will occur in the following cases.

- Several bits are enabled.

- Any bit other than those set in "#2118 S_DSI" is enabled.

---Setting range

0000 to 0002 (HEX)

[#2561] VBL2 VG1 Variable backlash comp II Changeover speed 1

Set the changeover speed at speed normalization

Set a value smaller than that in "#2562 VBL2 VG0".

Normally, the "#2561 VBL2 VG1" value corresponds to the cutting feedrate, the "#2562

VBL2 VG0" value to the rapid traverse rate.

--Setting range 1 to 1000000 (mm/min)

[#2562] VBL2 VG0 Variable backlash comp II Changeover speed 2

Set the changeover speed at speed normalization.
Set a value greater than that in "#2561 VBL2 VG1".
Normally, the "#2561 VBL2 VG1" value corresponds to the cutting feedrate, the "#2562 VBL2 VG0" value to the rapid traverse rate.

---Setting range

1 to 1000000 (mm/min)

Axis Specifications Parameters

[#2563] VBL2 P1 Variable backlash comp II Stroke position 1

Set the most plus (+) side stroke position among the three.

Set the parameters VBL2 P1 to P3 to be "VBL2 P1 > VBL2 P2 > VBL2 P3".

Normally, divide the axis's stroke by four, and set a dividing position (except for the both ends) to be a stroke position.

---Setting range---

-99999.999 to 99999.999 (mm)

[#2564] VBL2 P2 Variable backlash comp II Stroke position 2

Set the middle stroke position among the three. Set the parameters VBL2 P1 to P3 to be "VBL2 P1 > VBL2 P2 > VBL2 P3"

Normally, divide the axis's stroke by four, and set a dividing position (except for the both

ends) to be a stroke position.

---Setting range---99999.999 to 99999.999 (mm)

[#2565] VBL2 P3 Variable backlash comp II Stroke position 3

Set the most minus (-) side stroke position among the three. Set the parameters VBL2 P1 to P3 to be "VBL2 P1 > VBL2 P2 > VBL2 P3". Normally, divide the axis's stroke by four, and set a dividing position (except for the both ends) to be a stroke position.

---Setting range----99999.999 to 99999.999 (mm)

[#2566] VBL2 BL11 Variable backlash comp II Comp data at changeover spd 1 and stroke

Set the compensation data (backlash amount) at changeover speed 1 and stroke position 1. Calculate the current compensation data according to the current speed and position.

---Setting range---

-99999999 to 99999999 (Machine error compensation unit)

[#2567] VBL2 BL12 Variable backlash comp II Comp data at changeover spd 1 and stroke pos 2

Set the compensation data (backlash amount) at changeover speed 1 and stroke position 2. Calculate the current compensation data according to the current speed and position.

--Setting range---

-99999999 to 99999999 (Machine error compensation unit)

[#2568] VBL2 BL13 Variable backlash comp II Comp data at changeover spd 1 and stroke pos 3

Set the compensation data (backlash amount) at changeover speed 1 and stroke position 3. Calculate the current compensation data according to the current speed and position.

---Setting range--

-99999999 to 99999999 (Machine error compensation unit)

[#2569] VBL2 BL01 Variable backlash comp II Comp data at changeover spd 2 and stroke pos 1

Set the compensation data (backlash amount) at changeover speed 2 and stroke position 1. Calculate the current compensation data according to the current speed and position.

---Setting range---

-99999999 to 99999999 (Machine error compensation unit)

[#2570] VBL2 BL02 Variable backlash comp II Comp data at changeover spd 2 and stroke pos 2

Set the compensation data (backlash amount) at changeover speed 2 and stroke position 2. Calculate the current compensation data according to the current speed and position.

--Setting range--

-99999999 to 99999999 (Machine error compensation unit)

[#2571] VBL2 BL03 Variable backlash comp II Comp data at changeover spd 2 and stroke pos 3

Set the compensation data (backlash amount) at changeover speed 2 and stroke position 3. Calculate the current compensation data according to the current speed and position.

---Setting range---

-99999999 to 99999999 (Machine error compensation unit)

[#2572] VBL2 FloatTC Variable backlash comp II Time constant in calculating float amt

Set the time constant in calculating the float amount. Set a value greater than the calculation cycle.

---Setting range--

0 to 10000 (ms)

Axis Specifications Parameters

[#2573] VBL2 LMMul Variable backlash comp II Multiplier in calculating lost motion amt

Set the multiplier in calculating the lost motion compensation amount, before multiplied by 10-3. When "1000" is set, the multiplier is "1".

---Setting range--0 to 1000

[#2574] VBL2 VBound Variable backlash comp II Speed boundary value

Set the speed boundary value in calculating the lost motion compensation amount.

---Setting range---1 to 1000000 (mm/min)

[#2575] VBL2 CompMag Variable backlash comp II Compensation magnification

Set the compensation magnification in calculating the lost motion compensation amount. When "0" is set, the magnification is 100%.

---Setting range---0 to 300 (%)

[#2576] VBL2 CompMul Variable backlash comp II Multiplier in calculating compensation amount

Set the multiplier in applying the lost motion compensation magnification, before multiplied by 10-3. When "1000" is set, the multiplier is "1".

---Setting range---

[#2577] VBL2 BLE Variable backlash comp II Gradually increase amount

Set the value to subtract from the lost motion compensation amount at reversing the axis travel direction.

---Setting range---99999999 to 99999999 (Machine error compensation unit)

[#2578] VBL2 BLL Variable backlash comp II Gradually increase travel distance

Set the travel distance to return to the lost motion compensation amount from the reverse point of the axis travel direction.

---Setting range---0 to 99999.999 (mm)

The parameters with "(PR)" requires the CNC to be turned OFF after the settings. Turn the power OFF and ON to enable the parameter settings.

[#2201(PR)] SV001 PC1 Motor side gear ratio

Set the gear ratio in the motor side when there is the gear between the servomotor's shaft and machine (ball screw, etc.).

For the rotary axis, set the total deceleration (acceleration) ratio

Even if the gear ratio is within the setting range, the electronic gears may overflow and an initial parameter error (servo alarm 37) may occur.

For linear servo system Set to "1". ---Setting range 1 to 32767

[#2202(PR)] SV002 PC2 Machine side gear ratio

Set the gear ratio in the machine side when there is the gear between the servomotor's

shaft and machine (ball screw, etc.).
For the rotary axis, set the total deceleration (acceleration) ratio.

Even if the gear ratio is within the setting range, the electronic gears may overflow and an initial parameter error (servo alarm 37) may occur.

For linear servo system Set to "1". ---Setting range 1 to 32767

[#2203] SV003 PGN1 Position loop gain 1

Set the position loop gain. The standard setting is "33".

The higher the setting value is, the more accurately the command can be followed, and the shorter the settling time in positioning gets, however, note that a bigger shock will be applied to the machine during acceleration/deceleration

When using the SHG control, also set SV004 (PGN2) and SV057 (SHGC).

---Setting range 1 to 200 (rad/s)

[#2204] SV004 PGN2 Position loop gain 2

When performing the SHG control, set the value of "SV003 x 8/3" to "SV004". When not using the SHG control, set to "0"

Related parameters: SV003, SV057 ---Setting range-0 to 999 (rad/s)

[#2205] SV005 VGN1 Speed loop gain 1

Set the speed loop gain

The higher the setting value is, the more accurate the control will be, however, vibration

tends to occur

If vibration occurs, adjust by lowering by 20 to 30%.
The value should be determined to the 70 to 80% of the value at which the vibration stops.

The value differs depending on servo motors.

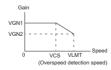

Aim at the standard value determined by the servo motor type and load inertia ratio to adjust.

---Setting range 1 to 30000

[#2206] SV006 VGN2 Speed loop gain 2

Set the speed loop gain at the motor limitation speed VLMT (maximum rotation speed x 1.15) with "VCS(SV029: Speed at the change of speed loop gain)". Use this to suppress noise at high speed rotation during rapid traverse, etc. Then, the speed loop gain decreases at faster speed than the setting value of VCS.

When not using, set to "0"

---Setting range -1000 to 30000

[#2207] SV007 VIL Speed loop delay compensation

Set this when the limit cycle occurs in the full-closed loop, or overshooting occurs in

Set this writer are minim open sets. The positioning.

The speed loop delay compensation method can be selected with SV027/bit1,0.

Normally, use "Changeover type 2". Changeover type 2 controls the occurrence of overshooting by lowering the speed loop lead compensation after the position droop gets 0.

When setting this parameter, make sure to set the torque offset (SV032).

-Setting range 0 to 32767

[#2208] SV008 VIA Speed loop lead compensation

Set the gain of the speed loop integral control

Standard setting: 1364 Standard setting in the SHG control: 1900

Statutous seturing in the Smo Common. 1900. Adjust the value by increasing/decreasing this by about 100 at a time. Raise this value to improve contour tracking accuracy in high-speed cutting. Lower this value when the position droop does not stabilize (when the vibration of 10 to

20Hz occurs).

---Setting range 1 to 9999

[#2209] SV009 IQA Current loop q axis lead compensation

Set the fixed value of each motor.

Set the standard value for each motor described in the standard parameter list.

---Setting range 1 to 20480

[#2210] SV010 IDA Current loop d axis lead compensation

Set the fixed value of each motor.

Set the standard value for each motor described in the standard parameter list.

---Setting range 1 to 20480

[#2211] SV011 IQG Current loop q axis gain

Set the fixed value of each motor.

Set the standard value for each motor described in the standard parameter list.

---Setting range 1 to 8192

[#2212] SV012 IDG Current loop d axis gain

Set the fixed value of each motor.

Set the standard value for each motor described in the standard parameter list.

---Setting range 1 to 8192

[#2213] SV013 ILMT Current limit val

Set the current (torque) limit value in a normal operation.

This is a limit value in forward run and reverse run (for linear motors:forward and reverse direction)

When the standard setting value is "800", the maximum torque is determined by the specification of the motor.

Set this parameter as a proportion (%) to the stall current.

---Setting range-

0 - 999 (Stall current %)

[#2214] SV014 ILMTsp Current limit value in special control

Set the current (torque) limit value in a special operation (absolute position initial setting, stopper control and etc.).

This is a limit value in forward and reverse directions.

Set to "800" when not using.

Set this parameter as a proportion (%) to the stall current.

-Setting range-

0 - 999 (Stall current %)
However, when SV084/bitB=1, the setting range is from 0 to 32767 (Stall current

0.01%)

[#2215] SV015 FFC Acceleration rate feed forward gain

When a relative error in synchronous control is too large, set this parameter to the axis that is delaying

The standard setting is "0". The standard setting in the SHG control is "100".

To adjust a relative error in acceleration/deceleration, increase the value by 50 - 100 at a

---Setting range

0 to 999 (%)

II Parameters Servo Parameters

[#2216] SV016 LMC1 Lost motion compensation 1

Set this parameter when the protrusion (that occurs due to the non-sensitive band by friction, torsion, backlash, etc.) at quadrant change is too large. This sets the compen torque at quadrant change (when an axis feed direction is reversed) by the proportion (%) to the stall torque. Whether to enable the lost motion compensation and the method can be set with other parameters

Type 2: When SV027 (SSF1)/bit9, 8 (lmc) = 10 (Compatible with obsolete type)
Set the type 2 method compensation torque. The standard setting is double the friction

torque.

Related parameters: SV027/bit9,8, SV033/bitF, SV039, SV040, SV041, SV082/bit2, SV113/bit7

Type 3: When SV082(SSF5)/bit1= 1

Set the compensation torque equivalent of dynamic friction amount of the type 3 method compensation amount. The standard setting is double the dynamic friction torque. Related parameters: SV041, SV082/bit2.1, SV085, SV086, SV113/bit7

To vary compensation amount according to the direction.

When SV041 (LMC2) is "0", compensate with the value of SV016 (LMC1) in both +/directions

If you wish to change the compensation amount depending on the command direction, set this and SV041 (LMC2).

(SV016: + direction, SV041: - direction. However, the directions may be opposite

depending on other settings.)

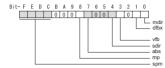

When "-1" is set, the compensation will not be performed in the direction of the command. ---Setting range

-1 to 200 (Stall current %)

Note that when SV082/bit2 is "1", the setting range is between -1 and 20000 (Stall current 0.01%)

[#2217(PR)] SV017 SPEC1 Servo specification 1

Select the servo specifications A function is allocated to each bit. Set this in hexadecimal format

bit F-C : spm Motor series selection

- 0: 200V HF, HP motor 1 1: 200V HF, HP motor 2 (Standard) 2: 400V HF-H, HP-H motor 1 3: 400V HF-H, HP-H motor 2 (Standard)
- 6: 200V LM-F linear motor
- 7: 200V LM-F linear motor 8: 400V LM-F linear motor
- 9: 400V direct-drive motor

bit B:

Not used. Set to "0".

bit A: drvup Combined drive unit:

- For MDS-DM Series
 - 0: Normal setting (Combined drive unit: normal)
- 1: Combined drive unit: one upgrade

MDS-DM-SPV2/SPV3 ------ HF54, HF104, HF223, HF302

bit 9:

Not used. Set to "0".

bit 8 : mp MPI scale pole number setting

0: 360 poles 1: 720 poles

bit 7: abs Position control

These parameters are set automatically by the NC system.

0: Incremental 1: Absolute position control

bit 6-5:

Not used. Set to "0".

bit 4 : sdir Sub side detector feedback

Set the machine side detector's installation polarity.

0: Forward polarity 1: Reverse polarity

bit 3: vfb Speed feedback filter

0: Stop 1: Start (2250Hz) bit 2 : seqh Ready on sequence

0: Normal 1: High-speed

bit 1 : dfbx Dual feedback control

Control the position FB signal in full closed control by the combination of a motor side detector and machine side detector.

0: Stop 1: Start

Related parameters: SV051, SV052

bit 0 : mdir Machine side detector feedback (for Linear/direct-drive motor)

Set the detector installation polarity in the linear servo and direct-drive motor control. 0: Forward polarity 1: Reverse polarity

[#2218(PR)] SV018 PIT Ball screw pitch/Magnetic pole pitch

For servo motor:

Set the ball screw pitch. For the rotary axis, set to "360".

For direct-drive motor Set to "360".

- For linear motor

Set the ball screw pitch. (For LM-F series, set to "48")

---Setting range---

For general motor: 1 to 32767 (mm/rev)
- For linear motor 1 to 32767 (mm)

[#2219(PR)] SV019 RNG1 Sub side detector resolution

For semi-closed loop control

Set the same value as SV020

For full-closed loop control

Set the number of pulses per ball screw pitch.

For direct-drive motor

Set the same value as SV020.

For 1000 pulse unit resolution detector, set the number of pulses in SV019 in increments of

In this case, make sure to set "0" to SV117.

In this case, make Suffero set 0: to SV117.

For high-accuracy binary resolution detector, set the number of pulses to four bite data of SV117 (high-order) and SV019 (low-order) in pulses (p) unit.

SV117 = number of pulses / 65536 (when = 0, set "-1" to SV117)

SV117 = number of pulses / 65536 (when =0, set "-1" SV019 = the remainder of number of "pulses / 65536"

When the NC is C70 and "SV019 > 32767", set "the reminder of above - 65536 (negative number)" to "SV019"

---Setting range

When SV117 = 0, the setting range is from 0 to 32767 (kp) When SV117 ≠ 0

nen SV117 ≠ 0 M700V, M70V, M70: 0 to 65536 (p) C70: -32768 to 32767 (p)

[#2220(PR)] SV020 RNG2 Main side detector resolution

Set the number of pulses per revolution of the motor side detector. OSA18 (-A48) (260,000 p/rev) ------- SV020 = 260 OSA105 (-A51) (1,000,000 p/rev) ----- SV020 = 1000 OSA166 (-A74) (16,000,000 p/rev) ----- SV020 = 16000

For linear motor

Set the number of pulses of the detector per magnetic pole pitch with SV118.

Set the number of pulses per revolution of the motor side detector.

For 1000 pulse unit resolution detector, set the number of pulses to SV020 in increments of 1000 pulse(kp).

In this case, make sure to set SV118 to "0".
For high-accuracy binary resolution detector, set the number of pulses to four bite data of

For nigh-accuracy binary resolution detector, set the furnition of pulses to four bite data of SV118 (injb-roder) and SV020 (low-order) in pulse(p) unit.

SV118 = number of pulses / 65536 (when =0, set *-1" to SV118)

SV019 = the remainder of *number of pulses / 65536

When the NC is C70 and *SV020 > 32767*, set "the reminder of above - 65536 (negative number)" to "SV020"

---Setting range

When SV118 = 0, the setting range is from 0 to 32767 (kp)

When SV118 ≠ 0

For M700V,M70V,M70: 0 to 65536 (p)

For C70: -32768 to 32767 (p)

[#2221] SV021 OLT Overload detection time constant

Normally, set to "60". (For machine tool builder adjustment.)

Related parameters: SV022

---Setting range 1 to 999 (s)

[#2222] SV022 OLL Overload detection level

Set the "Overload 1" (Alarm 50) current detection level as percentage to the stall current. Normally set this parameter to "150". (For machine tool builder adjustment.)

Related parameters: SV021

---Setting range

110 to 500 (Stall current %)

[#2223] SV023 OD1 Excessive error detection width during servo ON

Set the excessive error detection width in servo ON

<Standard setting value>

OD1=OD2= (Rapid traverse rate [mm/min]) / (60xPGN1) / 2 [mm]

When set to "0", the excessive error alarm detection will be ignored.

Related parameters: SV026

---Setting range

0 to 32767 (mm)

However, when SV084/bitC=1, the setting range is from 0 to 32767 (μ m). (Only for MDS-D/DH and MDS-DM)

【#2224】 SV024 INP In-position detection width

Set the in-position detection width.

Set the positioning accuracy required for the machine

The lower the setting is, the higher the positioning accuracy will be. However the cycle time (settling time) becomes longer.

The standard setting value is "50".

---Setting range 0 to 32767 (μ m)

[#2225(PR)] SV025 MTYP Motor/Detector type

Set the position detector type, speed detector type and motor type.

The setting value is a four-digit hex (HEX).

bit F-C : pen(HEX-4) Position detector

Semi-closed loop control by general motor

- Full-closed loop control by general motor Ball screw end detector (OSA105-ET2, OSA166-ET2) pen=6
 - For serial signal output rotary scale (including MDS-B-HR)
- pen=6
 For rectangular wave signal output scale
- pen=8
- For serial signal output linear scale (including MDS-B-HR and MPI scale)
- pen=A
 For speed command synchronization control
- Primary axis pen=A Secondary axis pen=D

For linear motor

pen=A

For direct-drive motor pen=2

bit B-8 : ent(HEX-3) Speed detector

For general motor ent=2

For linear motor ent=A For direct-drive motor ent=2

bit 7-0 : mtyp(HEX-2,1) Motor type

Set the motor type. Set this with SV017/bitF-C. For SV017/bitF-C = 1 (200V standard motor series)

Related parameters: SV007

[#2228(PR)] SV028 MSFT Magnetic pole shift amount (for linear/direct-drive motor)

Set this parameter to adjust the motor magnetic pole position and detector's installation phase when using linear motors or direct-drive motors.

During the DC excitation of the initial setup (SV034/bit4=1), set the same value displayed in

Related parameters: SV034/bit4, SV061, SV062, SV063

For general motor:

Not used. Set to "0".

---Setting range

-18000 to 18000 (Mechanical angle 0.01°)

"AFLT gain" on the NC monitor screen.

II Parameters Servo Parameters

[#2229] SV029 VCS Speed at the change of speed loop gain

Noise at high speed rotation including rapid traverse can be reduced by lowering the speed loop gain at high speeds.

Set the speed at which the speed loop gain changes. Use this with SV006 (VGN2).

When not using, set to "0"

-Setting range-

0 to 9999 (r/min)

[#2230] SV030 IVC Voltage non-sensitive band compensation

When 100% is set, the voltage reduction amount equivalent to the logical non-energization

in the PWM control will be compensated. When "0" is set, 100% compensation will be performed

Adjust in increments of 10% from the default value of 100%

If increased too much, vibration or vibration noise may be generated.

--Setting range

0 to 255 (%)

[#2231] SV031 OVS1 Overshooting compensation 1

This compensates the motor torque when overshooting occurs during positioning. This is valid only when the overshooting compensation (SV027/bitB.A) is selected.

Type 3 SV027(SSF1)/bitB,A(ovs) = 11

Set the compensation amount based on the motor stall current. Observing positioning droop waveform, increase in increments of 1% and find the value where overshooting does not occur

To vary compensation amount depending on the direction.

When SV042 (OVS2) is "0", change the SV031 (OVS1) value in both of the +/- directions to compensate

To vary the compensation amount depending on the command direction, set this and SV042 (OVS2). (SV031; + direction, SV042; - direction, However, the directions may be opposite

depending on other settings.)

When "-1" is set, the compensation will not be performed in the direction of the command.

Related parameters: SV027/bitB,A, SV034/bitF-C, SV042, SV082/bit2

---Setting range

-1 to 100 (Stall current %)

Note that the range will be "-1 - 10000" (Stall current 0.01%) when SV082/bit2 is "1".

[#2232] SV032 TOF Torque offset

Set the unbalance torque on vertical axis and inclined axis.

When the vertical axis pull up function is enabled, the pull up compensation direction is determined by this parameter's sign. When set to "0", the vertical axis pull up will not be executed

This can be used for speed loop delay compensation and collision detection function. To use load inertial estimation function (drive monitor display), set this parameter, friction torque (SV045) and load inertia display enabling flag(SV035/bitF).

Related parameters: SV007, SV033/bitE, SV059

---Setting range

-100 to 100 (Stall current %)

[#2233] SV033 SSF2 Servo function 2

Select the servo functions.

A function is assigned to each bit. Set this in hexadecimal format.

00000 - 20k - nfd1 - nfd3 - nfd2 rps zup Imc2a

bit F: Imc2a Lost motion compensation 2 timing

0: Normal 1: Change

bit E: zup Vertical axis pull up function

0: Stop 1: Enable

Related parameters: SV032, SV095

bit D: rps Speed setting increment

Change the setting units of the specified speed signal output speed (SV073) and safety observation safety speed (SV238).

0: mm/min 1: 100mm/min

Related parameters: SV073, SV238

bit C-8:

Not used. Set to "0".

bit 7-5: nfd2 Depth of Notch filter 2

Set the depth of Notch filter 2 (SV046).

bit7.6.5=

011: -8.5[dB] 100: -6.0[dB] 101: -4.1[dB] 110: -2.5[dB]

Set the adaptive frequency of Notch filter 1 in "#2238 SV038 FHz1".

bit 0 : zck Feedback error alarm 42 detection

This ignores the false detection of alarms when using multipoint Z phase scale including distance-coded reference scale.

0: Normal setting 1: Disable

[#2234] SV034 SSF3 Servo function 3

Select the servo functions. A function is assigned to each bit. Set this in hexadecimal format.

bit F-C: ovsn Overshooting compensation type 3 Non-sensitive band

Set the non-sensitive band of the model position droop overshooting amount in increments of 2μ m.

to the feed forward control, set the non-sensitive band of the model position droop and ignore the overshooting of the model. $0:0\ \mu\text{ m},\ 1:2\ \mu\text{ m},\ 2:4\ \mu\text{ m}, ---,\ E:2B\ \mu\text{ m},\ F:30\ \mu\text{ m}$

bit B-8: linN The number of parallel connections when using linear motors (for linear)

Set to "2" to perform 1 amplifier 2 motor control by linear servo.

bit 7-5 :

Not used. Set to "0".

bit 4 : dcd (linear/direct-drive motor)

0: Normal setting 1: DC excitation mode

Related parameters: SV061, SV062, SV063

bit 3:

Not used. Set to "0".

bit 2: mohn Thermistor temperature detection (linear/direct-drive motor)

0: Normal setting 1: Disable

bit 1 : has HAS control

This stabilizes the speed overshooting by torque saturation phenomenon. 0: Normal setting 1: Enable

Related parameters: SV084/bitF

Not used. Set to "0".

[#2235] SV035 SSF4 Servo function 4

Select the servo functions. A function is assigned to each bit Set this in hexadecimal format.

bit F : clt Inertia ratio display

- 0: Setting for normal use
 - Display the total inertia ratio estimated at acceleration/deceleration at the inertia ratio on the servo monitor screen

 To display it on the screen, set an imbalance torque and friction torque to both SV032 and
 - SV045 and repeat acceleration/deceleration operations for several times.

bit E-C: clG1 G1 Collision detection level

Set the collision detection level in the collision detection method 1 during cutting feed (G1) in multiples of that of rapid traverse (G0). When set to "0", detection of collision detection method 1 during cutting feed will be ignored.

G1 Collision detection level = G0 collision detection level (SV060) x clG1

bit B: cl2n Collision detection method 2

0: Enable 1: Disable

bit A:

Not used. Set to "0".

bit 9-8 : cltq Retract torque in collision detection

Set the retract torque in collision detection using the ratio of motor's maximum torque. hit9 8=

00: 100% 01: 90%

10: 80%(Standard) 11: 70%

bit 7 : ckab No signal detection 2

Set this to use rectangular wave output linear scale. This enables the detection of No signal 2 (alarm 21).

0: Disable 1: Enable

Not used. Set to "0".

[#2236(PR)] SV036 PTYP Power supply type/ Regenerative resistor type

MDS-D/DH Series: Power supply type

When connecting a power supply unit, set a code for each power supply unit.

bit F-C : amp

Not used. Set to "0".

bit B-8 : rtyp

Not used. Set to "0"

bit 7-0 : ptyp External emergency stop setting

Set the external emergency stop function. (Do not set a value other than specified.) 0: Disable 4: Enable

bit 3-0:

Not used. Set to "0".

Setting prohibited

[#2237] SV037 JL Load inertia scale

Set the motor axis conversion total load inertia including motor itself in proportion to the

SV037(JL)=(Jm+JI)/Jm×100

Jm: Motor inertia

JI: Motor axis conversion load inertia

For linear motor, set the gross mass of the moving sections in kg unit.

<<Drive monitor load inertia ratio display>> Set SV035/bitF=1 and imbalance torque and friction torque to both SV032 and SV045, and then repeat acceleration/deceleration for several times

---Setting range

For general motor: 0 to 5000 (%) For linear motor 0 to 5000 (kg)

[#2238] SV038 FHz1 Notch filter frequency 1

Set the vibration frequency to suppress when machine vibration occurs.

(Normally, do not set 80 or less.) Set to "0" when not using.

Related parameters: SV033/bit3-1, SV115

---Setting range-

0 to 2250 (Hz)

[#2239] SV039 LMCD Lost motion compensation timing

Set this when the timing of lost motion compensation type 2 does not match.

Adjust increments of 10 at a time.

---Setting range-

0 to 2000 (ms)

[#2240] SV040 LMCT Lost motion compensation non-sensitive band

Set the non-sensitive band of the lost motion compensation in the feed forward control.

When "0" is set, 2μ m is the actual value to be set. Adjust increments of 1μ m

---Setting range

0 to 255 (μm)

[#2241] SV041 LMC2 Lost motion compensation 2

Set this with SV016 (LMC1) only when you wish to vary the lost motion compensation

amount depending on the command directions. Normally, set to "0".

Related parameters: SV016

---Setting range

-1 to 200 (Stall current %)

Note that when SV082/bit2 is "1", the setting range is between -1 and 20000 (Stall current 0.01%)

[#2242] SV042 OVS2 Overshooting compensation 2

Set this with SV031 (OVS1) only when you wish to vary the overshooting compensation amount depending on the command directions. Normally, set to "0".

Related parameters: SV031

---Setting range

-1 to 100 (Stall current %) Note that when SV082/bit2 is "1", the setting range is between -1 and 10000 (Stall

current 0.01%).

[#2243] SV043 OBS1 Disturbance observer filter frequency

Set the disturbance observer filter band. Normally, set to "100". Setting values of 49 or less is equal to "0" setting

To use the disturbance observer, also set SV037 (JL) and SV044 (OBS2)

When disturbance observer related parameters are changed, lost motion compensation

needs to be readjusted. Set to "0" when not using

---Setting range

0 to 1000 (rad/s)

[#2244] SV044 OBS2 Disturbance observer ga

Set the disturbance observer gain. The standard setting is "100 to 300"

To use the disturbance observer, also set \$V037 (JL) and \$V043 (OB\$1). When disturbance observer related parameters are changed, lost motion compensation

needs to be readjusted

Set to "0" when not using

---Setting range 0 to 500 (%)

[#2245] SV045 TRUB Friction torque

Set the frictional torque when using the collision detection function.

To use load inertia estimation function (drive monitor display), set this parameter, imbalance torque (SV032) and load inertia display enabling flag (SV035/bitF).

-Setting range

0 to 255 (Stall current %)

[#2246] SV046 FHz2 Notch filter frequency 2

Set the vibration frequency to suppress when machine vibration occurs.

(Normally, do not set 80 or less.) Set to "0" when not using.

Related parameters: SV033/bit7-5, SV115

---Setting range-0 to 2250 (Hz)

[#2247] SV047 EC Inductive voltage compensation gain

Set the inductive voltage compensation gain. Standard setting value is "100".

If the current FB peak exceeds the current command peak, lower the gain.

---Setting range-

0 to 200 (%)

[#2248] SV048 EMGrt Vertical axis drop prevention time

Input the time required to prevent the vertical axis from dropping by delaying READY OFF until the brake works at an emergency stop

Increase in increments of 100ms at a time, find and set the value where the axis does not drop

When using a motor with a break of HF(-H) Series or HP(-H) Series, set to "200ms" as a standard.

When the pull up function is enabled (SV033/bitE=1), the pull up is established during the drop prevention time.

Related parameters: SV033/bitE, SV055, SV056

--Setting range

0 to 20000 (ms)

[#2249] SV049 PGN1sp Position loop gain 1 in spindle synchronous control

Set the position loop gain during spindle synchronization control (synchronous tapping and synchronization control with spindle C-axis).

synctronization United with spiriting Caxis).
Set the same value as that of the position loop gain for spindle synchronous tapping control. When performing the SHG control, set this parameter with SV050 (PGN2sp) and SV058 (SHGCsp).

When changing the value, change the value of "#2017 tap g Axis servo gain".

---Setting range

1 to 200 (rad/s)

[#2250] SV050 PGN2sp Position loop gain 2 in spindle synchronous control

When using SHG control during spindle synchronous control (synchronous tapping and synchronization control with spindle C-axis), set this parameter with SV049 (PGN1sp) and synchronization co SV058 (SHGCsp).

Make sure to set the value 8/3 times that of SV049

When not using the SHG control, set to "0"

---Setting range

0 to 999 (rad/s)

[#2251] SV051 DFBT Dual feedback control time constant

Set the control time constant in dual feed back.

When "0" is set, it operates at 1ms.

The higher the time constant is, the closer it gets to the semi-closed control, so the limit of the position loop gain will be raised.

For linear servo/direct-drive motor system Not used. Set to "0".

Related parameters: SV017/bit1, SV052

---Setting range

0 to 9999 (ms)

[#2252] SV052 DFBN Dual feedback control non-sensitive band

Set the non-sensitive band in the dual feedback control. Normally, set to "0".

For linear servo/direct-drive motor system

Not used. Set to "0"

Related parameters: SV017/bit1, SV052

---Setting range-

0 to 9999 (μ m)

[#2253] SV053 OD3 Excessive error detection width in special control

Set the excessive error detection width when servo ON in a special control (initial absolute position setting, stopper control and etc.). When "0" is set, excessive error detection will not be performed when servo ON during a

special control

---Setting range

0 to 32767 (mm)

However, when SV084/bitC=1, the setting range is from 0 to 32767 (μ m). (Only for MDS-D/DH and MDS-DM)

[#2254] SV054 ORE Overrun detection width in closed loop control

Set the overrun detection width in the full-closed loop control.

When the gap between the motor side detector and the linear scale (machine side detector) exceeds the value set by this parameter, it will be judged as overrun and "Alarm 43" will be detected.

When "-1" is set, the alarm detection will not be performed.
When "0" is set, overrun will be detected with a 2mm width.

For linear servo/direct-drive motor system Not used. Set to "0".

---Setting range

-1 to 32767 (mm)

However, when SV084/bitD=1, the setting range is from -1 to 32767 (μ m). (Only for MDS-D/DH and MDS-DM)

[#2255] SV055 EMGx Max. gate off delay time after emergency stop

Set the time required between an emergency stop and forced READY OFF.
Set the maximum value "+ 100ms" of the SV056 setting value of the servo drive unit

electrified by the same power supply unit.

When executing the vertical axis drop prevention, the gate off will be delayed for the length of time set at SV048 even when SV055's is smaller than that of SV048.

Related parameters: SV048, SV056

---Setting range

0 to 20000 (ms)

[#2256] SV056 EMGt Deceleration time constant at emergency stop

Set the time constant used for the deceleration control at emergency stop.

Set the time required to stop from rapid traverse rate (rapid).

The standard setting value is EMGt<=G0tL*0.9.

However, note that the standard setting value differs from the above-mentioned value when the setting value of "#2003:smgst Acceleration and deceleration modes bit 3-0:Rapid traverse acceleration/deceleration type" is 8 or F. Refer to Instruction Manual of the drive unit (section "Deceleration control") for details.

When the axis is used in the synchronous control, set the same value with minus sign to both axes

If one of the axes switches to dynamic brake by an alarm during deceleration control, another axis will also switch

Related parameters: SV048, SV055

--Setting range

-20000 to 20000 (ms)

[#2257] SV057 SHGC SHG control gain

When performing the SHG control, set to SV003(PGN1)*6

When not using the SHG control, set to "0"

Related parameters: SV003, SV004

---Setting range-

0 to 1200 (rad/s)

[#2258] SV058 SHGCsp SHG control gain in spindle synchronous control

When using SHG control during spindle synchronization control (synchronous tapping and synchronous control with spindle C-axis), set this parameter with SV049 (PGN1sp) and SV050 (PGN2sp).

Make sure to set the value 6 times that of SV049. When not using the SHG control, set to "0".

---Setting range

0 to 1200 (rad/s)

[#2259] SV059 TCNV Collision detection torque estimated gain

Set the torque estimated gain when using the collision detection function The standard setting value is the same as the load inertia ratio (SV037 setting value)

including motor inertia.
Set to "0" when not using the collision detection function.

Related parameters: SV032, SV035/bitF-8, SV037, SV045, SV060

<<Drive monitor load inertia ratio display>> Set SV035/bitF=1 and imbalance torque and friction torque to both SV032 and SV045, and

then repeat acceleration/deceleration for several times.

---Setting range

For general motor: 0 to 5000 (%) For linear motor: 0 to 5000 (kg)

[#2260] SV060 TLMT Collision detection level

When using the collision detection function, set the collision detection level at the G0

feeding. - When "0" is set, none of the collision detection function will work.

Related parameters: SV032, SV035/bitF-8, SV037, SV045, SV059

---Setting range

0 to 999 (Stall current %)

[#2261] SV061 DA1NO D/A output ch1 data No. / Initial DC excitation level

Input the data number you wish to output to the D/A output channel 1. When using the 2-axis drive unit, set "-1" to the axis that the data will not be output.

When the DC excitation is running (SV034/bit4=1):

Use this when the DC excitation is running (SV034/bit4=1) to adjust the initial magnetic pole position (when measuring the magnetic pole shift amount) for linear motor and directdrive motor.

Set the initial excitation level in DC excitation control.

Set 5% as standard.

Related parameters: SV062, SV063

--Setting range

-1 to 127

When the DC excitation is running (SV034/bit4=1): 0 to 100 (Stall current %)

[#2262] SV062 DA2NO D/A output ch2 data No. / Final DC excitation level

Input the data number you wish to output to the D/A output channel 2.
When using the 2-axis drive unit, set "-1" to the axis that the data will not be output.

When the DC excitation is running (SV034/bit4=1):

Use this when the DC excitation is running (SV034/bit4=1) to adjust the initial magnetic pole position (when measuring the magnetic pole shift amount) for linear motor and directdrive motor

Set the final excitation level in DC excitation control.

Set 5% as standard

When the magnetic pole shift amount measurement value is unsteady, adjust the value in increments of 5%

Related parameters: SV061, SV063

---Setting range

-1 to 127

When the DC excitation is running (SV034/bit4=1): 0 to 100 (Stall current %)

[#2263] SV063 DA1MPY D/A output ch1 output scale / Initial DC excitation time

Set output scale of the D/A output channel 1 in increment of 1/100. When "0" is set, the magnification is the same as when "100" is set.

When the DC excitation is running (SV034/bit4=1):
Use this when the DC excitation is running (SV034/bit4=1) to adjust the initial magnetic pole position (when measuring the magnetic pole shift amount) for linear motor and directdrive motor.

Set the initial excitation time in DC excitation control.

Set 500ms as standard

When the magnetic pole shift amount measurement value is unsteady, adjust the value in increments of 500ms

Related parameters: SV061, SV062

-Setting range

-32768 to 32767 (1/100-fold)
When the DC excitation is running (SV034/bit4=1): 0 to 10000 (ms)

[#2264] SV064 DA2MPY D/A output ch2 output scale

Set output scale of the D/A output channel 2 in increment of 1/100. When "0" is set, the magnification is the same as when "100" is set.

---Setting range

-32768 to 32767 (1/100-fold)

[#2265] SV065 TLC Machine end compensation gain

The shape of the machine end is compensated by compensating the spring effect from the machine end to the motor end.

Set the machine end compensation gain. Measure the error amount by roundness measurement and estimate the setting value by the following formula.

Compensation amount (μ m) = Command speed F(mm/min)2 * SV065 / (Radius R(mm) * SV003 * 16,200,000)

Set to "0" when not using

---Setting range

-30000 to 30000 (Acceleration ratio 0.1%)

【#2266-2272】 SV066 - SV072

This parameter is set automatically by the NC system

[#2273(PR)] SV073 FEEDout Specified speed output speed

Set the specified speed.
Also set SV082/bit9.8 to output digital signal.

--Setting range

-32768 to 32767 (r/min)

However, when SV033/bitD=1, the setting range is from -32768 to 32767 (100mm/min).

---Setting range-0 to 99999 (r/min)

[#3006] smax 2 Maximum rotation speed (Gear: 01)

Set the maximum spindle speed with gear 01.

Set this as slimt >= smax.

By comparing the S command value and the values of gear 1 - 4, a spindle gear shift command value and the values of gear 1 - 4.

---Setting range 0 to 99999 (r/min)

[#3007] smax 3 Maximum rotation speed (Gear: 10)

Set the maximum spindle speed with gear 10.

Set this as slimt >= smax.

By comparing the S command value and the values of gear 1 - 4, a spindle gear shift command will be output automatically.

---Setting range 0 to 99999 (r/min)

[#3008] smax 4 Maximum rotation speed (Gear: 11)

Set the maximum spindle speed with gear 11.

Set this as slimt >= smax.

By comparing the S command value and the values of gear 1 - 4, a spindle gear shift command will be output automatically.

---Setting range-0 to 99999 (r/min)

[#3009] ssift 1 Shift rotation speed (Gear: 00)

Set the spindle speed for gear shifting with gear 00.

(Note) Setting too large value may cause a gear nick when changing gears.

---Setting range-

0 to 32767 (r/min)

[#3010] ssift 2 Shift rotation speed (Gear: 01)

Set the spindle speed for gear shifting with gear 01.

(Note) Setting too large value may cause a gear nick when changing gears.

---Setting range

0 to 32767 (r/min)

[#3011] ssift 3 Shift rotation speed (Gear: 10)

Set the spindle speed for gear shifting with gear 10.

(Note) Setting too large value may cause a gear nick when changing gears.

--Setting range

0 to 32767 (r/min)

[#3012] ssift 4 Shift rotation speed (Gear: 11)

Set the spindle speed for gear shifting with gear 11.

(Note) Setting too large value may cause a gear nick when changing gears.

---Setting range 0 to 32767 (r/min)

[#3013] stap 1 Tap rotation speed (Gear: 00)

Set the maximum spindle speed during tapping cycle with gear 00.

---Setting range 0 to 99999 (r/min)

[#3014] stap 2 Tap rotation speed (Gear: 01)

Set the maximum spindle speed during tapping cycle with gear 01.

-Setting range-0 to 99999 (r/min)

[#3015] stap 3 Tap rotation speed (Gear: 10)

Set the maximum spindle speed during tapping cycle with gear 10.

---Setting range--0 to 99999 (r/min)

[#3016] stap 4 Tap rotation speed (Gear: 11)

Set the maximum spindle speed during tapping cycle with gear 11.

---Setting range-0 to 99999 (r/min)

[#3017] stapt 1 Tap time constant (Gear: 00)

Set the time constant for constant inclination synchronous tapping cycle with gear 00 (linear acceleration/deceleration pattern).

---Setting range 1 to 5000 (ms)

[#3018] stapt 2 Tap time constant (Gear: 01)

Set the time constant for constant inclination synchronous tapping cycle with gear 01 (linear acceleration/deceleration pattern).

---Setting range 1 to 5000 (ms)

[#3019] stapt 3 Tap time constant (Gear: 10)

Set the time constant for constant inclination synchronous tapping cycle with gear 10 (linear acceleration/deceleration pattern).

---Setting range 1 to 5000 (ms)

[#3020] stapt 4 Tap time constant (Gear: 11)

Set the time constant for constant inclination synchronous tapping cycle with gear 11 (linear acceleration/deceleration pattern).

---Setting range 1 to 5000 (ms)

[#3021] sori Orientation rotation speed

Set the spindle orientation speed.

Set the speed for when the spindle rotates at the constant speed.

---Setting range 0 to 32767 (r/min)

【#3022】 sgear Encoder gear ratio

Set the gear ratio of the spindle to the detector.

Setting value 0 —> Detector: Spindle = 1:1
Setting value 1 —> Detector: Spindle = 1:2
Setting value 2 —> Detector: Spindle = 1:2
Setting value 2 —> Detector: Spindle = 1:4
Setting value 3 —> Detector: Spindle = 1:4
Setting value 3 —> Detector: Spindle = 1:8
This parameter is enabled only when "S-analog" is set by the spindle connection parameter

"#3024 sout"

---Setting range 0 to 3

[#3023] smini Minimum rotation speed

Set the minimum spindle speed.

If an S command below this setting is issued, the spindle will rotate at the minimum speed set by this parameter.

---Setting range 0 to 32767 (r/min)

[#3024(PR)] sout Spindle connection

Select the type of interface with a spindle drive unit.

0: No connection with a spindle 1: Dedicated network, dedicated optical communication

- 2 5: S-analog
- -Setting range 0 to 5

[#3025(PR)] enc-on Spindle encoder

Set the connection condition of a spindle's detector.

- the connection condition of a spinions detector.

 Setting 0 ---> Not connected

 Setting 1 ---> Connected (Spindle detector connection check function is enabled.)

 Setting 2 ---> Serially connected
- ---Setting range-
 - O to 2

[#3026] cs_ori Selection of winding in orientation mode

- 0: Perform orientation using the coil selected when the orientation command is issued.
- Use the coil I whenever the orientation command is issued.

[#3027] cs_syn Selection of winding in spindle synchronous mode

0: Select the coil H or L based on the actual spindle motor speed (calculated from commanded speed) when spindle synchronization starts. (Coil switch is not performed during spindle synchronous tapping control. This control is carried out using the coil selected at start.)

If the actual spindle motor speed is less than the setting of SP020, the coil L is selected. But if the actual speed exceeds the setting of SP020, the coil H is selected.

Use the coil H whenever the spindle synchronization command is issued.

[#3028] sprcmm Tap cycle spindle forward run/reverse run M con

Set the M codes for the spindle forward run/reverse run commands.

High-order 3 digits: Set the M code for spindle forward run command.

Low-order 3 digits: Set the M code for spindle reverse run command.

When "0" is set, the M code for spindle forward run command is handled as "3" and the M code for spindle reverse run command as "4".

---Setting range

0 to 999999

[#3029] tapsel Asynchronous tap gear selection

Select whether to use the tapping speed or maximum speed for the gear that is selected when an asynchronous tapping command is issued.

0: Tapping speed 1: Maximum speed

This parameter is enabled only when the M-function synchronous tapping cycle enable parameter "#1272 ext08/bit1" is ON.

[#3030]

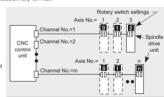

Not used. Set to "0".

[#3031(PR)] smcp_no Drive unit I/F channel No. (spindle)

Set the interface channel No. of CNC control unit to which the spindle is connected and the axis No. within each channel

Set this parameter in 4-digit (hexadecimal) format.

HEX-4 : Drive unit interface channel No. HEX-3 : Not used. Set to "0".

HEX-2, 1 : Axis No.

For a spindle to be connected to CNC via analog interface, set to "0000".

---Setting range

1001 to 1010, 2001 to 2010

- For MDS-DM-SPV2/SPV3 Series

These drive units have no rotary switches for axis No. selection.

The spindle axis No. is fixed to 1st axis, so set "01" as the number of axes, (last 2 digits).

[#3032]

【#3035(PR)】 spunit Output unit

Select the data unit for communication with the spindle drive unit.

This selection is applied to the data communicated between the NC and spindle drive unit as well as the spindle movement data. Note, however, that this parameter is enabled only for the MDS-D Series spindle drive unit.

Spindle/C axis depends on this parameter setting and the C axis output unit (servo) is

inored. When MDS-D Series is used, follow the setting of "#1003 ctrl_unit".

- - B: 1 μ m
 - C: 0.1 μ m
 - D: 10nm

[#3037] taps21 Synchronous tap switching spindle speed 2 (Gear: 00)

Set the spindle speed at which the 2nd step acceleration/deceleration time constant is to be switched with gear 00.

- ---Setting range-
 - 0 to 99999 (r/min)

[#3038] taps22 Synchronous tap switching spindle speed 2 (Gear: 01)

Set the spindle speed at which the 2nd step acceleration/deceleration time constant is to be switched with gear 01.

- ---Setting range-
 - 0 to 99999 (r/min)

[#3039] taps23 Synchronous tap switching spindle speed 2 (Gear: 10)

Set the spindle speed at which the 2nd step acceleration/deceleration time constant is to be switched with gear 10.

- ---Setting range
 - 0 to 99999 (r/min)

[#3040] taps24 Synchronous tap switching spindle speed 2 (Gear: 11)

Set the spindle speed at which the 2nd step acceleration/deceleration time constant is to be switched with gear 11.

- ---Setting range-
- 0 to 99999 (r/min)

[#3041] tapt21 Synchronous tap switching time constant 2 (Gear: 00)

Set the time constant to reach synchronous tapping switching spindle speed 2 (taps21-24) with gear 00.

- ---Setting range
 - 1 to 5000 (ms)

[#3042] tapt22 Synchronous tap switching time constant 2 (Gear: 01)

Set the time constant to reach synchronous tapping switching spindle rotation speed 2 (taps21 - 24) with gear 01.

- ---Setting range-
 - 1 to 5000 (ms)

[#3043] tapt23 Synchronous tap switching time constant 2 (Gear: 10)

Set the time constant to reach synchronous tapping switching spindle rotation speed 2 (taps21 - 24) with gear 10.

- -Setting range
- 1 to 5000 (ms)

[#3044] tapt24 Synchronous tap switching time constant 2 (Gear: 11)

Set the time constant to reach synchronous tapping switching spindle rotation speed 2 (taps21 - 24) with gear 11.

- ---Setting range
 - 1 to 5000 (ms)

[#3045] tapt31 Synchronous tap switching time constant 3 (Gear: 00)

Set the time constant to reach the maximum speed (smax1 - 4) with gear 00.

- -Setting range
 - 1 to 5000 (ms)

[#3046] tapt32 Synchronous tap switching time constant 3 (Gear: 01)

Set the time constant to reach the maximum speed (smax1 - 4) with gear 01.

- -Setting range
 - 1 to 5000 (ms)

[#3047] tapt33 Synchronous tap switching time constant 3 (Gear: 10)

Set the time constant to reach the maximum speed (smax1 - 4) with gear 10.

- ---Setting range-
 - 1 to 5000 (ms)

[#3048] tapt34 Synchronous tap switching time constant 3 (Gear: 11)

Set the time constant to reach the maximum speed (smax1 - 4) with gear 11.

Setting range

1 to 5000 (ms)

[#3049] spt Spindle synchronization acceleration/deceleration time constant

Set the acceleration/deceleration time constant for when the commanded spindle synchronization speed changes under spindle synchronization control.

-Setting range

0 to 9999 (ms)

[#3050] sprly Spindle synchronization rotation speed attainment level

Set the level of difference between the commanded synchronization spindle speeds and actual speeds of both the basic and synchronous spindles during spindle synchronization below which the spindle speed synchronization complete signal will go ON.

---Setting range

0 to 4095 (pulse) (1 pulse = 0.088°)

[#3051] spplv Spindle phase synchronization attainment level

Set the level of phase difference between the basic and synchronous spindles during spindle synchronization, below which the spindle phase synchronization complete signal will go ON.

---Setting range

0 to 4095 (pulse) (1 pulse = 0.088°)

[#3052] spplr Spindle motor spindle relative polarity

Set the spindle motor and spindle's relative polarity.

0: Positive polarity

Spindle CW rotation at motor CW rotation Negative polarity
 Spindle CCW rotation at motor CW rotation

---Setting range 0000/0001 (HEX)

[#3053] sppst Spindle encoder Z -phase position

Set the deviation amount from the spindle's basic point to the spindle detector's Z phase Obtain the deviation amount, considering a clockwise direction as positive when viewed from the spindle's front side.

--Setting range

0 to 359999 (1/1000°)

[#3054] sptc1 Spindle synchronization multi-step acceleration/deceleration changeover speed 1

Set the spindle speed for changing the 1st step's acceleration/deceleration time constant.

---Setting range

0 to 99999 (r/min)

[#3055] sptc2 Spindle synchronization multi-step acceleration/deceleration changeover speed 2

Set the spindle speed for changing the 2nd step's acceleration/deceleration time constant

-Setting range 0 to 99999 (r/min)

sptc3 Spindle synchronization multi-step acceleration/deceleration changeover

Set the spindle speed for changing the 3rd step's acceleration/deceleration time constant.

-Setting range

0 to 99999 (r/min)

[#3057] sptc4 Spindle synchronization multi-step acceleration/deceleration changeover

Set the spindle speed for changing the 4th step's acceleration/deceleration time constant.

---Setting range

0 to 99999 (r/min)

sptc5 Spindle synchronization multi-step acceleration/deceleration changeover [#3058] speed 5

Set the spindle speed for changing the 5th step's acceleration/deceleration time constant.

--Setting range

0 to 99999 (r/min)

II Parameters

Spindle Parameters

[#3059] sptc6 Spindle synchronization multi-step acceleration/deceleration changeover speed 6

Set the spindle speed for changing the 6th step's acceleration/deceleration time constant.

---Setting range---0 to 99999 (r/min)

[#3060] sptc7 Spindle synchronization multi-step acceleration/deceleration changeover speed 7

Set the spindle speed for changing the 7th step's acceleration/deceleration time constant.

--Setting range---

[#3061] spdiv1 Magnification for time constant changeover speed 1

Set the acceleration/deceleration time constant from the spindle synchronization multi-step acceleration/deceleration changeover speed 1 (sptc1) to the spindle synchronization multi-step acceleration/deceleration changeover speed 2 (sptc2). Set this as a magnification in relation to the spindle synchronization acceleration/deceleration time constant (spt).

---Setting range--

[#3062] spdiv2 Magnification for time constant changeover speed 2

Set the acceleration/deceleration time constant from the spindle synchronization multi-step acceleration/deceleration changeover speed 2 (sptc2) to the spindle synchronization multi-step acceleration/deceleration changeover speed 3 (sptc3). Set this as a magnification in relation to the spindle synchronization acceleration/deceleration time constant (spt).

---Setting range--0 to 127

[#3063] spdiv3 Magnification for time constant changeover speed 3

Set the acceleration/deceleration time constant from the spindle synchronization multi-step acceleration/deceleration changeover speed 3 (sptc3) to the spindle synchronization multi-step acceleration/deceleration changeover speed 4 (sptc4). Set this as a magnification in relation to the spindle synchronization acceleration/deceleration time constant (spt).

---Setting range---0 to 127

[#3064] spdiv4 Magnification for time constant changeover speed 4

Set the acceleration/deceleration time constant from the spindle synchronization multi-step acceleration/deceleration changeover speed 4 (sptc4) to the spindle synchronization multi-step acceleration/deceleration changeover speed 5 (sptc5). Set this as a magnification in relation to the spindle synchronization acceleration/deceleration time constant (spt).

---Setting range--0 to 127

[#3065] spdiv5 Magnification for time constant changeover speed 5

Set the acceleration/deceleration time constant from the spindle synchronization multi-step acceleration/deceleration changeover speed 5 (sptc5) to the spindle synchronization multi-step acceleration/deceleration changeover speed 6 (sptc6). Set this as a magnification in relation to the spindle synchronization acceleration/deceleration time constant (spt).

---Setting range---0 to 127

[#3066] spdiv6 Magnification for time constant changeover speed 6

Set the acceleration/deceleration time constant from the spindle synchronization multi-step acceleration/deceleration changeover speed 6 (sptc6) to the spindle synchronization multi-step acceleration/deceleration changeover speed 7 (sptc7). Set this as a magnification in relation to the spindle synchronization acceleration/deceleration time constant (spt).

---Setting range---

[#3067] spdiv7 Magnification for time constant changeover speed 7

Set the acceleration/deceleration time constant for the spindle synchronization multi-step acceleration/deceleration changeover speed 7 (sptc7) and higher. Set this as a magnification in relation to the spindle synchronization acceleration/deceleration time constant (spt).

---Setting range---0 to 127

[#3068] symtm1 Phase synchronization start confirmation time

Set the time to confirm that synchronization is attained before phase synchronization control is started. When "0" is set, the time will be 0.5 seconds. When "100" or less is set, the time will be

---Setting range---0 to 9999 (ms)

100ms.

[#3069] symtm2 Phase synchronization end confirmation time

Set a period of waiting time for phase synchronization control's completion as a time in which the speed stays within the attainment range.

When "0" is set, the time will be 0.5 seconds, When "100" or less is set, the time will be

100ms.

--Setting range 0 to 9999 (ms)

[#3070] syprt Phase synchronization speed

Set the amount of speed fluctuation of synchronous spindle during phase synchronization control. Set this as a proportion to commanded speed.

When "0" is set, the amount will be 5%.

---Setting range-0 to 100 (%)

[#3071(PR)] SscDrSelSp Speed monitor Door selection

Select which door group of the speed monitoring a spindle belongs to.

o000: Belong to the door 1 group.
0001: Belong to the door 1 group.
0002: Belong to the door 2 group.
0003: Belong to the door 2 group.

(Note) Speed monitoring is not executed when SP229:SFNC9/bitF is "OFF".

-Setting range 0000 to 0003 (HEX)

[#3072(PR)] Ssc Svof Filter Sp Speed monitor Error detection time during servo OFF

Set the error detection time for when an error of command speed monitoring or feedback speed monitoring is detected during servo OFF.

The alarm will occur if actual speed exceeds safe speed or safe rotation speed for a period of time longer than this setting

When "0" is set, the detection time will be 200 (ms).

---Setting range 0 to 9999 (ms)

[#3101] sp_t 1 Time constant for spindle rotation with S command (Gear: 00)

Set the acceleration/deceleration time constant for spindle rotation using the S command (spindle control mode = speed operation mode) with gear 00 (Linear acceleration deceleration pattern).

---Setting range 0 to 30000 (ms)

[#3102] sp_t 2 Time constant for spindle rotation with S command (Gear: 01)

Set the acceleration/deceleration time constant for spindle rotation using the S command (spindle control mode = speed operation mode) with gear 01 (Linear acceleration) deceleration pattern).

---Setting range-0 to 30000 (ms)

[#3103] sp_t 3 Time constant for spindle rotation with S command (Gear: 10)

Set the acceleration/deceleration time constant for spindle rotation using the S command (spindle control mode = speed operation mode) with gear 10 (Linear acceleration) deceleration pattern).

---Setting range 0 to 30000 (ms)

[#3104] sp_t 4 Time constant for spindle rotation with S command (Gear: 11)

Set the acceleration/deceleration time constant for spindle rotation using the S command (spindle control mode = speed operation mode) with gear11 (Linear acceleration deceleration pattern).

---Setting range 0 to 30000 (ms)

【#3105】 sut Speed reach range

Set the speed deviation rate with respect to the commanded speed, at which the speed

reach signal will be output. It will be 15% when set to "0"

If the speed deviation is smaller than 45r/min, it will be set as 45r/min.

---Setting range 0 to 100 (%)

[#3106] zrn_typ Zero point return specifications

Select the zero point return specification. Functions are allocated to each bit

Set this in hexadecimal format.

bit F: Spindle zero point detection with contactless switch

1: Enable spindle zero point detection using proximity switch 0. Normal

bit E: Interpolation mode selection in orientation

- 0: Interpolation mode (Use the interpolation mode gain "SP002 PGN".)
 1: Non-interpolation mode (Use the non-interpolation mode gain "SP001 PGV")
 Select this when vibration occurs since the gain is too high during the orientation.

bit D-B:

Not used. Set to "0".

bit A-9: Spindle/C axis zero point return direction

- bitA.9= 00: Short-cut
- 01: Forward run 10: Reverse run

bit 8 : Designate zero point return/deceleration stop of spindle/C axis

0: Zero point return 1: Deceleration stop

bit 7: Synchronous tapping command polarity

0: Forward direction 1: Reverse direction

bit 6-5: Synchronous tapping zero point return direction

- bit 6.5=
- 00: Short-cut 01: Forward run 10: Reverse run
- bit 4: Designate zero point return/deceleration stop in synchronous tapping

1: Deceleration stop 0: Zero point return

bit 3:

Not used. Set to "0"

bit 2-1: Orientation direction

- bit 2,1=
- 00: Short-cut 01: Forward run
- 10: Reverse run

bit 0 : Z phase detection direction

0: Forward direction 1: Reverse direction

[#3107] ori_spd Orientation command speed

Set the spindle speed during orientation command.

- ---Setting range-
 - 1 to 99999 (r/min)

[#3108] ori_sft In-position shift amount for orientation

Set the orientation stop position.

The clockwise direction when viewed from the load side is considered as minus (-).

---Setting range-

-35999 to 35999 (0.01°)

[#3109] zdetspd Z phase detection speed

When "#3106/bitF = 0" (Normal), set the spindle speed at initial Z phase detection. Guideline for the initial setting value is from 50 to 300

When "#3106/bitF = 1" (Spindle zero point proximity switch detection enabled), set the spindle speed at initial spindle zero point proximity switch detection.

(Note) When spindle zero point proximity switch detection is enabled, the rotation direction of the orientation/zero point return (synchronous tapping, spindle/C axis) will follow Z phase detection direction. And the speed will follow Z phase detection speed. Guideline for the initial setting value is from 50 to 300.

---Setting range-

1 to 99999 (r/min)

[#3110] tap_spd Synchronous tapping zero point return speed

Set the synchronous tapping zero point return speed.

-Setting range-

1 to 99999 (r/min)

[#3111] tap_sft Synchronous tapping zero point return shift amount

Set the synchronous tapping zero point return shift amount.

-Setting range 0.00 to 35999 (0.01°)

[#3112] cax_spd Spindle C axis zero point return speed

Set the spindle C axis zero point return speed.

---Setting range 1 to 99999 (r/min)

[#3113] cax_sft Spindle C axis zero point return shift amount

Set the spindle C axis zero point return shift amount

-Setting range

0.00 to 359999 (0.001°)

[#3114] cax_para_chg Spindle/C axis parameter switch

Select whether to switch detector's parameters between spindle control and C axis control during spindle/C axis control.

0: Not switch

1 · Switch

---Setting range 0/1 (Standard: 0)

[#3115] sp2 t1 Time constant in orientation/position loop reference position return (Gear: 00)

Set the acceleration/deceleration time constant to reach the spindle's limit speed (slimt) when spindle rotates in orientation/position loop zero point return method (C axis, tapping) using gear 00 (Linear acceleration/deceleration pattern).

(Note) Set a value that is bigger than the values set by "#3101 sp_t1 - #3104 sp_t4".

---Setting range

0 to 30000 (ms)

sp2_t2 Time constant in orientation/position loop reference position return (Gear: 01)

Set the acceleration/deceleration time constant to reach the spindle's limit speed (slimt), when spindle rotates in the orientation/position loop zero point return method (C axis, tapping) using gear 01 (Linear acceleration/deceleration pattern).

(Note) Set a value that is bigger than the values set by "#3101 sp_t1 - #3104 sp_t4".

---Setting range

0 to 30000 (ms)

[#3117] sp2_t3 Time constant in orientation/position loop reference position return (Gear:

Set the acceleration/deceleration time constant to reach the spindle's limit speed (slimt), when spindle rotates in the orientation/position loop zero point return method (C axis, tapping) using gear 10 (Linear acceleration/deceleration pattern).

(Note) Set a value that is bigger than the values set by "#3101 sp_t1 - #3104 sp_t4".

---Setting range 0 to 30000 (ms)

[#3118] sp2_t4 Time constant in orientation/position loop reference position return (Gear:

Set the acceleration/deceleration time constant to reach the spindle's limit speed (slimt) when spindle rotates in the orientation/position loop zero point return method (C axis, tapping) using gear 11 (Linear acceleration/deceleration pattern).

(Note) Set a value that is bigger than the values set by "#3101 sp t1 - #3104 sp t4".

---Setting range-

0 to 30000 (ms)

[#3120] staptr Time constant reduction rate in high-speed synchronous tapping

When performing high-speed synchronous tapping, set the reduction rate of the time constant compared to the time constant in normal synchronous tapping.

(Setting "0"or "100" will be regarded as reduction rate zero, so the time constant won't be reduced.)

E.g.) When set to "10", time constant in high-speed synchronous tapping will be 90% of that in normal synchronous tapping.

---Setting range

0 to 100(%)

[#3121] tret Turret indexing

Select the validity of turret indexing

0: Invalid

1: Valid

[#3122] GRC Turret side gear ratio

Set the number of teeth on the turret side when the gear selection command (control input 4/bit6, 5) is set to 00. Set a value of GRC so that the ratio of GRC to the spindle side gear ratio (#13057 SP057) will be 1:N (an integer). If this parameter is set to "0", it will be regarded as "1".

-Setting range 0 to 32767

[#3123] tret_spd Turret indexing speed

Set the turret end indexing speed when in turret indexing.

When this parameter is set to 0, the value of Orientation command speed (#3107 ori spd)

will be used for the turret indexing speed

---Setting range-0 to 32767(r/min)

[#3124] tret_t Turret indexing time constant

Set the acceleration/deceleration time constant to reach Limit rotation speed (#3001 slimt) at gear 00 when in turret indexing (linear acceleration/deceleration pattern). Set this parameter to a larger value than #3115 sp2_t1 at gear 00.

---Setting range

0 to 30000 (ms)

[#3125] tret_inpos Turret indexing in-position width

Set the position error range in which the index positioning complete signal is output when in turret indexing. When this parameter is set to 0, the value of In-position width (#13024 SP024) will be used for this width.

-Setting range 0 to 32767(1°/1000)

[#3126] tret_fin_off Index positioning complete signal OFF time

Set the time to forcedly turn OFF the index positioning complete signal since the indexing start signal turns ON. If this period of time has not passed yet, the index positioning complete signal will not turn ON even at the completion of index positioning.

---Setting range 0 to 10000 (ms)

[#3127] SPECSP Spindle specification

bit0: Select the gear changeover method.

0: Gear change type 1

1: Gear change type 2

---Setting range-0x0000 to 0xffff (hexadecimal)

[#3128] ori_spec Orientation specification

bit0: Orientation imposition advance output

0: Invalid 1: Valid

---Setting range 0x0000 to 0xffff (hexadecimal)

[#3129] cax_spec Spindle/C axis specification

Not used. Set to "0"

[#3130] syn_spec Spindle synchronization specification

bit0: Tool spindle synchronization II (hobbing) automatic compensation selection

1: Compensate hobbing axis delay (advance) with workpiece axis.

0: No compensation

[#3131] tap_spec Synchronous tapping specification

Not used. Set to "0"

[#3132] ori_inp2 2nd in-position width for orientation

Use this when detecting a different in-position from the normal in-position detection, such as advancing the in-position signal. When using, set a bigger value than the value of the spindle parameter SP024.

---Setting range---0 to 32767 (1dea/1000)

[#3133] spherr Hobbing axis delay (advance) allowable angle

Set the allowable angle between the commanded position and actual position of hobbing axis when it is in tool spindle synchronization II (hobbing) mode (X18AE ON), and also when hobbing axis and workpiece axis are synchronizing (X18A9 ON).

---Setting range

0 to 32767 (1deg/1000)

[#3134] sphtc Primary delay time constant for hobbing axis automatic compensation

Set the primary delay time constant of hobbing axis automatic compensation primary delay filter control in tool spindle synchronization II (hobbing). When set to 0, primary delay filter control is invalid.

---Setting range 0 to 32767 (ms)

[#3135] sfwd_g Feed forward gain for hobbing axis

Set the feed forward gain for the hobbing axis in tool spindle synchronization II (hobbing) mode

---Setting range 0 to 200 (%)

[#3137] stap_ax_off High-speed synchronous tapping disabled axis

Set the high-speed synchronous tapping disabled axis

bit 0-F: High-speed synchronous tapping disabled axis

0: Enabled

1: Disabled

If communication between drive units is disabled for a certain axis, set the axis's bits of all the spindles as disabled

If communication between drive units is disabled for a certain spindle, set all the bits of the spindle as disabled (0xFFFF). (Note) Each bit (bit0 -) corresponds to the order of the axis name parameter (#1013

[#3138] motor_type Spindle motor type

axname) setting

Set the spindle motor type. The set type will be displayed on the drive monitor screen, and it will be also output to the system configuration data.

---Setting range-

Character string within 26 characters including A-Z, a-z, 0-9, "." (decimal point), "-" (hyphen), "" (slash) (Cleared by inputting "0".)

[#3140(PR)] S_DINSp Speed observation input door No.

Set the door signal input in the drive unit.

Use this parameter only when the axis with a door signal belongs to several door groups. The correspondence between the door signals and bits are as follows.

bit0 : Door1 signal

bit1 : Door2 signal

If the axis does not receive any door signal, set to "0" An error (Y20 0027) will occur in the following cases.

everal bits are enabled.

- Any bit other than those set in "#3071 S DSISp" is enabled.

---Setting range 0000 to 0002 (HEX)

[#13001] SP001 PGV Position loop gain non-interpolation mode

Set the position loop gain for "Non-interpolation" control mode

When the setting value increases, the command tracking ability will enhance and the positioning settling time can be shorter. However, the impact on the machine during cceleration/deceleration will increase.

Use the selection command, the control mode "bit 2, 1, 0 = 000" in control input 4. (Note) The control mode is commanded by NC.

---Setting range

1 to 200 (1/s)

[#13002] SP002 PGN Position loop gain interpolation mode

Set the position loop gain for "interpolation" control mode

When the setting value increases, the command tracking ability will enhance and the positioning settling time can be shorter. However, the impact on the machine during acceleration/deceleration will increase. Use the selection command, the control mode "bit 2, 1, 0 = 010 or 100" in control input 4.

(Note) The control mode is commanded by NC.
When carrying out the SHG control, set SP035(SFNC3) bitC to "1".

---Setting range

1 to 200 (1/s)

[#13003] SP003 PGS Position loop gain spindle synchronization

Set the position loop gain for "spindle synchronization" control mode.

When the setting value increases, the command tracking ability will enhance and the positioning settling time can be shorter. However, the impact on the machine during acceleration/deceleration will increase.

Use the selection command, the control mode "bit 2, 1, 0 = 001" in control input 4. (Note) The control mode is commanded by NC. When carrying out the SHG control, set SP036(SFNC4) bit4 to "1".

---Setting range

1 to 200 (1/s)

[#13004] SP004

[#13005] SP005 VGN1 Speed loop gain 1

Set the speed loop gain

Set this according to the load inertia size

The higher setting value will increase the accuracy of control, however, vibration tends to occur

fly vibration occurs, adjust by lowering by 20 to 30%.

The final value should be 70 to 80% of the value at which the vibration stops.

---Setting range 1 to 9999

[#13006] SP006 VIA1 Speed loop lead compensation 1

Set the speed loop integral control gain.
The standard setting is "1900". Adjust the value by increasing/decreasing the value by

about 100

Raise this value to improve the contour tracking accuracy in high-speed cutting.

Lower this value when the position droop does not stabilize (when the vibration of 10 to 20Hz occurs).

--Setting range 1 to 9999

[#13007] SP007 VIL1 Speed loop delay compensation 1

Set this parameter when the limit cycle occurs in the full-closed loop or overshooting occurs in positioning

For MDS-D/DH-SP, the control method can be selected by SP033(SFNC1)/bit1,0(vcnt). Normally, use "Changeover type 2".

When setting this parameter, make sure to set the torque offset "SP050(TOF)".

When not using, set to "0"

---Setting range 0 to 32767

[#13008] SP008 VGN2 Speed loop gain 2

Normally SP005(VGN1), SP006(VIA1), SP007(VIL1) are used. By setting "SP035(SFNC3)/bit1(vgin), SP035(SFNC3)/bit9(vgn) or SP036(SFNC4)/

bit(vgs)=1", gain 2 can be used according to the application.

Gain 2 can also be used by setting "Speed gain set 2 changeover request (control input 5/

Refer to SP005(VGN1), SP006(VIA1), SP007(VIL1) for procedures.

---Setting range

1 to 9999

[#13009] SP009 VIA2 Speed loop lead compensation 2

Normally SP005(VGN1), SP006(VIA1), SP007(VIL1) are used. By setting "SP035(SFNC3)/bit1(vgin), SP035(SFNC3)/bit9(vgn) or SP036(SFNC4)/

bit1(vgs)=1", gain 2 can be used according to the application.

Gain 2 can also be used by setting "Speed gain set 2 changeover request (control input 5/ bitC) = 1

Refer to SP005(VGN1), SP006(VIA1), SP007(VIL1) for procedures.

--Setting range

1 to 9999

[#13010] SP010 VIL2 Speed loop delay compensation 2

Normally SP005(VGN1), SP006(VIA1), SP007(VIL1) are used.
By setting "SP035(SFNC3)/bit1(vgin), SP035(SFNC3)/bit9(vgn) or SP036(SFNC4)/bit1(vgs)=1", gain 2 can be used according to the application.
Gain 2 can also be used by setting "Speed gain set 2 changeover request (control input 5/

bitC) = 1Refer to SP005(VGN1), SP006(VIA1), SP007(VIL1) for procedures.

---Setting range 0 to 32767

【#13011】 SP011

Not used. Set to "0".

[#13012] SP012

Not used. Set to "0".

[#13013] SP013

Not used. Set to "0".

[#13014] SP014 PY1 Minimum excitation rate 1

Set the minimum value for the variable excitation rate. The standard setting is "50". Set to "0" when using an IPM spindle motor.

response or rigidity during servo lock.

If noise including gear noise is loud, select a small value. However, a larger setting value is more effective for impact response. (Note) When setting a value at "50 or more", check if there is no problem with gear noise,

motor excitation noise, vibration during low-speed rotation or vibration when the servo is locked during orientation stop, etc.

When setting a value at "less than 50", check if there is no problem with the impact load

---Setting range

0 to 100 (%)

[#13015] SP015 PY2 Minimum excitation rate 2

Normally, SP014(PY1) is used.

Notifiailly, SP014[FT1] is Useu.

By setting "SP035(SFNC3)/bit2(pyin), SP035(SFNC3)/bit4(pyn) or SP036(SFNC4)/bit2(pys)=1", the excitation rate 2 can be used according to the application. The excitation rate 2 can also be used by setting "the minimum excitation rate 2 changeover request (control input 5/bit8) = 1". Refer to SP014(PY1) for procedures.

Set to "0" when using an IPM spiridle mother.

---Setting range 0 to 100 (%)

[#13016] SP016 DDT Phase alignment deceleration rate

Set the single-rotation position alignment deceleration rate for orientation stopping, phase alignment while rotating and switching from non-interpolation mode to spindle

synchronization mode while rotating.

When the load inertia is larger, the setting value should be smaller.

When the setting value is larger, the orientation in-position and single-rotation position alignment complete faster, but the impact applied on the machine will increase

To change the deceleration rate only during rotation command (command F \triangle T \neq 0), set this parameter together with SP070 (KDDT).

---Setting range

1 to 32767 (0.1(r/min)/ms)

[#13017(PR)] SP017 SPEC1 Spindle specification 1

Select the spindle specification. A function is allocated to each bit. Set this in hexadecimal format

bit F-C : msr Motor series selection

- 0: 200V specification IM spindle motor 1: 200V specification IPM spindle motor
- 2: 400V specification IM spindle motor
- 3: 400V specification IPM spindle motor
- 4: 200V specification Tool spindle motor
 Only "0" or "4" setting is available for MDS-D-SPJ3 Series.
- For MDS-DM Series For MDS-DM-SPV2/SPV3, set to "0".

bit B-5:

Not used. Set to "0".

bit 4 : fdir Position feedback

0: Forward polarity 1: Reverse polarity

bit 3 : vfb Speed feedback filter

0: Disable 1: Enable (2250Hz)

bit 2 : seqh READY ON sequence

0: Normal 1: High-speed

bit 1 : dfbx Dual feedback control

0: Stop 1: Start

bit 0 : fdir2 Speed feedback polarity

0: Forward polarity 1: Reverse polarity

[#13018(PR)] SP018 SPEC2 Spindle specification 2

Select the spindle specification A function is allocated to each bit. Set this in hexadecimal format.

bit F-A:

Not used. Set to "0".

bit 9: mpg Earth fault detection

0: Disable 1: Enable (standard) Set "0" and it is constantly "Enable" for MDS-D-SPJ3 Series.

bit 8 : spsu Speed setting unit

0: r/min 1: 4 r/min

bit 7-6:

Not used. Set to "0".

bit 5: mkch Coil switch function

0: Disable 1: Enable

bit 4-2:

Not used. Set to "0".

bit 1 : oplp Open loop

0: Disable 1: Enable

bit 0:

Not used. Set to "0".

[#13019(PR)] SP019 RNG1 Sub side detector resolution

[For semi-closed loop]

Set the same value as SP020 (RNG2). (Refer to the explanation of SP020.)

[For full-closed loop]

Set the number of pulses per revolution of the speed detector. When using ABZ pulse encoder, used this with SP097(RNG1ex).

E.a.: The setting for ABZ pulse encoder "OSE-1024-3-15-68" SP019 = 4096 SP097 = -1

---Setting range

-32768 to 32767 (kp/rev) When using SP097: (p/rev)

[#13020(PR)] SP020 RNG2 Main side detector resolution

Set the number of pulses per revolution of the main side detector. When using the serial changer MDS-B-HR, use this with SP098(RNG2ex).

Detector

Detector TS5691(128 teeth): SP020 = 2000 TS5691(180 teeth): SP020 = 2880 TS5691(256 teeth): SP020 = 4000 TS5691(384 teeth): SP020 = 6000 TS5691(512 teeth): SP020 = 8000

MPCI : SP020 = 7200

MBE205: SP020 = 2000

OSA18(-A48): SP020 = 260

---Setting range-

-32768 to 32767 (kp/rev) When using SP098: (p/rev)

[#13021(PR)] SP021 OLT Overload detection time constant

Set the detection time constant of Overload 1 (Alarm 50). (For machine tool builder adjustment)

Normally, set to "60". Set to "300" when using an IPM spindle motor.

---Setting range-

1 to 15300 (s)

[#13022] SP022 OLL Overload detection level

Set the current detection level of "Overload 1" (Alarm 50) as a percentage against the motor Short-time rated output current. (For machine tool builder adjustment) Normally, set to "120".

Set to "100" when using an IPM spindle motor.

-Setting range-

1 to 200 (Short-time rated %)

[#13023] SP023 OD1 Excessive error detection width (interpolation mode - spindle synchronization)

Set the excessive error detection width for the interpolation mode and spindle

synchronization

The standard setting is "120".

When set to "0", the excessive error detection will not be performed.

---Setting range-

1 to 32767 (°)

[#13024] SP024 INP In-position width

Set the in-position detection width.

Set the positioning accuracy required to the machine

Lower setting value increases the positioning accuracy, but makes the cycle time (settling

time) longer The standard setting is "875".

---Setting range--0 to 32767 (1° /1000)

[#13025] SP025 INP2 2nd in-position width

Use this when detecting an in-position different from normal in-position width such as

advancing the in-position signal

The procedure is the same as SP024 (INP). The standard setting is "875"

---Setting range-

0 to 32767 (1° /1000)

[#13026(PR)] SP026 TSP Maximum motor speed

Set the maximum motor speed.

If the motor speed exceeds the set maximum speed, an overspeed alarm will occur.

---Setting range

1 to 32767 (r/min)

【#13027】 SP027 ZSP Motor zero speed

Set the motor speed for detecting zero speed

If the motor speed drops below the set speed, the zero speed detection turns ON. The standard setting is "50".

---Setting range--

1 to 1000 (r/min)

[#13028] SP028 SDTS Speed detection set value

Set the motor speed for detecting the speed

If the motor speed drops below the set speed, the zero speed detection turns ON.

The standard setting is 10% of the maximum motor speed.

---Setting range

10 to 32767 (r/min)

[#13029] SP029 SDTR Speed detection reset width

Set the hysteresis width in which the speed detection changes from ON to OFF. If the setting value is small, the speed detection will chatter easily. The standard setting is "30".

---Setting range

10 to 1000 (r/min)

[#13030] SP030 SDT2 2nd speed detection setting value

Set the specified speed of the specified speed output

When carrying out digital output of the specified speed output, set SP229(SFNC9)/bitC(sdt2) to "1".

It is not available for MDS-D-SPJ3 Series.

---Setting range

-32768 to 32767 (r/min)

【#13031(PR)】 SP031 MTYP Motor type

Set the control system of the spindle drive unit.

2200: Semi closed loop control

4200: Full closed loop control by using spindle side ABZ pulse output detector

6200: Full closed loop control by using spindle side serial output detector

[#13035(PR)] SP035 SFNC3 Spindle function 3

Select the spindle function.
A function is allocated to each bit.
Set this in hexadecimal format.

bit F-D:

Not used. Set to "0".

bit C : shgn SHG control

0: Stop 1: Start

bit B:

Not used. Set to "0".

bit A : pyn Excitation rate selection

0: Select Excitation rate 1 1: Select Excitation rate 2

bit 9 : vgn Speed loop gain set selection

0: Select Set 1 1: Select Set 2

bit 8-3:

Not used. Set to "0".

bit 2 : pyin Excitation rate selection

The excitation rate after the in-position can be selected.

0: Select Excitation rate 1 1: Select Excitation rate 2

bit 1 : vgin Speed loop gain set selection

The speed loop gain set after the in-position can be selected.

0: Select Set 1 1: Select Set 2

bit 0:

Not used. Set to "0".

【#13036(PR)】 SP036 SFNC4 Spindle function 4

Select the spindle function. A function is allocated to each bit. Set this in hexadecimal format.

bit F-8:

Not used. Set to "0".

bit 7 : mksl Spindle coil selection

0: Select the coil commanded during synchronization 1: Select high-speed coil

bit 6-5:

Not used. Set to "0".

bit 4 : shgs SHG control

0: Stop 1: Start

bit 3:

Not used. Set to "0".

bit 2 : pys Excitation rate selection

0: Select Excitation rate 1 1: Select Excitation rate 2

bit 1 : vgs Speed loop gain set selection

0: Select Gain Set 1 1: Select Gain set 2

bit 0:

Not used. Set to "0".

[#13037] SP037 JL Load inertia scale

Set "the motor inertia + motor axis conversion load inertia" in proportion to the motor inertia. SV037(JL)=(Jm+JI)/Jmx100

Jm: Motor i nertia

JI: Motor axis conversion load inertia

--Setting range---0 to 5000 (%)

[#13038] SP038 FHz1 Notch filter frequency 1

Set the vibration frequency to suppress when machine vibration occurs.

(Enabled at 50 or more.) When not using, set to "0"

---Setting range 0 to 2250 (Hz)

[#13039] SP039 LMCD Lost motion compensation timing

Set this parameter when the lost motion compensation timing does not match.

Adjust by increasing the value by 10 at a time.

---Setting range-0 to 2000 (ms)

[#13040] SP040 LMCT Lost motion compensation non-sensitive band

Set the non-sensitive band of the lost motion compensation in the feed forward control. When "0" is set, 2° /1000 is set, Adjust by increasing the value by 1° /1000 at a time.

---Setting range-

-32768 to 32767 (1° /1000)

[#13041] SP041 LMC2 Lost motion compensation 2

Set this parameter with SP048(LMC1) only to vary the lost motion compensation amount depending on the command directions.

Normally, set to "0"

---Setting range

-1 to 200 (Short-time rated %)
Note that when SP227/bit2 is "1", the range will be -1 to 20000 (Short-time rated 0.01%)

[#13042] SP042 OVS2 Overshooting compensation 2

Set this parameter with SP043(OVS1) only to vary the lost motion compensation amount depending on the command directions.

Normally, set to "0"

---Setting range

-1 to 100 (Short-time rated %)
Note that when SP227/bit2 is "1", the range will be -1 to 10000 (Short-time rated 0.01%).

[#13043] SP043 OVS1 Overshooting compensation 1

Set this parameter when overshooting occurs during positioning. This compensates the motor torque during positioning.

This is valid only when the overshooting compensation SP033 (SFNC1/ovs) is selected.

[Type 3 "When SP033(SFNC1)/ bitB.A(ovs)=11"]

Use this when performing overshoot compensation in the feed forward control during arc cutting mode.

Set the compensation amount based on the motor short-time rated current.

Increase the value in increments of 1% to find the value where overshooting ceases.

[To vary compensation amount depending on the direction] When SV042 (OVS2) is "0", change the SP043 (OVS1) value in both +/- directions to compensate To change the compensation amount depending on the command direction, set this with SP042 (OVS2).

(SP043: + direction, SP042: - direction, However, the directions may be opposite

depending on other settings.)
When "-1" is set, the compensation will not be performed in the command direction.

-Setting range

-1 to 100 (Short-time rated %)
Note that when SP227/bit2 is "1", the range will be -1 to 10000 (Short-time rated 0.01%

[#13044] SP044 OBS2 Disturbance obs

Set the disturbance observer gain. The standard setting is "100".

To use the disturbance observer, also set SP037(JL), SP045(OBS1) and SP226(SFNC6)/

bitE(obs)

When not using, set to "0".

---Setting range

0 to 500 (%)

[#13045] SP045 OBS1 Disturbance observer filter frequency

Set the disturbance observer filter band. Normally, set to "100".

To use the disturbance observer, also set SP037(JL), SP044(OBS2) and SP226(SFNC6)/

bitE(obs)

When not using, set to "0".

---Setting range

0 to 1000 (rad/s)

[#13046] SP046 FHz2 Notch filter frequency 2

Set the vibration frequency to suppress when machine vibration occurs.

(Enabled at 50 or more.) When not using, set to "0"

---Setting range

0 to 2250 (Hz)

[#13047] SP047 EC Inductive voltage compensation gain

Set the inductive voltage compensation gain. Normally, set to "100".

Lower the gain when the current FB peak exceeds the current command peak

---Setting range 0 to 200 (%)

[#13048] SP048 LMC1 Lost motion compensation 1

Set this parameter when the protrusion (that occurs due to the non-sensitive band by

friction, torsion, backlash, etc.) at quadrant change is too large.

This compensates the torque at quadrant change.

This is valid only when the overshooting compensation SP033 (SFNC1/lmc) is selected.

[Type 2 "When SP033(SFNC1)/bit9,8(lmc)=10"] Set the compensation amount based on the motor short-time rated current.

The standard setting is double of the friction torque. The compensation amount will be 0 when "0" is set.

[Other than type 2 "When SP033(SFNC1)/bit9,8(Imc) # 10"] ost motion compensation (Type 2) is not executed

[To vary compensation amount depending on the direction]

(SP048: + direction, SP041: - direction, However, the directions may be opposite

depending on other settings.)
When "-1" is set, the compensation will not be performed in the command direction.

-Setting range

-1 to 200 (Short-time rated %)
Note that when SP227/bit2 is "1", the range will be -1 to 20000 (Short-time rated 0.01%)

[#13049] SP049 FFC Acceleration rate feed forward gain

When a relative error in the synchronous control is too large, set this parameter to the axis that is delaying

The standard setting is "0"

The standard setting in the SHG control is "100"

Adjust relative errors in acceleration/deceleration by increasing the value by 50 to 100.

---Setting range 0 to 999 (%)

【#13050】 SP050 TOF Torque offset

Set the imbalance torque

---Setting range

-100 to 100 (Short-time rated %)

[#13051] SP051 DFBT Dual feed back control time constant

Set the control time constant in dual feed back.

When the function is valid, the standard setting is "100". When "0" is set, the value is 1 ms When the time constant is increased, the operation will get closer to the semi-closed control and the limit of the position loop gain will be raised.

However, this cannot be used when the spindle slip occurs in machine configuration such as V-belt drive.

---Setting range

0 to 9999 (ms)

[#13052] SP052 DFBN Dual feedback control non-sensitive band

Set the non-sensitive band in the dual feedback control

Normally set to "0"

-Setting range 0 to 9999 (1/1000")

[#13053] SP053 ODS Excessive error detection width (non-interpolation mode)

Set the excessive error detection width in non-interpolation mode.

Standard setting value: ODS = Maximum motor speed [r/min] x 6/PGV/2

When set to "0", the excessive error detection will not be performed.

---Setting range

0 to 32767 (°)

[#13054] SP054 ORE Overrun detection width in closed loop control

Set the overrun detection width in the full-closed loop control.

When the gap between the main side detector and the sub side detector exceeds the set value, it is judged as an overrun and "Alarm 43" is detected. When "-1" is set, the alarm detection will not be performed.

When "0" is set, overrun will be detected with 2

In the full-closed loop control, normally set this parameter to "360". During V-belt drive, set to "-1"

---Setting range

-32768 to 32767 (°)

[#13055] SP055 EMGx Max. gate off delay time after emergency stop

Set the time required to forcibly execute READY OFF after the emergency stop is input.

Normally set to "20000".

When "0" is set, READY OFF is forcibly executed with "7000ms".

When the set time is shorter than the time to decelerate and stop, the spindle will stop with the dynamic brake after the set time is out.

---Setting range---0 to 29900 (ms)

[#13056] SP056 EMGt Deceleration time constant at emergency stop

Set the time constant used for the deceleration control at emergency stop. Set the time required to stop from the maximum motor speed (TSP).

When "0" is set, the deceleration control is executed with "7000ms".

---Setting range----29900 to 29900 (ms)

[#13057(PR)] SP057 GRA1 Spindle side gear ratio 1

Set the number of teeth on the spindle side when "the gear selection command (control input 4/bit6, 5) "is set to "00".

---Setting range---

[#13058(PR)] SP058 GRA2 Spindle side gear ratio 2

Set the number of teeth on the spindle side when "the gear selection command (control input 4/bit6, 5)" is set to "01".

---Setting range---1 to 32767

[#13059(PR)] SP059 GRA3 Spindle side gear ratio 3

Set the number of teeth on the spindle side when "the gear selection command (control input 4/bit6, 5) " is set to "10".

---Setting range-

[#13060(PR)] SP060 GRA4 Spindle side gear ratio 4

Set the number of teeth on the spindle side when "the gear selection command (control input 4/bit6, 5) " is set to "11".

---Setting range-1 to 32767

[#13061(PR)] SP061 GRB1 Motor side gear ratio 1

Set the number of teeth on the motor side when "the gear selection command (control input 4/bit6, 5) " is set to "00".

---Setting range--

[#13062(PR)] SP062 GRB2 Motor side gear ratio 2

Set the number of teeth on the motor side when "the gear selection command (control input 4/bit6, 5)" is set to "01".

---Setting range---1 to 32767

[#13063(PR)] SP063 GRB3 Motor side gear ratio 3

Set the number of teeth on the motor side when "the gear selection command (control input 4/bit6, 5)" is set to "10".

---Setting range---1 to 32767

[#13064(PR)] SP064 GRB4 Motor side gear ratio 4

Set the number of teeth on the motor side when "the gear selection command (control input 4/bit6, 5)" is set to "11".

-Setting range---

1 to 32767

[#13065] SP065 TLM1 Torque limit 1

Set the torque limit value when "the torque limit (control input 1/bitA, 9, 8)" is set to "001".

---Setting range---

0 to 999 (Short-time rated %)

[#13066] SP066 TLM2 Torque limit 2

Set the torque limit value when "the torque limit (control input 1/bitA, 9, 8)" is set to "010".---Setting range---

0 to 999 (Short-time rated %)

【#13067】 SP067 TLM3 Torque limit 3

Set the torque limit value when "the torque limit (control input 1/bitA, 9, 8) " is set to "011".

---Setting range---

0 to 999 (Short-time rated %)

[#13068] SP068 TLM4 Torque limit 4

Set the torque limit value when "the torque limit (control input 1/bitA, 9, 8)" is set to "100".

-Setting range

0 to 999 (Short-time rated %)

[#13069] SP069 PCMP Phase alignment completion width

Set the single-rotation position alignment completion width for phase alignment and changing from non-interpolation to spindle synchronization mode during rotation. Set the rotation error that is required to the machine.

When the setting value decreases, the rotation error will decrease, but the cycle time (settling time) will get longer. The standard setting is "875".

---Setting range

0 to 32767 (1° /1000)

[#13070] SP070 KDDT Phase alignment deceleration rate sca

Set the scale for SP016 (DDT) to change the deceleration rate only during rotation

command (Command F $J T \neq 0$). When the setting value increases, the single-rotation position alignment will be completed faster, but the impact to the machine will also increase. When not using, set to "0".

---Setting range

0 to 255 (1/16-fold)

[#13071] SP071 DIQM Variable current limit during deceleration, lower limit value

Set this parameter to adjust the deceleration time by changing the current limit value during deceleration depending on the motor speed

As shown below, set the lower limit rate of the current limit in SP071 (DIQM), and use with SP072 (DION) When DIQM is set to 100%, the current limit value in deceleration (TMRL) set in the motor

---Setting range 0 to 999 (%)

[#13072] SP072 DIQN Variable current limit during deceleration, break point speed

Set this parameter to adjust the deceleration time by changing the current limit value during deceleration depending on the motor speed.

As shown below, set the lower limit rate of the current limit in SP071 (DIQM), and use with SP072 (DIQN).

When DIQM is set to 100%, the current limit value in deceleration (TMRL) set in the motor constants is applied

---Setting range 1 to 32767 (r/min)

[#13073] SP073 VGVN Variable speed gain target value

If noise is bothersome during high speed rotation, it may be reduced by lowering the speed loop gain at high speed.

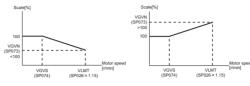

Set this value to ensure the adequate response by suppressing noise and vibration at low speeds and increasing the speed loop gain at high speeds for a high-speed spindle of machining center, etc.

As shown below, set the speed loop gain rate for the overspeed detection speed in SP073 (VGVN), and use with SP074 (VGVS).

When not using, set to "O."

The overspeed detection speed (VLMT) is 115% of the maximum motor speed (TSP).

This function can be used when either VGN1 or VGN2 is selected.

ne sneed loop gain at high sneed

---Setting range-0 to 999 (%)

[#13074] SP074 VGVS Variable speed gain change start spee

If noise is bothersome during high speed rotation, it may be reduced by lowering the speed loop gain at high speed.

Set this value to ensure the adequate response by suppressing noise and vibration at low speeds and increasing the speed loop gain at high speeds for a high-speed spindle of machining center, etc

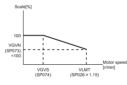

machining center, etc.

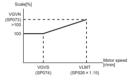

As shown below, set the speed loop gain rate for the overspeed detection speed in SP073 (VGVN), and use with SP074 (VGVS).

When not using, set to "0".

The overspeed detection speed (VLMT) is 115% of the maximum motor speed (TSP).

This function can be used when either VGN1 or VGN2 is selected.

---Setting range-0 to 32767 (r/min)

[#13075] SP075 DWSH Slip compensation scale during regeneration high-speed co

Set the slip frequency scale during deceleration

Normally, set to "0". (For machine tool builder adjustment)

---Setting range

0 to 255 (1/16-fold)

[#13076] SP076 DWSL Slip compensation scale during regeneration low-speed coil

Set the slip frequency scale at deceleration when using the low-speed coil. Normally, set to "0". (For machine tool builder adjustment)

-Setting range

0 to 255 (1/16-fold)

[#13077] SP077 IQA Q axis current lead compensation

Set the current loop gain.
To use the coil switch function, set the current loop gain for when the high-speed coil is selected.

The setting value is determined by the motor's electrical characteristics so that the value is fixed to each motor used.

Set the value given in the spindle parameter list. (For machine tool builder adjustment)

---Setting range

1 to 20480

[#13078] SP078 IDA D axis current lead compensation

Set the current loop gain.

To use the coil switch function, set the current loop gain for when the high-speed coil is selected.

The setting value is determined by the motor's electrical characteristics so that the value is fixed to each motor used

Set the value given in the spindle parameter list. (For machine tool builder adjustment)

---Setting range

1 to 20480

[#13079] SP079 IQG Q axis current gain

Set the current loop gain

To use the coil switch function, set the current loop gain for when the high-speed coil is selected.

The setting value is determined by the motor's electrical characteristics so that the value is fixed to each motor used.

Set the value given in the spindle parameter list. (For machine tool builder adjustment)

---Setting range--

[#13080] SP080 IDG Daxis current gain

Set the current loop gain.

To use the coil switch function, set the current loop gain for when the high-speed coil is selected.

The setting value is determined by the motor's electrical characteristics so that the value is fixed to each motor used.

Set the value given in the spindle parameter list. (For machine tool builder adjustment)

---Setting range---1 to 8192

[#13081] SP081 IQAL Q axis current lead compensation low-speed coil

When using coil switch function, set the current loop gain for when the low-speed coil is selected.

The setting value is determined by the motor's electrical characteristics so that the value is fixed to each motor used.

Set the value given in the spindle parameter list. (For machine tool builder adjustment)

--Setting range-1 to 20480

[#13082] SP082 IDAL D axis current lead compensation low-speed coil

When using coil switch function, set the current loop gain for when the low-speed coil is selected.

The setting value is determined by the motor's electrical characteristics so that the value is fixed to each motor used.

Set the value given in the spindle parameter list. (For machine tool builder adjustment)

--Setting range---

1 to 20480

[#13083] SP083 IQGL Q axis current gain low-speed coil

When using coil switch function, set the current loop gain for when the low-speed coil is selected.

The setting value is determined by the motor's electrical characteristics so that the value is fixed to each motor used.

Set the value given in the spindle parameter list. (For machine tool builder adjustment)

---Setting range-

1 to 8192

[#13084] SP084 IDGL D axis current gain low-speed coil

When using coil switch function, set the current loop gain for when the low-speed coil is selected.

The setting value is determined by the motor's electrical characteristics so that the value is fixed to each motor used. Set the value given in the spindle parameter list. (For machine tool builder adjustment)

---Setting range---

1 to 8192

[#13085] SP085 LMCk Lost motion compensation 3 spring constant

Set the compensation amount for the spring constant when using lost motion compensation type 3.

When not using, set to "0".

---Setting range---

0 to 32767 (0.01%/0.001°)

[#13086] SP086 LMCc Lost motion compensation 3 viscous coefficient

Set the compensation amount for the viscous coefficient when using lost motion compensation type 3.

When not using, set to "0".

---Setting range

0 to 32767 (0.01% - s/ 1°)

[#13087] SP087 FHz4 Notch filter frequency 4

Set the vibration frequency to suppress when machine vibration occurs.

(Enabled at 50 or more.)
When not using, set to "0"

---Setting range---

0 to 2250 (Hz)

[#13088] SP088 FHz5 Notch filter frequency 5

Set the vibration frequency to suppress when machine vibration occurs.

(Enabled at 50 or more.) When not using, set to "0".

---Setting range--

0 to 2250 (Hz)

[#13089] SP089 TMKQ Spindle output stabilizing gain Q axis

Set the magnification of the torque current stabilizing gain. (For machine tool builder

When set to "0", the torque current stabilization is disabled.

When not using, set to "0"

-Setting range 0 to 32767

[#13090] SP090 TMKD Spindle output stabilizing gain D axis

Set the magnification of the excitation current stabilizing gain. (For machine tool builder

adjustment)

When set to "0", the excitation current stabilization is disabled. When not using, set to "0".

---Setting range 0 to 32767

[#13091] SP091

Not used. Set to "0".

[#13092] SP092

Not used. Set to "0".

[#13093] SP093

Not used. Set to "0".

[#13094] SP094 MPV Magnetic pole error detection speed

When not using, set to "0"

In the magnetic pole position detection function, the command motor speed and motor speed during the position command stop are monitored.

Set the command motor speed level and motor speed level during the position command stop in "r/min" unit.

When the command motor speed level is set to "0", the magnetic pole position error is

detected at 10r/min.

Set to "10" as a standard setting when the magnetic pole position error detection function is enabled

This detects the magnetic pole position error when the motor speed is "100r/min"

Ten-thousands digit, Thousands digit ------ Command motor speed level (10r/min) Hundreds digit, Tens digit, Ones digit ------ Motor speed level (10r/min)

---Setting range 0 to 31999

[#13095] SP095 VIAX Lead compensation scale during high-response acceleration/

Set the magnification against delay/lead compensation (SP006) of the high-response acceleration/deceleration (valid when SP226(SFNC6)/ bitD (vup) is set to "1"). Normally, set to "0". Set this parameter to suppress overshooting when the speed is reached

---Setting range 0 to 10000 (0.01%)

[#13096] SP096 SDW Speed slowdown allowable width

When the spindle slows down due to multiple cutting, set the processable speed as percentage against the NC command speed.

When "0" is set, the magnification is the same as when "85" is set. When set to "-1", the

allowable width will be disabled.

---Setting range

-1,0 to 100(%)

[#13097] SP097 RNG1ex Sub side extension detector resolution

Normally set to "0"

When setting the sub side detector resolution in pulse (p) unit, set the number of pulses to four bite data of SP097 (upper 16 bits) and SP019 (lower 16 bits).

SP097 = number of pulses / 65536 (When = 0, set SP097 = -1)

SP019 = the remainder of "number of pulses / 65536" (values can be set by the pulse) For detectors not using the upper 16 bits, set to "-1".

When "SP019 > 32767", set "the remainder of above - 65536 (negative number)" to "SP019".

---Setting range

-1.0 to 32767

[#13098] SP098 RNG2ex Main side extension detector resolution

Normally set to "0"

When setting the main side detector resolution in pulse (p) unit, set the number of pulses to four bite data of SP098 (upper 16 bits) and SP020 (lower 16 bits).

SP098 = number of pulses / 65536 (When = 0, set SP098 = -1)
SP020 = the remainder of "number of pulses' / 65536" (values can be set by the pulse)
For detectors not using the upper 16 bits, set to "-1".

When "SP020 > 32767", set "the remainder of above - 65536 (negative number)" to "SP020".

--Setting range -1,0 to 32767

[#13113] SP113 OPLP Current command value for open loop Set the current command value for when the open loop control is enabled. When "0" is set, the state will be the same as when "50" is set.

When not using, set to "0"

The open loop control is enabled when "SP018 (SPEC2)/bit1 (oplp)" is set to "1".

---Setting range

0 to 999 (Short-time rated %)

[#13114] SP114 MKT Coil changeover gate cutoff timer

Set the time required to cut off the gate when turning OFF/ON the coil switch contactor.

The value should be longer than the coil switch contactor's OFF/ON time. The standard setting is "150".

-Setting range

0 to 3500 (ms)

[#13115] SP115 MKT2 Coil changeover current limit timer

Set the time required to limit the current immediately after the coil switch contactor ON/OFF is completed and the gate is turned ON.

The standard setting is "250".

---Setting range---0 to 3500 (ms)

[#13116] SP116 MKIL Coil changeover current limit value

Set the time required to limit the current immediately after the coil switch contactor ON/OFF is completed and the gate is turned ON.
The standard setting is "120".

---Setting range

0 to 999 (Short-time rated %)

[#13117] SP117 SETM Excessive speed deviation timer

Set the time to detect the speed excessive error alarm.

Set the time required to the machine.
The standard setting is "12".

---Setting range 0 to 60 (s)

[#13118(PR)] SP118 MSFT Magnetic pole shift amount

Set the magnetic pole shift amount of IPM spindle motor.

During DC excitation of the initial setup: Set the same value displayed in the "AFLT gain" on the NC monitor screen in SP225(SFNC5)/bit4(dcd)=1. When not using, set to "0".

---Setting range

-18000 to 18000 (electrical angle 0.01°)

[#13119] SP119 FSP4 Notch filter specifications 4

When not using, set to "0"

Set the target attenuation and damping coefficient of the notch filter.

To determine the value, multiply the damping coefficient by 10000, and add it to the

absolute value of the target attenuation -dB.

The setting range of each coefficient is as follow

Damping coefficient: 0.01 - 1.00 (Increment: 0.01) When "0" is set, the actual value to be set is 1.00.

Target attenuation: -80db - -1db (Increment: 1dB)

When "0" is set, the actual value to be set is -80. Fig.: When the target attenuation is -40dB, and damping coefficient is 1.00 1.00×10000 + ABS(-40) = 10040

---Setting range 0 to 32767

[#13120] SP120 FSP5 Notch filter specifications 5

When not using, set to "0"

Set the target attenuation and damping coefficient of the notch filter.

To determine the value, multiply the damping coefficient by 10000, and add it to the

absolute value of the target attenuation -dB. The setting range of each coefficient is as follows

Damping coefficient: 0.01 - 1.00 (Increment: 0.01) When "0" is set, the actual value to be set is 1.00.

Target attenuation: -80db - -1db (Increment: 1dB)

When "0" is set, the actual value to be set is -80. E.g.: When the target attenuation is -40dB, and damping coefficient is 1.00 1.00×10000 + ABS(-40) = 10040

---Setting range 0 to 32767

[#13121] SP121 MP Kpp Magnetic pole detection position loop gain

Set the position loop gain in the magnetic polar detection loop.
This is used in the initial magnetic polar detection when the IPM spindle motor is turned ON.
Set to '0' when using an IM spindle motor.

--Setting range 0 to 32767

[#13122] SP122 MP Kvp Magnetic pole detection speed loop gain

Set the speed loop gain in the magnetic polar detection loop.

This is used in the initial magnetic polar detection when the IPM spindle motor is turned ON.

Set to "0" when using an IM spindle motor.

---Setting range

0 to 32767

[#13123] SP123 MP Kvi Magnetic pole detection speed loop lead compensation

Set the speed loop lead compensation in the magnetic polar detection loop.

This is used in the initial magnetic polar detection when the IPM spindle motor is turned ON. Set to "0" when using an IM spindle motor.

---Setting range

0 to 32767

[#13124] SP124 ILMTsp Magnetic pole detection current limit value

Set the current limit value for the magnetic polar detection loop

This is used in the initial magnetic polar detection when the IPM spindle motor is turned ON. Set to "0" when using an IM spindle motor.

-Setting range

0 to 999 (Short-time rated %)

[#13125] SP125 DA1NO D/A output ch1 data No. / Initial DC excitation level

Input the desired data number to D/A output channel.

[When driving an IPM spindle motor (MDS-D/DH Series)] Use in the DC excitation function.

DC excitation: Set the initial excitation level when SP225(SFNC5)/bit4(dcd)=1.

When "0" is set, the state will be the same as when "20" is set.

--Setting range

-32768 to 32767

[#13126] SP126 DA2NO D/A output ch2 data No. / Final DC excitation leve

Input the desired data number to D/A output channel.

[When driving an IPM spindle motor (MDS-D/DH Series)] Use in the DC excitation function.

DC excitation: Set the final excitation level when SP225(SFNC5)/bit4(dcd)=1. When "0" is set, the state will be the same as when "50" is set.

--Setting range

-32768 to 32767

[#13127] SP127 DA1MPY D/A output ch1 output scale / Initial DC excitation tim

Set the output scale in increments of 1/100. When "0" is set, the scale is the same as when "100" is set.

[When driving an IPM spindle motor (MDS-D/DH Series)] Use in the DC excitation function.

DC excitation: Set the initial excitation time when SP225(SFNC5)/bit4(dcd)=1.

When "0" is set, the state will be the same as when "10000" is set.

---Setting range

-32768 to 32767 (1/100-fold)

[#13128] SP128 DA2MPY D/A output ch2 output scale

Set the output scale in increments of 1/100

When "0" is set, the scale is the same as when "100" is set.

---Setting range

-32768 to 32767 (1/100-fold)

[#13129(PR)] SP129

Set the unique constants for the spindle motor. (High-speed coil)

The setting value is determined by the motor's mechanical and electrical characteristics and specifications, so normally set the value given in the spindle parameter list.

[#13130(PR)] SP130

Set the unique constants for the spindle motor. (High-speed coil)
The setting value is determined by the motor's mechanical and electrical characteristics and specifications, so normally set the value given in the spindle parameter list.

Not used. Set to "0".

bit D: rps Safety observation speed setting unit

0: Normal 1: 100°/min

bit C: sdt2 Specified speed output digital signal 2 output

0: Normal 1: Enable

bit B-0:

[#13230] SP230 SFNC10 Spindle function 10

Select the spindle functions. Functions are allocated to each bit Set this in hexadecimal format.

bit F-9:

Not used. Set to "0".

bit 8: nohis Communication error alarm(34,36,38,39) between NC and DRV Specific alarm history disabled

0: Enable 1: Disable

bit 7 : cse Spindle C axis command speed monitoring function

0: Normal setting (function disabled) 1: Function enabled It is not available for MDS-D-SPJ3 Series.

Not used. Set to "0".

[#13231] SP231

Not used. Set to "0".

【#13232】 SP232

Not used. Set to "0".

[#13233] SP233 IVC/lcx Voltage non-sensitive band compensation/Current bias cx

bit F-8:

Not used. Set to "0".

bit 7-0: IVC Voltage non-sensitive band compensation

When 100% is set, the voltage equivalent to the logical non-energized time will be

When "0" is set, 100% compensation will be performed.
Adjust in increments of 10% from the default value 100% If the value is too large, vibration or vibration noise may be generated.

---Setting range-0 to 255 (%)

[#13234] SP234 Icy/lb1 Current bias cy/Current bias b1

bit F-8: lb1 Current bias 1

Normally, set to "0". (For machine tool builder adjustment) When using this parameter, use this with SP233(lcx), SP234(lcy).

---Setting range-

0 to 255

bit 7-0 : Icy Current bias

Normally, set to "0". (For machine tool builder adjustment) When using this parameter, use this with SP233(lcx), SP234(lb1).

---Setting range-

0 to 255

[#13235(PR)] SP235 R2H Temperature compensation gain

Set the magnification in converting the thermistor temperature to the control compensation

When "0" is set, the temperature compensation function is disabled. When not using, or when using an IPM spindle motor, set to "0".

---Setting range

0 to 400 (%)

[#13236(PR)] SP236 WIH Temperature compensation time constant

Set the delay time constant from the thermistor temperature to the control compensation

When "0" is set, the delay time constant is disabled.
When not using, or when using an IPM spindle motor, set to "0".

---Setting range 0 to 150 (min)

[#13237(PR)] SP237 TCF Torque command filter

Set the filter for the torque command.
When not using, set to "0".
The standard value is "500" when using the motor side detector TS5690 or TS5691.

---Setting range-

0 to 4500 (Hz)

[#13238] SP238 SSCFEED Safety observation Safety speed

Set the safety speed at the spindle end for the safety observation function.

When not using, set to "0"

---Setting range-

0 to 18000 (° /min)

However, when SP229/bitD is set to "1", the setting range is from -32768 to 32767 (100 /min).

[#13239] SP239 SSCRPM Safety observation Safety motor speed

Set the motor's safety speed for the safety observation function. When not using, set to "0".

---Setting range-0 to 32767 (r/min)

【#13240(PR)】 SP240

Not used. Set to "0".

This is automatically set by the NC system.

6. Rotary Axis Configuration Parameters

The parameters with "(PR)" requires the CNC to be turned OFF after the settings. Turn the power OFF and ON to enable the parameter settings.

[#7900(PR)] RCDAX I Orthogonal coordinate horizontal axis name

Set the name of the horizontal axis in the orthogonal coordinate system.

---Setting range-A,B,C,U,V,W.X.Y.Z

[#7901(PR)] RCDAX_J Orthogonal coordinate vertical axis name

Set the name of the vertical axis in the orthogonal coordinate system.

A.B.C.U.V.W.X.Y.Z

[#7902(PR)] RCDAX_K Orthogonal coordinate height axis name

Set the name of the height axis in the orthogonal coordinate system.

---Setting range A.B.C.U.V.W.X.Y.Z

[#7903] G92_CRD Origin zero set coordinate selection

Select the coordinate to preset when issuing an origin zero command (G92X Y Z ;).

0: Tool center coordinate

1: Holder center coordinate

[#7904] NO_TIP Tool handle feed function selection

Select whether to enable the tool handle feed

0: Enable (tool handle feed)

1: Disable (standard)

[#7905] NO_ABS Selection of tool axis travel amount display at manual ABS switch ON/

Select how to update the display of tool axis travel amount.
0: Update at ABS switch OFF
1: Update at every ON and OFF of ABS switch

[#7906] PASSTYP Singular point passage type

Select the movement after passing a singular point.

0: Type 1
A/B axis rotation angle will be in the same sign direction as that when the tool center point control started

Type 2
 C axis rotation amount on the singular point will be smaller.

[#7907] CHK_ANG Near singular judgment angle

Set the angle for judging a position near the singular point.

---Setting range 0.000 to 5.000 (°)

[#7908] SLCT_PRG_COORD Programming coordinate system selection

Select the coordinate system for the programming coordinate

0: Table coordinate system (coordinate system that rotates together with workpiece)

Workpiece coordinate system

[#7909] IJK_VEC_MR Posture vector mirror image selection

Select whether to enable the mirror image on the posture vector (IJK) when Type 2 is selected in "#7906 PASSTYP"

0. Disable 1. Enable

[#7910] SLCT_INT_MODE Interpolation method selection

Select the interpolation method

Joint interpolation method
 Single axis rotation interpolation method

[#7911] SLCT_STANDARD_POS Rotary axis basic position selection

Select the basic position of the rotary axis

Workpiece coordinate zero point
 The position when the tool center point is commanded.

(Note) Even if the position is changed, it is not changed during tool center point control. It is changed when next tool center point control will be commanded.

[#7912] NO_MANUAL Selection of manual feed for 5-axis machining

Select whether to enable the manual feed for 5-axis machining.

0: Enable (manual feed for 5-axis machining)

Disable (standard manual feed)

Rotary Axis Configuration Parameters

[#7913] MCHN_SPEED_CTRL Machine speed fluctuation suppression

Select whether to suppress the machine speed fluctuation due to rotary axis movement.

0: Not suppress

1: Suppress

(Note)This parameter is disabled when SSS control is enabled.

[#7914] ROT_PREFILT Rotary axis prefilter time constant

Set the time constant for rotary axis prefilter

Setting this parameter can smoothen the tool angle change (rotary axis' motion) under tool

center point control.

When set to "0", "Rotary axis prefiltering" will be disabled.

---Setting range-0 to 200 (ms)

[#7915] SLCT_SLOPE_CRD_MOD Rotary axis basic position in inclined surface machini

Set the basic position of rotary axis to establish the feature coordinate system when inclined surface machining is commanded.

The position will not change when inclined surface machining is running. It will change when the next inclined surface machining is commanded.

0: At zero degree

1: At the start position

[#7920(PR)] SLCT_T1 Rotary axis selection

Select in which axis direction to rotate the tool rotating type base-side rotary axis.

If the tool axis is inclined, use the second digit to set the axis direction in which the tool axis

0: Invalid 1: I axis rotation

2: J axis rotation 3: K axis rotation

(Note) 0 to 99 can be set from the screen, but if an invalid value is set, the operation error "M01 0127 Rot axis parameter error" will occur when the power supply is turned ON.

---Setting range

0 to 3 12, 13, 21, 23, 31, 32

[#7921(PR)] TIANGT1 Inclination angle

Set the inclination angle if the tool-rotation type base-side rotary axis is inclined. Set the angle regarding CCW direction of the inclined plane as plus direction.

-Setting range

-359.999 to 359.999 (°)

(Follow as "#1003 iunit Input setup unit".)

[#7922(PR)] ROTAXT1 Rotary axis name

Set the name of the tool rotating type base-side rotary axis. Set "0" when the axis has the mechanical axis specifications. (The setting is, however,

invalid in the tool center point control.)

---Setting range 0, A, B, C, U, V, W, X, Y, Z

【#7923】 DIR_T1 Rotation direction

Select the rotation direction of the tool rotating type base-side rotary axis.

0: CW 1: CCW

[#7924] COFST1H Horizontal axis rotation center offset

Set the distance in the horizontal axis direction between the rotation centers of the tool-side rotary axis and the base-side rotary axis.

-Setting range

-99999.999 to 99999.999 (mm)

[#7925] COFST1V Vertical axis rotation center offset

Set the distance in the vertical axis direction between the rotation centers of the tool-side rotary axis and the base-side rotary axis.

---Setting range

-99999.999 to 99999.999 (mm)

[#7926] COFST1T Height axis rotation center offset

Set the distance in the height axis direction between the rotation centers of the tool-side rotary axis and the base-side rotary axis.

---Setting range-

-99999.999 to 99999.999 (mm)

[#7927] CERRT1H Horizontal axis rotation center error compensation amount

Set the error compensation amount in the horizontal axis direction of the tool rotating type base-side rotary axis rotation center.

-Setting range

-99999.999 to 99999.999 (mm)

(Follow as "#1006 mcmpunit Machine error compensation unit".)

Rotary Axis Configuration Parameters

[#7928] CERRT1V Vertical axis rotation center error compensation amount

Set the error compensation amount in the vertical axis direction of the tool rotating type base-side rotary axis rotation center.

--Setting range

-99999.999 to 99999.999 (mm)

(Follow as "#1006 mcmpunit Machine error compensation unit".)

[#7930(PR)] SLCT_T2 Rotary axis selection

Select in which axis direction to rotate the tool rotating type tool-side rotary axis.

If the tool axis is inclined, use the second digit to set the axis direction in which the tool axis is inclined.

0: Invalid

- 1: Laxis rotation
- 2: J axis rotation
- 3: K axis rotation

(Note) 0 to 99 can be set from the screen, but if an invalid value is set, the operation error "M01 0127 Rot axis parameter error" will occur when the power supply is turned ON.

---Setting range

0 to 3 12, 13, 21, 23, 31, 32

【#7931(PR)】 TIANGT2 Inclination angle

Set the inclination angle if the tool-rotation type tool-side rotary axis is inclined. Set the angle regarding CCW direction of the inclined plane as plus direction.

-Setting range

-359,999 to 359,999 (°)

(Follow as "#1003 iunit Input setup unit".)

[#7932(PR)] ROTAXT2 Rotary axis name

Set the name of the tool rotating type tool-side rotary axis.

Set "0" when the axis has the mechanical axis specifications. (The setting is, however,

invalid in the tool center point control.)

---Setting range 0, A, B, C, U, V, W, X, Y, Z

[#7933] DIR_T2 Rotation direction

Set the rotation direction of the tool rotating type tool-side rotary axis.

0: CW

1: CCW

[#7934] COFST2H Horizontal axis rotation center offset

Set the distance in the horizontal axis direction between the spindle holder center and the rotation center of the tool-side rotary axis.

--Setting range

-99999.999 to 99999.999 (mm)

[#7935] COFST2V Vertical axis rotation center offset

Set the distance in the vertical axis direction between the spindle holder center and the

rotation center of the tool-side rotary axis.

---Setting range -99999.999 to 99999.999 (mm)

[#7936] COFST2T Height axis rotation center offset

Set the distance in the height axis direction between the spindle holder center and the rotation center of the tool-side rotary axis.

-Setting range

-99999.999 to 99999.999 (mm)

[#7937] CERRT2H Horizontal axis rotation center error compensation amount

Set the error compensation amount in the horizontal axis direction of the tool rotating type

tool-side rotary axis rotation center. -Setting range

-99999.999 to 99999.999 (mm)

(Follow as "#1006 mcmpunit Machine error compensation unit".)

[#7938] CERRT2V Vertical axis rotation center error compensation amount

Set the error compensation amount in the vertical axis direction of the tool rotating type toolside rotary axis rotation center.

---Setting range

-99999.999 to 99999.999 (mm)

(Follow as "#1006 mcmpunit Machine error compensation unit".)

Rotary Axis Configuration Parameters

[#7940(PR)] SLCT_W1 Rotary axis selection

Select in which axis direction to rotate the table rotating type base-side rotary axis. If the tool axis is inclined, use the second digit to set the axis direction in which the tool axis is inclined

0: Invalid

1: I axis rotation 2: Lavis rotation

3: K axis rotation

(Note) 0 to 99 can be set from the screen, but if an invalid value is set, the operation error "M01 0127 Rot axis parameter error" will occur when the power supply is turned ON.

-Setting range 0 to 3

12, 13, 21, 23, 31, 32

[#7941(PR)] TIANGW1 Inclination angle

Set the inclination angle if the table-rotation type base-side rotary axis is inclined. Set the angle regarding CCW direction of the inclined plane as plus direction.

---Setting range

-359.999 to 359.999 (°)
(Follow as "#1003 junit Input setup unit".)

[#7942(PR)] ROTAXW1 Rotary axis name

Set the name of the table rotating type base-side rotary axis

Set "0" when the axis has the mechanical axis specifications. (The setting is, however, invalid in the tool center point control.)

---Setting range

0. A. B. C. U. V. W. X. Y. Z

[#7943] DIR W1 Rotation direction

Set the rotation direction for the table rotating type base-side rotary axis.

1: CCW

[#7944] COFSW1H Horizontal axis rotation center offset

When all axes are at the machine basic point, set the distance in the horizontal axis

direction from the machine basic point to the rotation center of the base-side rotary axis.

---Setting range

-99999.999 to 99999.999 (mm)

[#7945] COFSW1V Vertical axis rotation center offset

When all axes are at the machine basic point, set the distance in the vertical axis direction from the machine basic point to the rotation center of the base-side rotary axis.

---Setting range-

-99999.999 to 99999.999 (mm)

[#7946] COFSW1T Height axis rotation center offset

When all axes are at the machine basic point, set the distance in the height axis direction from the machine basic point to the rotation center of the base-side rotary axis.

---Setting range

-99999.999 to 99999.999 (mm)

[#7947] CERRW1H Horizontal axis rotation center error compensation amount

Set the error compensation amount in the horizontal axis direction of the table rotating type base-side rotary axis rotation center.

---Setting range

-9999.999 to 99999.999 (mm)
(Follow as "#1006 mcmpunit Machine error compensation unit".)

[#7948] CERRW1V Vertical axis rotation center error compensation amount

Set the error compensation amount in the vertical axis direction of the table rotating type base-side rotary axis rotation center.

--Setting range

-99999.999 to 99999.999 (mm)

(Follow as "#1006 mcmpunit Machine error compensation unit".)

[#7950(PR)] SLCT_W2 Rotary axis selection

Set in which direction to rotate the table rotating type workpiece-side rotary axis. If the tool axis is inclined, use the second digit to set the axis direction in which the tool axis

is inclined.

0: Invalid 1: I axis rotation

2: J axis rotation 3: K axis rotation

(Note) 0 to 99 can be set from the screen, but if an invalid value is set, the operation error "M01 0127 Rot axis parameter error" will occur when the power supply is turned ON.

--Setting range---

0 to 3

12, 13, 21, 23, 31, 32

Rotary Axis Configuration Parameters

[#7951(PR)] TIANGW2 Inclination angle

Set the inclination angle if the table rotating type workpiece-side rotary axis is inclined. Set the angle regarding CCW direction of the inclined plane as minus direction.

---Setting range

-359.999 to 359.999 (°)
(Follow as "#1003 junit Input setup unit".)

[#7952(PR)] ROTAXW2 Rotary axis name

Set the name of the table rotating type workpiece-side rotary axis. Set "0" when the axis has the mechanical axis specifications. (The setting is, however, invalid in the tool center point control.)

--Setting range 0, A, B, C, U, V, W, X, Y, Z

【#7953】 DIR W2 Rotation direction

Set the rotation direction for the table rotating type workpiece-side rotary axis.

0: CW 1: CCW

[#7954] COFSW2H Horizontal axis rotation center offset

When all axes are at the machine basic point, set the distance in the horizontal axis direction between rotation centers of the base-side rotary axis and the workpiece-side rotary axis.

---Setting range

-99999 999 to 99999 999 (mm)

[#7955] COFSW2V Vertical axis rotation center offset

When all axes are at the machine basic point, set the distance in the vertical axis direction between rotation centers of the base-side rotary axis and the workpiece-side rotary axis.

---Setting range-

-99999 999 to 99999 999 (mm)

[#7956] COFSW2T Height axis rotation center offset

When all axes are at the machine basic point, set the distance in the height axis direction between rotation centers of the base-side rotary axis and the workpiece-side rotary axis.

---Setting range

-99999.999 to 99999.999 (mm)

[#7957] CERRW2H Horizontal axis rotation center error compensation amount

Set the error compensation amount in the horizontal axis direction of the table rotating type workpiece-side rotary axis rotation center.

---Setting range

-99999.999 to 99999.999 (mm)

(Follow as "#1006 mcmpunit Machine error compensation unit".)

[#7958] CERRW2V Vertical axis rotation center error compensation amount

Set the error compensation amount in the vertical axis direction of the table rotating type workpiece-side rotary axis rotation center.

-Setting range

-99999.999 to 99999.999 (mm)

(Follow as "#1006 mcmpunit Machine error compensation unit".)

Machine Error Compensation Parameters

7. Machine Error Compensation Parameters

The parameters with "(PR)" requires the CNC to be turned OFF after the settings. Turn the power OFF and ON to enable the parameter settings.

[#4000(PR)] Pinc Machine error compensation increment method

Select the method to set the machine error compensation data

0. Absolute amount method

1: Incremental amount method

[#4001+10(n-1)] cmpax Basic axis <n-th axis>

Set a name of the basic axis for machine error compensation.

For pitch error compensation, set the name of the axis to be compensated.

(2) For relative position compensation, set the name of the axis to be the basic axis. Set "system No. + axis name" when using the multi-part system.

(Example) Z axis for 2nd part system: 2Z

When two or more same name exist, set "axis name + serial number".

The serial number is common to all systems. (Example) If C axis of the 1st system has 2 axes, and another C axis in the 2nd system has

1 axis, set the C axis of the 2nd system as "C3".

---Setting range-

Abbreviation as X. Y. Z. U. V. W. A. B. C. etc.

[#4002+10(n-1)] drcax Compensation axis <n-th axis>

Set a name of the compensation axis for machine error compensation.

(1) For pitch error compensation, set the same axis name as in "#4001 cmpax"

(1) For plant end compensation, set the same axis fame as it if #400 cmpax. (2) For relative position compensation, set the name of the axis to be actually compensated. Set "system No. + axis name" when using the multi-part system. (Example) 2 axis for 2nd part system: 22

When two or more same name exist, set "axis name + serial number".

The serial number is common to all systems.

(Example) If C axis of the 1st system has 2 axes, and another C axis in the 2nd system has 1 axis, set the C axis of the 2nd system as "C3".

---Setting range-

Abbreviation as X. Y. Z. U. V. W. A. B. C. etc.

[#4003+10(n-1)] rdvno Division point number at reference position <n-th axis>

Set the compensation data No. corresponding to the reference position. As the reference position is actually the base position, there is no compensation No. Therefore set the number that is decremented by 1.

(Note) When two-way pitch error compensation is enabled, set compensation data No. corresponding to reference point in shifting in plus direction.

---Setting range-

4101 to 5124

[#4004+10(n-1)] mdvno Division point number at the most negative side <n-th axis>

Set the compensation data No. at the farthest end on the negative side.

(Note) When the axis moves in positive direction with two-way pitch error compensation enabled, set compensation data No. of which locates on the nearest point to negative side. The compensation point should be set with even number

---Setting range

4101 to 5124

[#4005+10(n-1)] pdvno Division point number at the most positive side <n-th axis>

Set the compensation data No. at the farthest end on the positive side

(Note) When the axis moves in negative direction with two-way pitch error compensation enabled, set compensation data No. of which locates on the nearest point to positive side. The compensation point should be set with even number.

---Setting range-

4101 to 5124

[#4006+10(n-1)] sc Compensation scale factor <n-th axis>

Set the scale factor for the compensation amount.

---Setting range--

0 to 99

[#4007+10(n-1)] spcdv Division interval <n-th axis>

Set the interval to divide the basic axis

Each compensation data will be the compensation amount for each of these intervals.

---Setting range-

1 to 9999999 (control unit applied)

[#4008+10(n-1)] twopc Two-way pitch error compensation <n-th axis>

Select whether to enable two-way pitch error compensation.

0: Disable

1: Enable

Machine Error Compensation Parameters

[#4009+10(n-1)] refcmp Reference position compensation amount <n-th axis>

When two-way pitch error compensation is enabled, set the compensation amount of the reference position when the axis moves to the position from the opposite direction of the zero point return.

- ---Setting range---
 - -32768 to 32767
- (Note) The actual compensation amount will be the value obtained by multiplying the setting value with the compensation scale.

【#4101 - 5124】

Set the compensation amount for each axis.

- ---Setting range---
 - -32768 to 32767
- (Note) The actual compensation amount will be the value obtained by multiplying the setting value with the compensation scale.

8 PLC Constants

【#6401,6402 - 6495,6496】 R7800-Low,R7800-High - R7847-Low,R7847-High Bit selection

This is the bit type parameter used in the PLC program (ladder)

Even if the data is set in the R register that corresponds to the PLC side when this parameter is displayed, the screen will not change. Enter a different screen once, and then select this screen again

Some of the parameters following #6449 may be fixed according to the usage purpose. Refer to "Appendix1.21 Contents of bit selection parameters #6449 to #6496".

0: OFF
1: ON

【#6497,6498 - 6595,6596】 R7848-Low,R7848-High - R7897-Low,R7897-High Bit selection

This is the bit type parameter (expansion) used in the PLC program (ladder). Even if the data is set in the R register that corresponds to the PLC side when this parameter is displayed, the screen will not change. Enter a different screen once, and then select this screen again.

0 : OFF 1 : ON

[#16000 - 16703] T0 - T703 PLC timer <10ms/100ms>

Set the time for the timer used in the PLC program (ladder).

The 10ms timer and 100ms timer are identified by the command used.

(Note1) This setting value is valid when bit selection parameter "#6449/bit0" is set to "0".

(Note2) Setting the timer setting value from the setting and display unit

The timer T setting value can be set with the following two methods. - Method to validate the setting value (Kn) programmed with the sequence program

Method to validate the setting value set from the setting and display unit (variable

timer) (Note3) As described bellow, the setting method of timer T and No. of points can be set with the bit selection parameters (#6454/bit0 to bit3).

- #6454/bit0=0, bit1=0, bit2=0, bit3=0

No. of points: 0 Range: None

Setting method: All fixed timers

- #6454/bit0=1, bit1=0, bit2=0, bit3=0 No. of points: 100

Range: #16000 to #16099

Setting method: Set above range with variable timers. #6454/bit0=0, bit1=1, bit2=0, bit3=0

No. of points:200

Range: #16000 to #16199

Setting method: Set above range with variable timers.

- #6454/bit0=1, bit1=1, bit2=0, bit3=0

No. of points: 300

Range: #16000 to #16299

Setting method: Set above range with variable timers. - #6454/bit0=0, bit1=0, bit2=1, bit3=0 No. of points: 400

Range: #16000 to #16399

Setting method: Set above range with variable timers. -#6454/bit0=1, bit1=0, bit2=1, bit3=0
No. of points: 500

Range: #16000 to #16499

Setting method: Set above range with variable timers. -#6454/bit0=0, bit1=1, bit2=1, bit3=0

No. of points: 600

Setting method: Set above range with variable timers.

Range: #16000 to #16599

#6454/bit0=1, bit1=1, bit2=1, bit3=0
 No. of points: All points

Range: #16000 to #16703

Setting method: All variable timers

---Setting range

0 to 32767(x 10ms or x 100ms)

PLC Constants

[#17000 - 17063] ST0 - ST63 PLC integrated timer <100ms INC.>

Set the time for the integrated timer used with the PLC program (ladder).

(Note1) This setting value is valid when bit selection parameter "#6449/bit0" is set to "0".

(Note2) Setting the timer setting value from the setting and display unit

The timer T setting value can be set with the following two methods

- Method to validate the setting value (Kn) programmed with the sequence program
- (fixed integrated timer)

 Method to validate the setting value set from the setting and display unit (variable
- integrated timer
- (Note3) As described bellow, the setting method of timer ST and No. of points can be set with the bit selection parameters (#6453/bit5 to bit7). -#6453/bit5-0, bit7=0

No. of points: 0

Range: None Range: None Setting method: All fixed integrated timers #6453/bit5=1, bit6=0, bit7=0 No. of points: 20

Range: #17000 to #17019

Setting method: Set above range with variable integrated timer.

- #6453/bit5=0, bit6=1, bit7=0

No. of points: 40

Range: #17000 to #17039

Setting method: Set above range with variable integrated timer.

-#6453/bit5=1, bit6=1, bit7=0

No. of points: All points

Range: #17000 to #17063

Setting method: All variable integrated timers

---Setting range

0 to 32767(x 100ms)

[#17200 - 17455] C000 - C255 Counter

Set the time for the counter used with the PLC program (ladder).

(Note1) This setting value is valid when bit selection parameter "#6449/bit1" is set to "0".

(Note2) Setting the counter setting value from the setting and display unit The counter C setting value can be set with the following two methods

 Method to validate the setting value (Kn) programmed with the sequence program (fixed counter)

- Method to validate the setting value set from the setting and display unit (variable counter)

(Note3) As described bellow, the setting method of counter C and No. of points can be set with the bit selection parameters (#6454/bit4 to bit7).

- #6454/bit4=0, bit5=0, bit6=0, bit7=0

No. of points: 0

Range: None

Setting method: All fixed counters

- #6454/bit4=1, bit5=0, bit6=0, bit7=0 No. of points: 40

Range: #17200 to #17239

Setting method: Set above range with variable counter.

- #6454/bit4=0, bit5=1, bit6=0, bit7=0

No. of points: 80

Range: #17200 to #17279 Setting method: Set above range with variable counter.

*#6454/bit4=1, bit5=1, bit6=0, bit7=0 No. of points: 120

Range: #17200 to #17319

Setting method: Set above range with variable counter. - #6454/bit4=0, bit5=0, bit6=1, bit7=0 No. of points: 160

Range: #17200 to #17359

Setting method: Set above range with variable counter.
-#6454/bit4=1, bit5=0, bit6=1, bit7=0
No. of points: 200

Range: #17200 to #17399

Setting method: Set above range with variable counter.
-#6454/bit4=0, bit5=1, bit6=1, bit7=0
No. of points: 240

Range: #17200 to #17439

Setting method: Set above range with variable counter. - #6454/bit4=1, bit5=1, bit6=1, bit7=0

No. of points: All points

Range: #17200 to #17455

Setting method: All variable counters

---Setting range

0 to 32767

【#18001 - 18150】 R7500,7501 - R7798,7799 PLC constant (Base area)

Set the value to be set in the data type R register used in the PLC program (ladder). Even if the data is set in the R register that corresponds to the PLC side when this parameter is displayed. The screen will not change. Enter a different screen once, and then select this screen again

---Setting range-

-99999999 to 99999999

II Parameters PLC Constants

[#18151-18900] R8300,8301 - R9798,9799 PLC constant (Extension area)

Set the value to be set in the data type R register(R8300 to R9799) used in the PLC

Set the value to be set in the data type R register(R8300 to R9799) used in the PLC program (ladder).

Even if the data is set in the R register that corresponds to the PLC side when this parameter is displayed, the screen will not change. Enter a different screen once, and then select this screen again.

#18151 to #18900 is used as the PLC constant extended area.

The area is valid for the number of PLC constant extension points ("#1326 PLC Const Ext. Num" setting value), starting with #18151.

---Setting range -99999999 to 99999999

【#7001】 M[01] Code

Set the M code used for calling out the macro with the M command. This is valid when "#1195 Mmac" is set to "1".

---Setting range 1 to 9999

【#7002】 M[01] Type

Set the macro call out type.

```
0: M98 P △△△△ : and equivalent value call
1: G65 P △△△△; and equivalent value call
2: G66 P △△△△ ; and equivalent value call
```

3: G66.1 P $\triangle\triangle\triangle\triangle$; and equivalent value call others: M98 P $\triangle\triangle\triangle\triangle$; and equivalent value call

[#7003] M[01] Program No.

Set the No. of the program or file name to be called out. The file name can contain up to 32 characters

---Setting range-

Program name or file name (up to 32 characters)

【#7011】 M[02] Code

Set the M code used for calling out the macro with the M command. This is valid when "#1195 Mmac" is set to "1"

---Setting range 1 to 9999

【#7012】 M[02] Type

Set the macro call out type.

```
0: M98 P △△△△ : and equivalent value call
1: G65 P △△△△ ; and equivalent value call
2: G66 P △△△△; and equivalent value call
3: G66.1 P △△△△; and equivalent value call
others: M98 P △△△△ ; and equivalent value call
```

【#7013】 M[02] Program No.

Set the No. of the program or file name to be called out. The file name can contain up to 32 characters

-Setting range

Program name or file name (up to 32 characters)

[#7021] M[03] Code

Set the M code used for calling out the macro with the M command. This is valid when "#1195 Mmac" is set to "1".

---Setting range 1 to 9999

[#7022] M[03] Type

Set the macro call out type.

```
0: M98 P △△△△; and equivalent value call
1: G65 P △△△△; and equivalent value call
2: G66 P △△△△ ; and equivalent value call
3: G66.1 P \triangle\triangle\triangle\triangle; and equivalent value call others: M98 P \triangle\triangle\triangle\triangle; and equivalent value call
```

[#7023] M[03] Program No.

Set the No. of the program or file name to be called out. The file name can contain up to 32 characters

---Setting range

Program name or file name (up to 32 characters)

[#7031] M[04] Code

Set the M code used for calling out the macro with the M command. This is valid when "#1195 Mmac" is set to "1".

---Setting range-

1 to 9999

[#7032] M[04] Type

Set the macro call out type.

```
0: M98 P △△△△; and equivalent value call
1: G65 P △△△△; and equivalent value call
2: G66 P \( \triangle \tri
3: G66.1 P △△△△; and equivalent value call
others: M98 P △△△△; and equivalent value call
```

[#7033] M[04] Program No.

Set the No, of the program or file name to be called out. The file name can contain up to 32

---Setting range

Program name or file name (up to 32 characters)

【#7041】 M[05] Code

Set the M code used for calling out the macro with the M command. This is valid when "#1195 Mmac" is set to "1".

---Setting range-1 to 9999

[#7042] M[05] Type

Set the macro call out type

0: M98 P △△△△; and equivalent value call

1: G65 P △△△△ ; and equivalent value call 2: G66 P △△△△ ; and equivalent value call

3: G66.1 P △△△△; and equivalent value call

others: M98 P AAAA; and equivalent value call

[#7043] M[05] Program No.

Set the No. of the program or file name to be called out. The file name can contain up to 32 characters

---Setting range-

Program name or file name (up to 32 characters)

[#7051] M[06] Code

Set the M code used for calling out the macro with the M command. This is valid when "#1195 Mmac" is set to "1".

---Setting range-

1 to 9999

【#7052】 M[06] Type

Set the macro call out type.

0: M98 P $\triangle\triangle\triangle\triangle$; and equivalent value call

1: G65 P $\triangle\triangle\triangle\triangle$; and equivalent value call 2: G66 P $\triangle\triangle\triangle\triangle$; and equivalent value call

3: G66.1 P △△△△; and equivalent value call others: M98 P △△△△; and equivalent value call

【#7053】 M[06] Program No.

Set the No. of the program or file name to be called out. The file name can contain up to 32 characters

---Setting range-

Program name or file name (up to 32 characters)

[#7061] M[07] Code

Set the M code used for calling out the macro with the M command. This is valid when "#1195 Mmac" is set to "1".

---Setting range

1 to 9999

[#7062] M[07] Type

Set the macro call out type.

0: M98 P $\triangle\triangle\triangle\triangle$; and equivalent value call

1: G65 P △△△△ ; and equivalent value call 2: G66 P △△△△ ; and equivalent value call

3: G66.1 P △△△△ ; and equivalent value call others: M98 P △△△△ ; and equivalent value call

【#7063】 M[07] Program No.

Set the No. of the program or file name to be called out. The file name can contain up to 32 characters

---Setting range-

Program name or file name (up to 32 characters)

【#7071】 M[08] Code

Set the M code used for calling out the macro with the M command. This is valid when "#1195 Mmac" is set to "1".

---Setting range---

1 to 9999

[#7072] M[08] Type

Set the macro call out type.

0: M98 P △△△△; and equivalent value call

1: G65 P \(\triangle \tri

3: G66.1 P △△△△ ; and equivalent value call others: M98 P AAAA; and equivalent value call

【#7073】 M[08] Program No.

Set the No, of the program or file name to be called out. The file name can contain up to 32 characters

---Setting range

Program name or file name (up to 32 characters)

【#7081】 M[09] Code

Set the M code used for calling out the macro with the M command.

This is valid when "#1195 Mmac" is set to "1"

---Setting range

1 to 9999

【#7082】 M[09] Type

Set the macro call out type.

0: M98 P △△△△; and equivalent value call

1: G65 P △△△△ ; and equivalent value call 2: G66 P △△△△ ; and equivalent value call

3: G66.1 P $\triangle\triangle\triangle$; and equivalent value call others: M98 P $\triangle\triangle\triangle$; and equivalent value call

[#7083] M[09] Program No.

Set the No. of the program or file name to be called out. The file name can contain up to 32 characters

---Setting range-

Program name or file name (up to 32 characters)

【#7091】 M[10] Code

Set the M code used for calling out the macro with the M command. This is valid when "#1195 Mmac" is set to "1".

---Setting range-1 to 9999

【#7092】 M[10] Type

Set the macro call out type.

0: M98 P △△△△; and equivalent value call

1. G65 P \triangle A \triangle ; and equivalent value call 2: G66 P \triangle A \triangle ; and equivalent value call 3: G66.1 P \triangle A \triangle ; and equivalent value call others: M98 P \triangle A \triangle ; and equivalent value call

[#7093] M[10] Program No.

Set the No. of the program or file name to be called out. The file name can contain up to 32 characters

---Setting range-

Program name or file name (up to 32 characters)

【#7102】 M2mac Type

Set the type for when calling out the macro with the 2nd miscellaneous command.

The macro will be called out with the "#1170 M2name" address command when "#1198 M2mac" is set to "1

0: M98 P $\triangle\triangle\triangle\triangle$; and equivalent value call

1: G65 P △△△△; and equivalent value call

2: G66 P △△△△ ; and equivalent value call

3: G66.1 P △△△△ ; and equivalent value call others: M98 P AAAA; and equivalent value call

[#7103] M2mac Program No.

Set the program No. for when calling out the macro with the 2nd miscellaneous command. The macro will be called out with the "#1170 M2name" address command when "#1198 M2mac" is set to "1"

Set the No. of the program or file name to be called out. The file name can contain up to 32 characters

---Setting range

Program name or file name (up to 32 characters)

【#7201】 G[01] Code

Set the G code to be used when calling the macro with a G command.

Do not set a G code used in the system

---Setting range

1 to 999

[#7202] G[01] Type

Set the macro call out type.

0: M98 P △△△△; and equivalent value call

1: G65 P $\triangle\triangle\triangle\triangle$; and equivalent value call 2: G66 P $\triangle\triangle\triangle\triangle$; and equivalent value call

3: G66.1 P △△△△ ; and equivalent value call others: M98 P AAAA; and equivalent value call

[#7203] G[01] Program No.

Set the No, of the program or file name to be called out. The file name can contain up to 32 characters

---Setting range

Program name or file name (up to 32 characters)

【#7211】 G[02] Code

Set the G code to be used when calling the macro with a G command.

Do not set a G code used in the system.

---Setting range

1 to 999

【#7212】 G[02] Type

Set the macro call out type.

0: M98 P △△△△; and equivalent value call

1: G65 P \(\triangle \tri

3: G66.1 P $\triangle\triangle\triangle$; and equivalent value call others: M98 P $\triangle\triangle\triangle$; and equivalent value call

[#7213] G[02] Program No.

Set the No. of the program or file name to be called out. The file name can contain up to 32 characters

---Setting range-

Program name or file name (up to 32 characters)

【#7221】 G[03] Code

Set the G code to be used when calling the macro with a G command.

Do not set a G code used in the system

---Setting range-

1 to 999

【#7222】 G[03] Type

Set the macro call out type.

0: M98 P △△△△; and equivalent value call

1: G65 P △△△ ; and equivalent value call 2: G66 P △△△ ; and equivalent value call 3: G66.1 P △△△ ; and equivalent value call others: M98 P △△△ ; and equivalent value call

[#7223] G[03] Program No.

Set the No. of the program or file name to be called out. The file name can contain up to 32 characters

---Setting range-

Program name or file name (up to 32 characters)

【#7231】 G[04] Code

Set the G code to be used when calling the macro with a G command.

Do not set a G code used in the system.

---Setting range

1 to 999

【#7232】 G[04] Type

Set the macro call out type.

0: M98 P $\triangle\triangle\triangle\triangle$; and equivalent value call

0. M98 F \triangle \triangle A , and equivalent value call 1: G65 P \triangle A \triangle ; and equivalent value call 2: G66 P \triangle A \triangle A ; and equivalent value call 3: G66.1 P \triangle A \triangle A ; and equivalent value call others: M98 P \triangle A \triangle A ; and equivalent value call

【#7233】 G[04] Program No.

Set the No. of the program or file name to be called out. The file name can contain up to 32 characters

---Setting range-

Program name or file name (up to 32 characters)

[#7241] G[05] Code

Set the G code to be used when calling the macro with a G command.

Do not set a G code used in the system

---Setting range

1 to 999

【#7242】 G[05] Type

Set the macro call out type.

0: M98 P △△△△; and equivalent value call

1: G65 P △△△△ ; and equivalent value call 2: G66 P △△△△ ; and equivalent value call

3: G66.1 P △△△△ ; and equivalent value call others: M98 P \times \t

【#7243】 G[05] Program No.

Set the No, of the program or file name to be called out. The file name can contain up to 32

---Setting range

Program name or file name (up to 32 characters)

【#7251】 G[06] Code

Set the G code to be used when calling the macro with a G command.

Do not set a G code used in the system

---Setting range-

1 to 999

[#7252] G[06] Type

Set the macro call out type.

0: M98 P △△△△; and equivalent value call

1: G65 P \(\triangle \tri

3: G66.1 P △△△△ ; and equivalent value call others: M98 P $\triangle\triangle\triangle$; and equivalent value call

【#7253】 G[06] Program No.

Set the No. of the program or file name to be called out. The file name can contain up to 32 characters

---Setting range-

Program name or file name (up to 32 characters)

【#7261】 G[07] Code

【#7262】 G[07] Type

Set the G code to be used when calling the macro with a G command.

Do not set a G code used in the system

---Setting range 1 to 999

Set the macro call out type.

0: M98 P $\triangle\triangle\triangle\triangle$; and equivalent value call

1: G65 P $\triangle\triangle\triangle$; and equivalent value call 2: G66 P $\triangle\triangle\triangle\triangle$; and equivalent value call

3: G66.1 P $\triangle\triangle\triangle$; and equivalent value call others: M98 P $\triangle\triangle\triangle$; and equivalent value call

【#7263】 G[07] Program No.

Set the No. of the program or file name to be called out. The file name can contain up to 32 characters

---Setting range-

Program name or file name (up to 32 characters)

【#7271】 G[08] Code

Set the G code to be used when calling the macro with a G command.

Do not set a G code used in the system

---Setting range

1 to 999

【#7272】 G[08] Type

Set the macro call out type.

0: M98 P $\triangle\triangle\triangle\triangle$; and equivalent value call

1: G65 P $\triangle\triangle\triangle\triangle$; and equivalent value call 2: G66 P $\triangle\triangle\triangle\triangle$; and equivalent value call

3: G66.1 P $\triangle\triangle\triangle\triangle$; and equivalent value call others: M98 P $\triangle\triangle\triangle\triangle$; and equivalent value call

[#7273] G[08] Program No.

Set the No, of the program or file name to be called out. The file name can contain up to 32

---Setting range

Program name or file name (up to 32 characters)

【#7281】 G[09] Code

Set the G code to be used when calling the macro with a G command.

Do not set a G code used in the system.

---Setting range

1 to 999

【#7282】 G[09] Type Set the macro call out type

```
0: M98 P △△△△; and equivalent value call
```

1: G65 P △△△△ ; and equivalent value call 2: G66 P △△△△ ; and equivalent value call

3: G66.1 P △△△△; and equivalent value call others: M98 P AAAA; and equivalent value call

[#7283] G[09] Program No.

Set the No. of the program or file name to be called out. The file name can contain up to 32 characters

---Setting range-

Program name or file name (up to 32 characters)

【#7291】 G[10] Code

Set the G code to be used when calling the macro with a G command.

Do not set a G code used in the system

---Setting range

1 to 999

【#7292】 G[10] Type

Set the macro call out type.

0: M98 P $\triangle\triangle\triangle\triangle$; and equivalent value call

1: G65 P \(\triangle \tri

3: G66.1 P △△△△; and equivalent value call others: M98 P \(\triangle \triangle

【#7293】 G[10] Program No.

Set the No. of the program or file name to be called out. The file name can contain up to 32 characters

---Setting range-

Program name or file name (up to 32 characters)

[#7302] Smac Type

Set the type for when calling the macro with an S command. This is valid when "#1196 Smac" is set to "1".

0: M98 P △△△△ : and equivalent value call

1: G65 P △△△△; and equivalent value call 2: G66 P △△△△ ; and equivalent value call

3: G66.1 P △△△△; and equivalent value call

others: M98 P △△△△ ; and equivalent value call

[#7303] Smac Program No.

Set the program No. for when calling the macro with an S command. This is valid when "#1196 Smac" is set to "1".

Set the No. of the program or file name to be called out. The file name can contain up to 32 characters

---Setting range-

Program name or file name (up to 32 characters)

【#7312】 Tmac Type

Set the type for when calling the macro with a T command. This is valid when "#1197 Tmac" is set to "1".

0: M98 P △△△△; and equivalent value call

1: G65 P △△△△; and equivalent value call 2: G66 P △△△△ ; and equivalent value call

3: G66.1 P △△△△; and equivalent value call others: M98 P \triangle \t

[#7313] Tmac Program No.

Set the program No. for when calling the macro with a T command.

This is valid when "#1197 Tmac" is set to "1".

Set the No. of the program or file name to be called out. The file name can contain up to 32 characters.

---Setting range-

Program name or file name (up to 32 characters)

[#7401] ASCII[01] Valid

The ASCII code macro parameters (#7402 to 7405) are validated.

0: Invalid 1: Valid

[#7402] ASCII[01] Code

Set the ASCII code used to call macros with the ASCII code. L system: A,B,D,F,H,I,J,K,M,Q,R,S,T

M system: A,B,F,H,I,K,M,Q,R,S,T

[#7403] ASCII[01] Type

Set the macro call type. 0: M98

1: G65 2: G66

3: G66.1

[#7404] ASCII[01] Program No.

Set the program No. called with macro call.

---Setting range---

Program name or file name (up to 32 characters)

[#7405] ASCII[01] Variable

When the call type is "0", set the variable No. set after the ASCII code.

---Setting range-

100 to 149

[#7411] ASCII[02] Valid

The ASCII code macro parameters (#7412 to 7415) are validated.

0: Invalid 1: Valid

[#7412] ASCII[02] Code

Set the ASCII code used to call macros with the ASCII code. L system: A,B,D,F,H,I,J,K,M,Q,R,S,T M system: A,B,F,H,I,K,M,Q,R,S,T

[#7413] ASCII[02] Type

Set the macro call type.

0: M98 1: G65

2: G66

3: G66.1

[#7414] ASCII[02] Program No.

Set the program No. called with macro call.

---Setting range-

Program name or file name (up to 32 characters)

【#7415】 ASCII[02] Variable

When the call type is "0", set the variable No. set after the ASCII code.

---Setting range

100 to 149

10 Position Switches

【#7500】 Pcheck High-speed switching of position switch

Specify whether to perform position switch area checking at high speeds.

- 0: Do not perform position switch area checking at high speed (do it the same as hefore)
 - Perform position switch area checking at high speed.

[#7501] PSW1 axis Axis name

Specify the name of the axis for which a position switch is provided.

---Setting range

X, Y, Z, U, V, W, A, B, or C axis address

[#7502] PSW1 dog1 Imaginary dog position 1

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC.

1st part system device: X1D00

2nd part system device: X1D20

---Setting range -99999,999 to 99999,999 (mm)

[#7503] PSW1 dog2 Imaginary dog position 2

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC

1st part system device: X1D00

2nd part system device: X1D20

---Setting range--99999.999 to 99999.999 (mm)

[#7504] PSW1 check Selection of area check method

When position switch area checking at high speed is selected, specify the mode of area checking, i.e., whether to use the command type machine position or detector feedback position, for each position switch point.

- 0: Use the command type machine position as the machine position for position switch area checking.
- 1: Use the detector feedback position as the machine position for position switch area checking.

(Note) This parameter is valid only when "1" set in "#7500 Pcheck".

[#7511] PSW2 axis Axis name

Specify the name of the axis for which a position switch is provided.

---Setting range

X, Y, Z, U, V, W, A, B, or C axis address

【#7512】 PSW2 dog1 Imaginary dog position 1

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC

1st part system device: X1D01

2nd part system device: X1D21

---Setting range

-99999.999 to 99999.999 (mm)

[#7513] PSW2 dog2 Imaginary dog position 2

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC.

1st part system device: X1D01

2nd part system device: X1D21

---Setting range

-99999.999 to 99999.999 (mm)

[#7514] PSW2 check Selection of area check method

When position switch area checking at high speed is selected, specify the mode of area checking, i.e., whether to use the command type machine position or detector feedback position, for each position switch point.

- 0: Use the command type machine position as the machine position for position switch area checking
- Use the detector feedback position as the machine position for position switch area checking

(Note) This parameter is valid only when "1" set in "#7500 Pcheck".

[#7521] PSW3 axis Axis name

Specify the name of the axis for which a position switch is provided.

---Setting range

X, Y, Z, U, V, W, A, B, or C axis address

[#7522] PSW3 dog1 Imaginary dog position 1

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC.

1st part system device: X1D02

2nd part system device: X1D22

-Setting range

-99999.999 to 99999.999 (mm)

[#7523] PSW3 dog2 Imaginary dog position 2

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC

1st part system device: X1D02 2nd part system device: X1D22

---Setting range-

-99999.999 to 99999.999 (mm)

[#7524] PSW3 check Selection of area check method

When position switch area checking at high speed is selected, specify the mode of area checking, i.e., whether to use the command type machine position or detector feedback position, for each position switch point.

0: Use the command type machine position as the machine position for position switch area checking

 Use the detector feedback position as the machine position for position switch area checking.

(Note) This parameter is valid only when "1" set in "#7500 Pcheck".

[#7531] PSW4 axis Axis name

Specify the name of the axis for which a position switch is provided

--Setting range

X. Y. Z. U. V. W. A. B. or C axis address

[#7532] PSW4 dog1 Imaginary dog position 1 When the machine enters the range between imaginary dog positions 1 and 2, a signal is

output to the PLC.

1st part system device: X1D03

2nd part system device: X1D23

---Setting range

-99999.999 to 99999.999 (mm)

[#7533] PSW4 dog2 Imaginary dog position 2

When the machine enters the range between imaginary dog positions 1 and 2, a signal is

output to the PLC 1st part system device: X1D03

2nd part system device: X1D23

---Setting range-

-99999 999 to 99999 999 (mm)

[#7534] PSW4 check Selection of area check method

When position switch area checking at high speed is selected, specify the mode of area checking, i.e., whether to use the command type machine position or detector feedback position, for each position switch point.

0: Use the command type machine position as the machine position for position switch area checking. 1: Use the detector feedback position as the machine position for position switch area

checking.

(Note) This parameter is valid only when "1" set in "#7500 Pcheck".

[#7541] PSW5 axis Axis name

Specify the name of the axis for which a position switch is provided.

---Setting range

X, Y, Z, U, V, W, A, B, or C axis address

[#7542] PSW5 dog1 Imaginary dog position 1

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC

1st part system device: X1D04

2nd part system device: X1D24

---Setting range

-99999.999 to 99999.999 (mm)

[#7543] PSW5 dog2 Imaginary dog position 2

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC.

1st part system device: X1D04

2nd part system device: X1D24

---Setting range

-99999.999 to 99999.999 (mm)

[#7544] PSW5 check Selection of area check method

When position switch area checking at high speed is selected, specify the mode of area checking, i.e., whether to use the command type machine position or detector feedback position, for each position switch point.

- Use the command type machine position as the machine position for position switch area checking.
- Use the detector feedback position as the machine position for position switch area checking.

(Note) This parameter is valid only when "1" set in "#7500 Pcheck".

[#7551] PSW6 axis Axis name

Specify the name of the axis for which a position switch is provided.

---Setting range

X, Y, Z, U, V, W, A, B, or C axis address

[#7552] PSW6 dog1 Imaginary dog position 1

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC.

1st part system device: X1D05

2nd part system device: X1D25

---Setting range--

-99999.999 to 99999.999 (mm)

[#7553] PSW6 dog2 Imaginary dog position 2

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC.

1st part system device: X1D05

2nd part system device: X1D25

---Setting range---

-99999.999 to 99999.999 (mm)

[#7554] PSW6 check Selection of area check method

When position switch area checking at high speed is selected, specify the mode of area checking, i.e., whether to use the command type machine position or detector feedback position, for each position switch point.

- Use the command type machine position as the machine position for position switch area checking.
- Use the detector feedback position as the machine position for position switch area checking.

(Note) This parameter is valid only when "1" set in "#7500 Pcheck".

[#7561] PSW7 axis Axis name

Specify the name of the axis for which a position switch is provided.

---Setting range--

X, Y, Z, U, V, W, A, B, or C axis address

【#7562】 PSW7 dog1 Imaginary dog position 1

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC.

1st part system device: X1D06

2nd part system device: X1D26

---Setting range---

-99999.999 to 99999.999 (mm)

【#7563】 PSW7 dog2 Imaginary dog position 2

When the machine enters the range between imaginary dog positions 1 and 2, a signal is

output to the PLC. 1st part system device: X1D06

2nd part system device: X1D06

---Setting range---

-99999.999 to 99999.999 (mm)

[#7564] PSW7 check Selection of area check method

When position switch area checking at high speed is selected, specify the mode of area checking, i.e., whether to use the command type machine position or detector feedback position, for each position switch point.

- Use the command type machine position as the machine position for position switch area checking.
 - Use the detector feedback position as the machine position for position switch area checking.

(Note) This parameter is valid only when "1" set in "#7500 Pcheck".

[#7571] PSW8 axis Axis name

Specify the name of the axis for which a position switch is provided.

---Setting range--

X, Y, Z, U, V, W, A, B, or C axis address

[#7572] PSW8 dog1 Imaginary dog position 1

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC.

1st part system device: X1D07

2nd part system device: X1D27

-Setting range

-99999.999 to 99999.999 (mm)

[#7573] PSW8 dog2 Imaginary dog position 2

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC

1st part system device: X1D07

2nd part system device: X1D27

---Setting range--99999.999 to 99999.999 (mm)

[#7574] PSW8 check Selection of area check method

When position switch area checking at high speed is selected, specify the mode of area checking, i.e., whether to use the command type machine position or detector feedback position, for each position switch point.

0: Use the command type machine position as the machine position for position switch area checking

 Use the detector feedback position as the machine position for position switch area checking.

(Note) This parameter is valid only when "1" set in "#7500 Pcheck".

[#7581] PSW9 axis Axis name

Specify the name of the axis for which a position switch is provided

--Setting range

X. Y. Z. U. V. W. A. B. or C axis address

[#7582] PSW9 dog1 Imaginary dog position 1 When the machine enters the range between imaginary dog positions 1 and 2, a signal is

output to the PLC.

1st part system device: X1D08 2nd part system device: X1D28

---Setting range -99999.999 to 99999.999 (mm)

[#7583] PSW9 dog2 Imaginary dog position 2

When the machine enters the range between imaginary dog positions 1 and 2, a signal is

output to the PLC

1st part system device: X1D08 2nd part system device: X1D28

---Setting range-

-99999 999 to 99999 999 (mm)

[#7584] PSW9 check Selection of area check method

When position switch area checking at high speed is selected, specify the mode of area checking, i.e., whether to use the command type machine position or detector feedback position, for each position switch point.

0: Use the command type machine position as the machine position for position switch area checking. 1: Use the detector feedback position as the machine position for position switch area

checking.

(Note) This parameter is valid only when "1" set in "#7500 Pcheck".

[#7591] PSW10 axis Axis name

Specify the name of the axis for which a position switch is provided.

---Setting range

X, Y, Z, U, V, W, A, B, or C axis address

[#7592] PSW10 dog1 Imaginary dog position 1

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC

1st part system device: X1D09

2nd part system device: X1D29

---Setting range

-99999.999 to 99999.999 (mm)

[#7593] PSW10 dog2 Imaginary dog position 2

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC.

1st part system device: X1D09

2nd part system device: X1D29

---Setting range

-99999.999 to 99999.999 (mm)

[#7594] PSW10 check Selection of area check method

When position switch area checking at high speed is selected, specify the mode of area checking, i.e., whether to use the command type machine position or detector feedback position, for each position switch point.

- Use the command type machine position as the machine position for position switch area checking.
- Use the detector feedback position as the machine position for position switch area checking.

(Note) This parameter is valid only when "1" set in "#7500 Pcheck".

[#7601] PSW11 axis Axis name

Specify the name of the axis for which a position switch is provided.

---Setting range

X, Y, Z, U, V, W, A, B, or C axis address

A, 1, 2, 0, v, vv, A, L

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC.

[#7602] PSW11 dog1 Imaginary dog position 1

When the machine enters the range between output to the PLC.

1st part system (device: X1D0A)

2nd part system device: X1D2A

---Setting range-

-99999.999 to 99999.999 (mm)

[#7603] PSW11 dog2 Imaginary dog position 2

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC.

1st part system device: X1D0A

2nd part system device: X1D2A

---Setting range---

-99999.999 to 99999.999 (mm)

[#7604] PSW11 check Selection of area check method

When position switch area checking at high speed is selected, specify the mode of area checking, i.e., whether to use the command type machine position or detector feedback position, for each position switch point.

- Use the command type machine position as the machine position for position switch area checking.
- Use the detector feedback position as the machine position for position switch area checking.

(Note) This parameter is valid only when "1" set in "#7500 Pcheck".

[#7611] PSW12 axis Axis name

Specify the name of the axis for which a position switch is provided.

---Setting range--

X, Y, Z, U, V, W, A, B, or C axis address

[#7612] PSW12 dog1 Imaginary dog position 1

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC.

1st part system device: X1D0B

2nd part system device: X1D2B

---Setting range---

-99999.999 to 99999.999 (mm)

[#7613] PSW12 dog2 Imaginary dog position 2

When the machine enters the range between imaginary dog positions 1 and 2, a signal is

output to the PLC. 1st part system device: X1D0B

2nd part system device: X1D0B

---Setting range---

-99999.999 to 99999.999 (mm)

[#7614] PSW12 check Selection of area check method

When position switch area checking at high speed is selected, specify the mode of area checking, i.e., whether to use the command type machine position or detector feedback position, for each position switch point.

- Use the command type machine position as the machine position for position switch area checking.
- Use the detector feedback position as the machine position for position switch area checking.

(Note) This parameter is valid only when "1" set in "#7500 Pcheck".

[#7621] PSW13 axis Axis name

Specify the name of the axis for which a position switch is provided.

---Setting range---

X, Y, Z, U, V, W, A, B, or C axis address

[#7622] PSW13 dog1 Imaginary dog position 1

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC.

1st part system device: X1D0C 2nd part system device: X1D2C

---Setting range---

-99999.999 to 99999.999 (mm)

[#7623] PSW13 dog2 Imaginary dog position 2

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC.

1st part system device: X1D0C

2nd part system device: X1D2C

---Setting range----99999.999 to 99999.999 (mm)

[#7624] PSW13 check Selection of area check method

When position switch area checking at high speed is selected, specify the mode of area checking, i.e., whether to use the command type machine position or detector feedback position, for each position switch point.

 Use the command type machine position as the machine position for position switch area checking.

Use the detector feedback position as the machine position for position switch area checking.

(Note) This parameter is valid only when "1" set in "#7500 Pcheck".

[#7631] PSW14 axis Axis name

Specify the name of the axis for which a position switch is provided.

---Setting range--

X. Y. Z. U. V. W. A. B. or C axis address

Y V 7 II V W A R or

[#7632] PSW14 dog1 Imaginary dog position 1

When the machine enters the range between imaginary dog positions 1 and 2, a signal is

output to the PLC.

1st part system device: X1D0D

2nd part system device: X1D2D

---Setting range-

-99999.999 to 99999.999 (mm)

[#7633] PSW14 dog2 Imaginary dog position 2

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC.

1st part system device: X1D0D

2nd part system device: X1D0D

---Setting range---

-99999.999 to 99999.999 (mm)

[#7634] PSW14 check Selection of area check method

When position switch area checking at high speed is selected, specify the mode of area checking, i.e., whether to use the command type machine position or detector feedback position, for each position switch point.

(I. Use the command hope machine nosition as the machine position for position switch

area checking.

1: Use the detector feedback position as the machine position for position switch area

 Use the detector feedback position as the machine position for position switch area checking.

(Note) This parameter is valid only when "1" set in "#7500 Pcheck".

[#7641] PSW15 axis Axis name

Specify the name of the axis for which a position switch is provided.

---Setting range---

X, Y, Z, U, V, W, A, B, or C axis address

[#7642] PSW15 dog1 Imaginary dog position 1

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC.

1st part system device: X1D0E

2nd part system device: X1D0E

---Setting range--

-99999.999 to 99999.999 (mm)

[#7643] PSW15 dog2 Imaginary dog position 2

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC.

1st part system device: X1D0E

2nd part system device: X1D2E

---Setting range

-99999.999 to 99999.999 (mm)

[#7644] PSW15 check Selection of area check method

When position switch area checking at high speed is selected, specify the mode of area checking, i.e., whether to use the command type machine position or detector feedback position, for each position switch point.

- Use the command type machine position as the machine position for position switch area checking.
- Use the detector feedback position as the machine position for position switch area checking.

(Note) This parameter is valid only when "1" set in "#7500 Pcheck".

[#7651] PSW16 axis Axis name

Specify the name of the axis for which a position switch is provided.

---Setting range

X, Y, Z, U, V, W, A, B, or C axis address

[#7652] PSW16 dog1 Imaginary dog position 1

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC.

1st part system device: X1D0F

2nd part system device: X1D0F

---Setting range--

-99999.999 to 99999.999 (mm)

[#7653] PSW16 dog2 Imaginary dog position 2

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC.

1st part system device: X1D0F

2nd part system device: X1D2F

---Setting range---

-99999.999 to 99999.999 (mm)

[#7654] PSW16 check Selection of area check method

When position switch area checking at high speed is selected, specify the mode of area checking, i.e., whether to use the command type machine position or detector feedback position, for each position switch point.

- Use the command type machine position as the machine position for position switch area checking.
- Use the detector feedback position as the machine position for position switch area checking.

(Note) This parameter is valid only when "1" set in "#7500 Pcheck".

[#7661] PSW17 axis Axis name

Specify the name of the axis for which a position switch is provided.

---Setting range--

X, Y, Z, U, V, W, A, B, or C axis address

【#7662】 PSW17 dog1 Imaginary dog position 1

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC.

1st part system device: X1D10

2nd part system device: X1D30

---Setting range---

-99999.999 to 99999.999 (mm)

[#7663] PSW17 dog2 Imaginary dog position 2

When the machine enters the range between imaginary dog positions 1 and 2, a signal is

output to the PLC. 1st part system device: X1D10

2nd part system device: X1D10

---Setting range---

-99999.999 to 99999.999 (mm)

[#7664] PSW17 check Selection of area check method

When position switch area checking at high speed is selected, specify the mode of area checking, i.e., whether to use the command type machine position or detector feedback position, for each position switch point.

- Use the command type machine position as the machine position for position switch area checking.
- Use the detector feedback position as the machine position for position switch area checking.

(Note) This parameter is valid only when "1" set in "#7500 Pcheck".

[#7671] PSW18 axis Axis name

Specify the name of the axis for which a position switch is provided.

---Setting range---

X, Y, Z, U, V, W, A, B, or C axis address

Position Switches

[#7672] PSW18 dog1 Imaginary dog position 1

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC.

1st part system device: X1D11

2nd part system device: X1D31

-Setting range

-99999.999 to 99999.999 (mm)

[#7673] PSW18 dog2 Imaginary dog position 2

When the machine enters the range between imaginary dog positions 1 and 2, a signal is

output to the PLC 1st part system device: X1D11

2nd part system device: X1D31

---Setting range--99999.999 to 99999.999 (mm)

[#7674] PSW18 check Selection of area check method

When position switch area checking at high speed is selected, specify the mode of area checking, i.e., whether to use the command type machine position or detector feedback position, for each position switch point.

0: Use the command type machine position as the machine position for position switch area checking

 Use the detector feedback position as the machine position for position switch area checking.

(Note) This parameter is valid only when "1" set in "#7500 Pcheck".

[#7681] PSW19 axis Axis name

Specify the name of the axis for which a position switch is provided

--Setting range

X. Y. Z. U. V. W. A. B. or C axis address

[#7682] PSW19 dog1 Imaginary dog position 1 When the machine enters the range between imaginary dog positions 1 and 2, a signal is

output to the PLC.

1st part system device: X1D12 2nd part system device: X1D32

---Setting range -99999.999 to 99999.999 (mm)

[#7683] PSW19 dog2 Imaginary dog position 2

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC

1st part system device: X1D12

2nd part system device: X1D32

---Setting range-

-99999 999 to 99999 999 (mm)

[#7684] PSW19 check Selection of area check method

When position switch area checking at high speed is selected, specify the mode of area checking, i.e., whether to use the command type machine position or detector feedback position, for each position switch point.

0: Use the command type machine position as the machine position for position switch area checking.

1: Use the detector feedback position as the machine position for position switch area checking.

(Note) This parameter is valid only when "1" set in "#7500 Pcheck".

[#7691] PSW20 axis Axis name

Specify the name of the axis for which a position switch is provided.

---Setting range

X, Y, Z, U, V, W, A, B, or C axis address

[#7692] PSW20 dog1 Imaginary dog position 1

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC

1st part system device: X1D13

2nd part system device: X1D33

--Setting range

-99999.999 to 99999.999 (mm)

[#7693] PSW20 dog2 Imaginary dog position 2

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC.

1st part system device: X1D13

2nd part system device: X1D33

---Setting range

-99999.999 to 99999.999 (mm)

[#7694] PSW20 check Selection of area check method

When position switch area checking at high speed is selected, specify the mode of area checking, i.e., whether to use the command type machine position or detector feedback position, for each position switch point.

- 0: Use the command type machine position as the machine position for position switch area checking.
- 1: Use the detector feedback position as the machine position for position switch area checking

(Note) This parameter is valid only when "1" set in "#7500 Pcheck".

[#7701] PSW21 axis Axis name

Specify the name of the axis for which a position switch is provided.

---Setting range

X. Y. Z. U. V. W. A. B. or C axis address

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC

[#7702] PSW21 dog1 Imaginary dog position 1 1st part system device: X1D14

2nd part system device: X1D34

---Setting range-

-99999.999 to 99999.999 (mm)

[#7703] PSW21 dog2 Imaginary dog position 2

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC.

1st part system device: X1D14

2nd part system device: X1D34

-Setting range

-99999.999 to 99999.999 (mm)

[#7704] PSW21 check Selection of area check method

When position switch area checking at high speed is selected, specify the mode of area checking, i.e., whether to use the command type machine position or detector feedback position, for each position switch point.

- 0: Use the command type machine position as the machine position for position switch area checking
- Use the detector feedback position as the machine position for position switch area checking.

(Note) This parameter is valid only when "1" set in "#7500 Pcheck".

[#7711] PSW22 axis Axis name

Specify the name of the axis for which a position switch is provided.

--Setting range

X, Y, Z, U, V, W, A, B, or C axis address

[#7712] PSW22 dog1 Imaginary dog position 1

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC.

1st part system device: X1D15

2nd part system device: X1D35

---Setting range-

-99999.999 to 99999.999 (mm)

[#7713] PSW22 dog2 Imaginary dog position 2

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC. 1st part system device: X1D15

2nd part system device: X1D35

---Setting range---

-99999 999 to 99999 999 (mm)

[#7714] PSW22 check Selection of area check method

When position switch area checking at high speed is selected, specify the mode of area checking, i.e., whether to use the command type machine position or detector feedback position, for each position switch point.

- 0: Use the command type machine position as the machine position for position switch area checking.
 - 1: Use the detector feedback position as the machine position for position switch area checking

(Note) This parameter is valid only when "1" set in "#7500 Pcheck".

[#7721] PSW23 axis Axis name

Specify the name of the axis for which a position switch is provided.

---Setting range

X, Y, Z, U, V, W, A, B, or C axis address

Position Switches

[#7722] PSW23 dog1 Imaginary dog position 1

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC.

1st part system device: X1D16

2nd part system device: X1D36

---Setting range----99999.999 to 99999.999 (mm)

[#7723] PSW23 dog2 Imaginary dog position 2

When the machine enters the range between imaginary dog positions 1 and 2, a signal is

output to the PLC. 1st part system device: X1D16

2nd part system device: X1D36 ---Setting range---

-99999.999 to 99999.999 (mm)

[#7724] PSW23 check Selection of area check method

When position switch area checking at high speed is selected, specify the mode of area checking, i.e., whether to use the command type machine position or detector feedback position, for each position switch point.

 Use the command type machine position as the machine position for position switch area checking.

Use the detector feedback position as the machine position for position switch area checking.

(Note) This parameter is valid only when "1" set in "#7500 Pcheck".

[#7731] PSW24 axis Axis name

Specify the name of the axis for which a position switch is provided.

---Setting range--

X. Y. Z. U. V. W. A. B. or C axis address

X, Y, Z, U, V, W, A, B, or C axis a

[#7732] PSW24 dog1 Imaginary dog position 1

When the machine enters the range between imaginary dog positions 1 and 2, a signal is

output to the PLC.

1st part system device: X1D17 2nd part system device: X1D37

- .

---Setting range----99999.999 to 99999.999 (mm)

[#7733] PSW24 dog2 Imaginary dog position 2

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC.

1st part system device: X1D17

2nd part system device: X1D37

---Setting range---

-99999.999 to 99999.999 (mm)

[#7734] PSW24 check Selection of area check method

When position switch area checking at high speed is selected, specify the mode of area checking, i.e., whether to use the command type machine position or detector feedback position, for each position switch point.

- Use the command type machine position as the machine position for position switch area checking.
- Use the detector feedback position as the machine position for position switch area checking.

(Note) This parameter is valid only when "1" set in "#7500 Pcheck".

11. Auxiliary Axis Parameters

【#50001(PR)】 MSR Motor series

Set the motor series. When set to the default value ("0000"), the system will automatically judge the series.

---Setting range

0000 to FFFF (hexadecimal)

[#50002(PR)] RTY Regeneration option type

Set the regenerative resistor type.

Setting value of the third digit from the left 0: Drive unit standard built-in resistor (10CT has no built-in resistor)

1: Setting prohibited 2: MR-RB032 (30W)

3: MR-RB12 (100W) 4: MR-RB32 (300W)

5: MR-RB30 (300W) 6: MR-RB50 (500W)

7 to F: Setting prohibited

Do not set values that are not written here

[#50003(PR)] PC1 Motor side gear ratio (machine rotation ratio)

Set the number of gear teeth on the motor side and the number of gear teeth on the machine side as an integer reduced to its lowest terms.

Set the total gear ratio if there are multiple gear levels For rotary axes, set the motor rotation speed per machine rotation.

Default value: 1 ---Setting range

1 to 32767

【#50004(PR)】 PC2 Machine side gear ratio (motor rotation ratio)

Set the number of gear teeth on the motor side and the number of gear teeth on the

machine side as an integer reduced to its lowest terms. Set the total gear ratio if there are multiple gear levels.

For rotary axes, set the motor rotation speed per machine rotation. Default value: 1

---Setting range

1 to 32767

[#50005(PR)] PIT Feed pitch

Set the feed nitch

Set "360" (default value) for rotary axes.

Set the feed lead for linear axes

---Setting range

1 to 32767(° or mm)

[#50006] INP In-position detection width

Set the position droop for the in-position detection.

In-position will be detected when the position droop reaches the setting value or less. Default value: 50

---Setting range-

1 to 32767 (1/1000° or μ m)

【#50007】 ATU Auto-tuning

Set the adjustment of the auto-tuning.

Default value: 0102

***1: Low response (low-rigidity loads, loads which easily vibrate)

***2: Standard setting value ***3:

***4

***5: High response (high-rigidity loads, loads which do not easily vibrate)

**0*: Standard friction amount **1*: Large friction amount (set the position loop gain slightly lower)

*0**: Only auto-tuning PG2, VG2, VIC, and GD2 *1**: Only auto-tuning PG1, PG2, VG1, VG2, VIC, and GD2 (total gain). (Standard settina)

*2**: No auto-tuning

Do not set values that are not explained here.

【#50008】 PG1 Position loop gain 1

Set the position loop gain of the model loop. This parameter determines the trackability to a position command

Default value: 70

---Setting range

4 to 1000 (1/s)

[#50009]

Not used. Set to "0".

Auxiliary Axis Parameters

[#50010] EMGt Deceleration control time constant

Set the deceleration time from the clamp speed (Aspeed1). Set the same value as the acceleration/deceleration time constant used for the normal rapid traverse. Default value: 500

---Setting range 0 to 32768 (ms)

【#50011】

Not used. Set to "0".

(#50012)

Not used. Set to "0".

[#50013] MBR Vertical axis drop prevention time

Set the time to delay the servo OFF during servo OFF command. Increase the setting by 100ms at a time and set the minimum value where the axis does not drop.

Default value: 100 ---Setting range

0 to 1000 (ms)

【#50014】 NCH Notch filter No.

Set the frequency of the machine resonance suppression filter.

- 0: Not used
- 1: 1125 (Hz)
- 2: 563 3: 375
- 4. 282
- 5: 225
- 6: 188 7: 161

【#50015】

Not used. Set to "0".

[#50016] JIT Jitter compensation

Set the number of pulses that ignore the litter compensation.

0: The function is not used

1 to 3: 1 to 3 pulses ignore.

[#50017]

Not used. Set to "0".

【#50018】

Not used. Set to "0".

【#50019】 PG2 Position loop gain 2

Set the position loop gain of the actual loop

Determine the position responsiveness to external disturbance. Default value: 25

---Setting range 1 to 500 (1/s)

【#50020】 VG1 Speed loop gain 1

Set the speed loop gain of the model loop.
This parameter determines the tracking ability to a speed command.

Default value: 1200

---Setting range 20 to 5000 (1/s)

【#50021】 VG2 Speed loop gain 2

Set the speed loop gain of the actual loop.

This parameter det rmines the speed responsiveness to external disturbance. Default value: 600

---Setting range-

20 to 8000 (1/s)

[#50022] VIC Speed integral compensation

Set the characteristics of the speed low-frequency region.

Default value: 20

---Setting range-

1 to 1000 (ms)

[#50023] VDC Speed differential compensation

Set the speed differential compensation to reduce overshoot.

When the default value "1000" is set, the normal PI control will start.

Adjust the overshoot amount by lowering in increments of 20.

---Setting range

0 to 1000

Auxiliary Axis Parameters

[#50024] DG2 Load inertia ratio

Set the ratio of load inertia to motor inertia.

Default value: 2.0

---Setting range-0.0 to 50.0 (fold)

[#50025]

Not used. Set to "0".

[#50030(PR)] MTY Motor type

Set the motor type. When set to the default value ("0000"), the system will automatically judge the type.

---Setting range

0000 to FFFF (hexadecimal)

【#50050】 MD1 D/A output channel 1 data No.

Set the Nos. of the data to output on D/A output channel 1.

Default value: 0000

Setting value of the rightmost digit

0: Speed feedback (with sign) Maximum speed = 8V

1: Current feedback (with sign) Maximum current (torque) = 8V

2: Speed feedback (without sign) Maximum speed = 8V

3: Current feedback (without sign) Maximum current (torque) = 8V

3: Current feedback (without sign) Maximum current 4: Current command Maximum current (torque) = 8V 5: Command FDT 100000 [degrees/min] = 10V 7: Position droop 1 (1/1) 2048 [pulse] = 10V 7: Position droop 2 (1/4) 8192 [pulse] = 10V 8: Position droop 3 (1/16) 32768 [pulse] = 10V 9: Position droop 4 (1/32) 65536 [pulse] = 10V A: Position droop 5 (1/64) 131072 [pulse] = 10V

[#50051] MO1 D/A output channel 1 output offset

Set this parameter when the zero level of D/A output channel 1 is not equal to zero.

--Setting range

-999 to 999 (mV)

[#50052]

Not used. Set to "0"

[#50053] MD2 D/A output channel 2 data No.

Set the Nos. of the data to output on D/A output channel 2.

Descriptions are the same as in "#50050 MD1" Default value: 0000

---Setting range

0000 to FFFF (hexadecimal)

[#50054] MO2 D/A output channel 2 output offset

Set this parameter when the zero level of D/A output channel 2 is not equal to zero.

Default value: 0

---Setting range -999 to 999 (mV)

【#50055】

Not used. Set to "0"

[#50100(PR)] station Number of indexing stations

Set the number of stations.
For linear axes, this value is expressed by: number of divisions = number of stations - 1.

Default value: 2

--Setting range-

2 to 360

Auxiliary Axis Parameters

[#50101(PR)] Cont1 Control parameter 1

The bits that are not explained here must be set to the default value.

Default value : bit9 = "1", Other bits ="0

bit1:

- 0: High-speed zero point return after the establishment of zero point
- 1: Dog-type return for each reference position return

bit8:

0: Reference position return direction (+) 1: Reference position return direction (-)

bit9:

0: Rotation direction determined by operation control signal (DIR)

1: Rotation direction in the shortcut direction

bitA

- 0: Machine basic position becomes the basic point.
- Electrical basic position becomes the basic point

bitD

Creation of coordinate zero point is valid.
 Zero point is established at power supply ON position

bitE

- 0: Rotation direction in operation control signal (DIR) or in the shortcut direction 1: Rotation direction in the arbitrary position command sign direction

bitF

Stopper direction is in the positioning direction.
 Stopper direction is in the sign direction of the stopper amount.

[#50102(PR)] Cont2 Control parameter 2

The bits that are not explained here must be set to the default value.

Default value: bit1,2,7 = "1", Other bits ="0"

bit1:

0: Error not corrected at servo OFF 1: Error corrected at servo OFF

bit2:

- 0: Linear axis 1: Rotary axis

bit3:

0: Station assignment direction CW 1: Station assignment direction CCW

bit4:

- 0: Uniform assignment 1: Non-uniform assignment

bit5:

- 0: DO channel standard assignment 1: DO channel reverse assignment

bit6:

- 0: 2-wire detector communication 1: 4-wire detector communication

bit7:

- 0: Incremental detection
- 1: Absolute position detection

[#50103(PR)] EmgCont Emergency stop control

The bits that are not explained here must be set to the default value. Default value: bit0 = "1". Other bits = "0"

bit0:

- 0: Enable external emergency stop
 1: Disable external emergency stop

bit1:

- 0: Dynamic brake stop at emergency stop
- 1: Deceleration control stop at emergency stop

bit2:

- 0: Enable NC bus emergency stop input 1: Disable NC bus emergency stop input

bit3:

- 0: Enable NC bus emergency stop output
 - 1: Disable NC bus emergency stop output

Auxiliary Axis Parameters

[#50104(PR)] tleng Linear axis stroke length

Set the travel stroke length for linear axis The set value for this parameter will be ignored when non-uniform assignments are set or random positions are commanded.

Default value: 100,000

-Setting range

0.001 to 99999.999 (mm)

[#50110] ZRNspeed Reference position return speed

Set the clamp value of the feedrate when a reference position return is carried out. The feedrate applies the manual operation speed in the parameter group selected at the

time, which is clamped by this parameter set value.

Default value: 1000

---Setting range

1 to 100000 (°/min or mm/min)

[#50111] ZRNcreep Reference position return creep speed

Set the approach speed to the reference position after dog detection during a reference position return

Default value: 200

-Setting range

1 to 65535 (°/min or mm/min)

[#50112] grid mask Grid mask

Set the amount that the dog is artificially extended. Normally set the half amount of the grid

spacing. Default value: 0

---Setting range-

0 to 65536 (1/1000° or μ m)

【#50113(PR)】 grspc Grid spacing

Select the number of divisions in the grid spacing that is the conventional motor rotation travel amount

The setting values "1", "2", "3" and "4" divide into 2, 4, 8 and 16 divisions respectively.

Default value: 0

---Setting range

0 to 4 ("1 / (n-th power of 2)" divisions)

【#50114】 ZRNshift Reference position shift amount

Set the shift amount in a dog-type reference position return from the electrical basic position, which is determined on the grid, to the reference position.

Default value: 0

---Setting range-

0 to 65536 (1/1000° or μ m)

[#50115] ST. ofset Station offset

Set the distance (offset) from the reference position to station 1.

Default value: 0.000

---Setting range-

-99999 999 to 99999 999 (° or mm)

[#50116(PR)] ABS base Absolute position zero point

Set the travel distance in shifting the machine coordinate basic point from the standard point during absolute position initializing.

Default value: 0.000

---Setting range

-99999.999 to 99999.999 (° or mm)

[#50117] Limit(+) Soft limit (+)

Set the upper limit for commands in the plus direction

Commands in the plus direction beyond this set value are not possible. If the machine is in a position exceeding the setting value, commands in the minus direction

will be possible

If "#50117 Limit(+)" and "#50118 Limit(-)" are set to the same value, the soft limit function

will not operate. Default value: 1 000

---Setting range-

-99999.999 to 99999.999 (mm)

[#50118] Limit(-) Soft limit (-)

Set the lower limit for commands in the minus direction.

Commands in the minus direction beyond this set value are not possible.

If the machine is in a position exceeding the setting value, commands in the plus direction

will be possible.

Default value: 1.000

---Setting range-

-99999.999 to 99999.999 (mm)

Auxiliary Axis Parameters

[#50120] ABS Type Absolute position detection parameter

The bits that are not explained here must be set to the default value.

Default value : bit2 = "1", Other bits ="0

bit1:

- 0: Dogless-type method initializing
- 1: Dog-type method initializing

bit2:

0: Machine end stopper method initializing 1: Marked point alignment method initializing

bit3:

- 0: Electrical basic position direction (+)
 1: Electrical basic position direction (-)

[#50123(PR)] ABS check Absolute position power OFF tolerable movement value

Set the tolerable amount of travel for a machine that travels during power OFF in an absolute position detection system.

The "Absolute position power OFF movement exceeded (ABS)" signal will turn ON if the

machine travels more than this setting value during power OFF.

The travel amount will not be checked when this parameter is set to "0.000".

Default value: 0.000

---Setting range

0.000 to 99999.999 (° or mm)

[#50130] backlash Backlash compensation amount

Set the backlash compensation amount.

Default value: 0

---Setting range-

0 to 9999 (1/1000° or μ m)

[#50132]

Not used. Set to "0".

[#50133]

Not used. Set to "0".

[#50134]

Not used. Set to "0"

(#50135)

Not used. Set to "0"

[#50150] Aspeed1 Operation parameter group 1 Automatic operation speed

Set the feedrate during automatic operation when operation parameter group 1 is selected.

This parameter is regarded as the clamp value for the automatic operation speeds and manual operation speeds of all operation groups.
A speed exceeding Aspeed1 cannot be commanded, even if it is set in a parameter.
Default value: 5000

---Setting range

1 to 100000 (°/min or mm/min)

[#50151] Mspeed1 Operation parameter group 1 Manual operation speed

Set the feedrate during manual operation or JOG operation when operation parameter group 1 is selected.

Default value: 2000

---Setting range

1 to 100000 (°/min or mm/min)

[#50152] time1.1 Operation parameter group 1 Acceleration/deceleration time constant 1

Set the linear acceleration/deceleration time for "Operation parameter group 1 automatic operation speed" (clamp speed) when operation parameter group 1 is selected. When operating at a lower speed than the clamp speed, the axis will linearly accelerate/ decelerate at the inclination determined above.

When this is set with "Acceleration/deceleration time constant 2", S-pattern acceleration/ deceleration will be carried out. In this case, this parameter determines the acceleration/ deceleration time of the linear part.

Default value: 100

---Setting range-

1 to 9999 (ms)

[#50153] time1.2 Operation parameter group 1 Acceleration/deceleration time constant 2

Set this parameter when carrying out S-pattern acceleration/deceleration. Set the total time of the non-linear parts in the S-pattern acceleration/deceleration. When "1" is set, linear acceleration/deceleration will be carried out.

In the handle feed operation mode, this setting value is regarded as time constant for the linear acceleration/deceleration.

Default value: 1

---Setting range-

1 to 999 (ms)

[#50154] TL1 Operation parameter group 1 Torque limit value

Set the motor output torque limit value when operation parameter group 1 is selected. At the default value, the torque is limited at the maximum torque of the motor specifications Set the default value when torque limit is not especially required.

In the stopper positioning operation mode, this will be regarded as torque limit value when positioning to the stopper starting coordinates.

Default value: 500

---Setting range 1 to 500 (%)

[#50155] OD1 Operation parameter group 1 Excessive error detection width

Set the excessive error detection width when operation parameter group 1 is selected. The excessive error alarm (\$03,0052) will be detected when the position droop becomes larger than this setting value.

In the stopper positioning operation mode, this will be regarded as excessive error detection width when positioning to the stopper starting coordinates Default value: 100

--Setting range 0 to 32767 (° or mm)

[#50156] just1 Operation parameter group 1 Set position output width

Set the tolerable value at which "set position reached" (JST) or "automatic set position reached" (JSTA) signal is output when operation parameter group 1 is selected. "Set position reached" (JST) indicates that the machine position is at any station. During automatic operation, "automatic set position reached" (JSTA) is also output under the same condition. These signals will turn OFF when the machine position moves away from the station over this value

Default value: 0.500

---Setting range

0.000 to 99999.999 (° or mm)

[#50157] near1 Operation parameter group 1 Near set position output width

Set the tolerable value at which "near set position" (NEAR) signal is output when operation parameter group 1 is selected.

'Near set position" (NEAR) indicates that the machine position is near any station position. This value is generally set wider than the set position output width. During operations, this is related to the special commands when the station selection is set to "0"

Default value: 1 000

---Setting range 0.000 to 99999.999 (° or mm)

[#50158] Aspeed2 Operation parameter group 2 Automatic operation speed

Set the feedrate during automatic operation when operation parameter group 2 is selected Default value: 5000

-Setting range

1 to 100000 (°/min or mm/min)

[#50159] Mspeed2 Operation parameter group 2 Manual operation speed

Set the feedrate during manual operation or JOG operation when operation parameter group 2 is selected

Default value: 2000

---Setting range

1 to 100000 (°/min or mm/min)

[#50160] time2.1 Operation parameter group 2 Acceleration/deceleration time constant 1

Set the linear acceleration/deceleration time for "Operation parameter group 1 automatic operation speed" (clamp speed) when operation parameter group 2 is selected When operating at a lower speed than the clamp speed, the axis will linearly accelerate/ decelerate at the inclination determined above.

When this is set with "Acceleration/deceleration time constant 2", S-pattern acceleration/ deceleration will be carried out. In this case, this parameter determines the acceleration/ deceleration time of the linear part.

Default value: 100

---Setting range 1 to 9999 (ms)

[#50161] time2.2 Operation parameter group 2 Acceleration/deceleration time constant 2

Set this parameter when carrying out S-pattern acceleration/deceleration. Set the total time of the non-linear parts in the S-pattern acceleration/deceleration. When "1" is set, linear acceleration/deceleration will be carried out.

In the handle feed operation mode, this setting value is regarded as time constant for the linear acceleration/deceleration.

Default value: 1

---Setting range 1 to 999 (ms)

[#50162] TL2 Operation parameter group 2 Torque limit value

Set the motor output torque limit value when operation parameter group 2 is selected. At the default value, the torque is limited at the maximum torque of the motor specifications. Set the default value when torque limit is not especially required.

In the stopper positioning operation mode, this will be regarded as torque limit value during the stopper operation

Default value: 500

--Setting range 1 to 500 (%)

Auxiliary Axis Parameters

[#50163] OD2 Operation parameter group 2 Excessive error detection width

Set the excessive error detection width when operation parameter group 2 is selected. The excessive error alarm (S03 0052) will be detected when the position droop becomes larger than this setting value.

In the stopper positioning operation mode, this will be regarded as excessive error detection width during the stopper operation.

Default value: 100

Delault value: 100

---Setting range---0 to 32767 (° or mm)

[#50164] just2 Operation parameter group 2 Set position output width

Set the tolerable value at which "set position reached" (JST) or "automatic set position reached" (JSTA) signal is output when operation parameter group 2 is selected. "Set position reached" (JST) indicates that the machine position is at any station. During automatic operation, "automatic set position reached" (JSTA) is also output under the same condition. These signals will turn OFF when the machine position moves away from the station over this value.

Default value: 0.500

---Setting range---

0.000 to 99999.999 (° or mm)

[#50165] near2 Operation parameter group 2 Near set position output width

Set the tolerable value at which "near set position" (NEAR) signal is output when operation

parameter group 2 is selected.

Near set position (NEAR) indicates that the machine position is near any station position.

This value is generally set wider than the set position output width.

During operations, this is related to the special commands when the station selection is set to "n"

Default value: 1 000

---Setting range--

0.000 to 99999.999 (° or mm)

[#50166] Aspeed3 Operation parameter group 3 Automatic operation speed

Set the feedrate during automatic operation when operation parameter group 3 is selected. Default value: 5000

--Setting range--

1 to 100000 (°/min or mm/min)

[#50167] Mspeed3 Operation parameter group 3 Manual operation speed

Set the feedrate during manual operation or JOG operation when operation parameter group 3 is selected.

Default value: 2000

---Setting range---

1 to 100000 (°/min or mm/min)

[#50168] time3.1 Operation parameter group 3 Acceleration/deceleration time constant 1

Set the linear acceleration/deceleration time for *Operation parameter group 3 automatic operation speed* (clamp speed) when operation parameter group 1 is selected. When operating at a lower speed than the clamp speed, the axis will linearly accelerate/decelerate at the inclination determined above.

When this is set with "Acceleration/deceleration time constant 2", S-pattern acceleration/ deceleration will be carried out. In this case, this parameter determines the acceleration/ deceleration time of the linear part.

Default value: 100

---Setting range---

1 to 9999 (ms)

[#50169] time3.2 Operation parameter group 3 Acceleration/deceleration time constant 2

Set this parameter when carrying out S-pattern acceleration/deceleration. Set the total time of the non-linear parts in the S-pattern acceleration/deceleration. When "1" is set, linear acceleration/deceleration will be carried out. In the handle feed operation mode, this setting value is regarded as time constant for the

linear acceleration/deceleration.

Default value: 1

---Setting range--1 to 999 (ms)

[#50170] TL3 Operation parameter group 3 Torque limit value

Set the motor output torque limit value when operation parameter group 3 is selected. At the default value, the torque is limited at the maximum torque of the motor specifications. Set the default value when torque limit is not especially required. In the stopper positioning operation mode, this will be regarded as pressing torque limit value after completion of the positioning.

Default value: 500

---Setting range--1 to 500 (%)

[#50171] OD3 Operation parameter group 3 Excessive error detection width

Set the excessive error detection width when operation parameter group 3 is selected. The excessive error alarm (\$03 0052) will be detected when the position droop becomes larger than this setting value.

In the stopper positioning operation mode, this will be regarded as excessive error detection. width during pressing after completion of the positioning.

Default value: 100

---Setting range 0 to 32767 (° or mm)

[#50172] just3 Operation parameter group 3 Set position output width

Set the tolerable value at which "set position reached" (JST) or "automatic set position reached" (JSTA) signal is output when operation parameter group 3 is selected.
"Set position reached" (JST) indicates that the machine position is at any station. During automatic operation, "automatic set position reached" (JSTA) is also output under the same condition. These signals will turn OFF when the machine position moves away from the station over this value

Default value: 0.500

---Setting range

0.000 to 99999.999 (° or mm)

[#50173] near3 Operation parameter group 3 Near set position output width

Set the tolerable value at which "near set position" (NEAR) signal is output when operation

Set title fulleration within a wind in least set position (NEAN) signals sought microportation parameter group 3 is selected.

Near set position (NEAR) indicates that the machine position is near any station position. This value is generally set wider than the set position output width. During operations, this is related to the special commands when the station selection is set to "0"

Default value: 1.000

---Setting range

0.000 to 99999.999 (° or mm)

[#50174] Aspeed4 Operation parameter group 4 Automatic operation speed

Set the feedrate during automatic operation when operation parameter group 4 is selected. Default value: 5000

---Setting range

1 to 100000 (°/min or mm/min)

[#50175] Mspeed4 Operation parameter group 4 Manual operation speed

Set the feedrate during manual operation or JOG operation when operation parameter group 4 is selected.

Default value: 2000

--Setting range

1 to 100000 (°/min or mm/min)

[#50176] time4.1 Operation parameter group 4 Acceleration/deceleration time constant 1

Set the linear acceleration/deceleration time for "Operation parameter group 1 automatic operation speed" (clamp speed) when operation parameter group 4 is selected. When operating at a lower speed than the clamp speed, the axis will linearly accelerate/ decelerate at the inclination determined above.

When this is set with "Acceleration/deceleration time constant 2", S-pattern acceleration/ deceleration will be carried out. In this case, this parameter determine deceleration time of the linear part.

Default value: 100

---Setting range 1 to 9999 (ms)

[#50177] time4.2 Operation parameter group 4 Acceleration/deceleration time constant 2

Set this parameter when carrying out S-pattern acceleration/deceleration. Set the total time of the non-linear parts in the S-pattern acceleration/deceleration. When is set, linear acceleration/deceleration will be carried out.

In the handle feed operation mode, this setting value is regarded as time constant for the linear acceleration/deceleration.

Default value: 1

---Setting range 1 to 999 (ms)

[#50178] TL4 Operation parameter group 4 Torque limit value

Set the motor output torque limit value when operation parameter group 4 is selected. At the default value, the torque is limited at the maximum torque of the motor specifications Set the default value when torque limit is not especially required.

In the stopper method initializing mode in absolute position detection system, this is

regarded as torque limit value during stopper operation. Default value: 500

---Setting range 1 to 500 (%)

[#50179] OD4 Operation parameter group 4 Excessive error detection width

Set the excessive error detection width when operation parameter group 4 is selected. The excessive error alarm (S03 0052) will be detected when the position droop becomes larger than this setting value

In the stopper method initializing mode in absolute position detection system, this is regarded as excessive error detection width during stopper operation.

Default value: 100 -Setting range

0 to 32767 (° or mm)

[#50180] just4 Operation parameter group 4 Set position output width

Set the tolerable value at which "set position reached" (JST) or "automatic set position reached" (JSTA) signal is output when operation parameter group 4 is selected.
"Set position reached" (JST) indicates that the machine position is at any station. During automatic operation, "automatic set position reached" (JSTA) is also output under the same condition. These signals will turn OFF when the machine position moves away from the station over this value

Default value: 0.500

--Setting range

0.000 to 99999.999 (° or mm)

[#50181] near4 Operation parameter group 4 Near set position output width

Set the tolerable value at which "near set position" (NEAR) signal is output when operation

parameter group 4 is selected.
"Near set position" (NEAR) indicates that the machine position is near any station position.

This value is generally set wider than the set position output width.

During operations, this is related to the special commands when the station selection is set

to "0 Default value: 1 000

---Setting range

0.000 to 99999 999 (° or mm)

[#50190] stpos2 Station 2 coordinate

Set the station 2 coordinate value when non-uniform assignment is selected. The station 1 coordinate value is fixed at "0.000" (machine coordinate zero point). Default value: 0.000

--Setting range

-99999 999 to 99999 999 (° or mm)

【#50191】 stpos3 Station 3 coordinate

Set the station 3 coordinate value when non-uniform assignment is selected. The station 1 coordinate value is fixed at "0.000" (machine coordinate zero point). Default value: 0.000

---Setting range

-99999.999 to 99999.999 (° or mm)

[#50192] stpos4 Station 4 coordinate

Set the station 4 coordinate value when non-uniform assignment is selected. The station 1 coordinate value is fixed at "0.000" (machine coordinate zero point). Default value: 0.000

---Setting range-

-99999 999 to 99999 999 (° or mm)

[#50193] stpos5 Station 5 coordinate

Set the station 5 coordinate value when non-uniform assignment is selected.
The station 1 coordinate value is fixed at "0.000" (machine coordinate zero point). Default value: 0.000

---Setting range

-99999.999 to 99999.999 (° or mm)

【#50194】 stpos6 Station 6 coordinate

Set the station 6 coordinate value when non-uniform assignment is selected.

The station 1 coordinate value is fixed at "0.000" (machine coordinate zero point). Default value: 0.000

---Setting range

-99999.999 to 99999.999 (° or mm)

[#50195] stpos7 Station 7 coordinate

Set the station 7 coordinate value when non-uniform assignment is selected. The station 1 coordinate value is fixed at "0.000" (machine coordinate zero point). Default value: 0.000

---Setting range-

-99999 999 to 99999 999 (° or mm)

[#50196] stpos8 Station 8 coordinate

Set the station 8 coordinate value when non-uniform assignment is selected. The station 1 coordinate value is fixed at "0.000" (machine coordinate zero point).

Default value: 0.000

-Setting range -99999.999 to 99999.999 (° or mm)

[#50197] stpos9 Station 9 coordinate

Set the station 9 coordinate value when non-uniform assignment is selected. The station 1 coordinate value is fixed at "0.000" (machine coordinate zero point). Default value: 0.000

---Setting range

-99999.999 to 99999.999 (° or mm)

[#50200] PSWcheck PSW detection method

Select the criterion for the output of position switches 1 to 8.

bit0 to 7 correspond to position switches 1 to 8

Judged by the machine position of the command system
 Judged by the machine FB position (actual position).

The bits that are not written here must be set to "0"

[#50201] PSW1 dog1 PSW1 area setting 1

Set "PSW1 area setting" 1 and 2 to specify the area where the position switch 1 will turn ON when the machine is positioned.

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the position switch operation. For rotary axes, the output turns ON in the area excluding 0.000 degree

Default value: 0.000

---Setting range-

-99999 999 to 99999 999 (° or mm)

[#50202] PSW1 dog2 PSW1 area setting 2

Set "PSW1 area setting" 1 and 2 to specify the area where the position switch 1 will turn ON when the machine is positioned.

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the

position switch operation. For rotary axes, the output turns ON in the area excluding 0.000 degree

Default value: 0.000

-Setting range

-99999.999 to 99999.999 (° or mm)

[#50203] PSW2 dog1 PSW2 area setting 1

Set "PSW2 area setting" 1 and 2 to specify the area where the position switch 2 will turn ON when the machine is positioned.

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the position switch operation. For rotary axes, the output turns ON in the area excluding 0.000 degree

Default value: 0.000

-Setting range

-99999.999 to 99999.999 (° or mm)

[#50204] PSW2 dog2 PSW2 area setting 2

Set "PSW2 area setting" 1 and 2 to specify the area where the position switch 2 will turn ON when the machine is positioned.

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the position switch operation. For rotary axes, the output turns ON in the area excluding 0.000 degree

Default value: 0.000

---Setting range-

-99999 999 to 99999 999 (° or mm)

[#50205] PSW3 dog1 PSW3 area setting 1

Set "PSW3 area setting" 1 and 2 to specify the area where the position switch 3 will turn ON

when the machine is positioned.
Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the position switch operation. For rotary axes, the output turns ON in the area excluding 0.000 degree

Default value: 0.000

---Setting range

-99999.999 to 99999.999 (° or mm)

[#50206] PSW3 dog2 PSW3 area setting 2

Set "PSW3 area setting" 1 and 2 to specify the area where the position switch 3 will turn ON when the machine is positioned.

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the position switch operation. For rotary axes, the output turns ON in the area excluding 0.000 degree

Default value: 0.000

---Setting range-

-99999.999 to 99999.999 (° or mm)

[#50207] PSW4 dog1 PSW4 area setting 1

Set "PSW4 area setting" 1 and 2 to specify the area where the position switch 4 will turn ON hen the machine is positioned

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the position switch operation. For rotary axes, the output turns ON in the area excluding 0.000 degree.

Default value: 0.000

---Setting range

-99999.999 to 99999.999 (° or mm)

[#50208] PSW4 dog2 PSW4 area setting 2

Set "PSW4 area setting" 1 and 2 to specify the area where the position switch 4 will turn ON when the machine is positioned.
Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the

position switch operation. For rotary axes, the output turns ON in the area excluding 0.000 degree

Default value: 0.000

-Setting range

-99999.999 to 99999.999 (° or mm)

[#50209] PSW5 dog1 PSW5 area setting 1

Set "PSW5 area setting" 1 and 2 to specify the area where the position switch 5 will turn ON when the machine is positioned.

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the position switch operation. For rotary axes, the output turns ON in the area excluding 0.000 degree.

Default value: 0.000

---Setting range---

-99999.999 to 99999.999 (° or mm)

[#50210] PSW5 dog2 PSW5 area setting 2

Set "PSW5 area setting" 1 and 2 to specify the area where the position switch 5 will turn ON when the machine is positioned.

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the position switch operation. For rotary axes, the output turns ON in the area excluding 0.000 degree.

Default value: 0.000

---Setting range---

-99999.999 to 99999.999 (° or mm)

[#50211] PSW6 dog1 PSW6 area setting 1

Set "PSW6 area setting" 1 and 2 to specify the area where the position switch 6 will turn ON when the machine is positioned.

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the position switch operation. For rotary axes, the output turns ON in the area excluding 0.000 decree.

Default value: 0.000

---Setting range---

-99999.999 to 99999.999 (° or mm)

[#50212] PSW6 dog2 PSW6 area setting 2

Set "PSW6 area setting" 1 and 2 to specify the area where the position switch 6 will turn ON when the machine is positioned.

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the position switch operation. For rotary axes, the output turns ON in the area excluding 0.000 degree.

Default value: 0.000

---Setting range--

-99999.999 to 99999.999 (° or mm)

[#50213] PSW7 dog1 PSW7 area setting 1

Set "PSW7 area setting" 1 and 2 to specify the area where the position switch 7 will turn ON when the machine is positioned.

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the position switch operation. For rotary axes, the output turns ON in the area excluding 0.000 degree.

Default value: 0.000

---Setting range--

-99999.999 to 99999.999 (° or mm)

[#50214] PSW7 dog2 PSW7 area setting 2

Set "PSW7 area setting" 1 and 2 to specify the area where the position switch 7 will turn ON when the machine is positioned.

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the position switch operation. For rotary axes, the output turns ON in the area excluding 0.000 degree.

Default value: 0.000

---Setting range---

-99999.999 to 99999.999 (° or mm)

[#50215] PSW8 dog1 PSW8 area setting 1

Set "PSW8 area setting" 1 and 2 to specify the area where the position switch 8 will turn ON when the machine is positioned.

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the position switch operation. For rotary axes, the output turns ON in the area excluding 0.000 degree.

Default value: 0.000

---Setting range---

-99999.999 to 99999.999 (° or mm)

[#50216] PSW8 dog2 PSW8 area setting 2

Set "PSW8 area setting" 1 and 2 to specify the area where the position switch 8 will turn ON when the machine is positioned.
Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the

whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the position switch operation. For rotary axes, the output turns ON in the area excluding 0.000 degree.

Default value: 0.000

---Setting range---

-99999.999 to 99999.999 (° or mm)

【#50220】 push.1 Stopper amount

Set the command stroke of the stopper operation in the stopper positioning.

Default value: 0.000

---Setting range--

0.000 to 359.999 (° or mm)

Auxiliary Axis Parameters

[#50221] push.t1 Stopper standby time

Set the standby time from the stopper starting coordinate positioning to the stopper operation start in the stopper positioning.

Default value: 0
---Setting range--0 to 9999 (ms)

[#50222] push.t2 Stopper torque release time

Set the time from the completion of the stopper operation to the changeover of the stopper torque in the stopper positioning.

Default value: 0

Delault value: 0

---Setting range---0 to 9999 (ms)

[#50223] push.t3 Set position signal output delay time

Set the time from the completion of the stopper operation to the output of the "automatic set position reached" (JSTa), "set position reached" (JSTa) or "near set position" (NEAR) signal in the stopper positioning.

Default setting: 0
---Setting range---

0 to 9999 (ms)

12. Open Parameters

[#29001] Open param 1 Set LONG data.

#29001 to #29896 are used as parameter range where C language modules can be used arbitrarily.

---Setting range---

[#29901] Open param 2

Set DOUBLE data. #29901 to #29996 are used as parameter range where C language modules can be used arbitrarily.

---Setting range---

13. Device Open Parameters

[#40001-40100] Device Open Parameters

<Data typ>

Set the data format (BYTE, WORD, DWORD, WORD(BIT)) of the assignment area. 0:WORD

1:DWORD

2-BYTE

3:WORD(BIT) <Data no>

Set the number of data in the assignment area. The number to be designated varies depending on the unit designated by the data format. 0 to 3000

(Depends on the device assignment and data format.)

<Disp typ>

Designate the status of data display format, display restrictions and input protection.

bit0: Cancellation of protection for input

Select whether to check the input protection for the data protection key 2 on the group

(Note) The name of data protection key differs between machine tool builders. Refer to manuals issued by each machine tool builder for details.

0: Check 1: Not check

bit1: Cancellation of restriction on display

Select whether to display the group details screen even when a machine tool builder password is not entered

0: Not display 1: Display

bit4: BCD format

Display the data of the group details screen in BCD format. 0: Invalid 1: Valid

bit5: BIT format

Display the data of the group details screen in BIT format.

0: Învalid

1. Valid

bit6: HEX format (Hexadecimal format)

Display the data of the group details screen in HEX format. 0: Invalid 1: Valid

bit7: Sign (Decimal format only)

Select whether to display the data of the group details screen in a decimal format with/ without a sign.
0: With sign
1: Without sign

Set the magnification for the extended cyclic operation of the local station whose type corresponds to Ver.2.

"n" represents the expansion slot No.(n=1 to 3)

In represents the expansion stor to United to 3) Set "1" for the local station whose type corresponds to Ver.1. This function is out of specifications when the protocol version is Ver.1. The setting for the local station is fixed to "1".

---Master station---

Set to "0". ---Local/standby master station---Set to either of "1", "2", "4" or "8". Set to either of

--Setting range

0.1.2.4.8 (fold)

[#24007+40(n-1)] SLn conn modules Number of connected modules

Set the total number of remote stations, local stations, intelligent device stations, standby master station and reserved stations connected to the master station.

"n" represents the expansion slot No.(n=1 to 3)

Master station-

Set to either of "1" to "64". ---Local/standby master station-Set to "0".

---Setting range

0 to 64 (modules)

[#24008+40(n-1)] SLn num of retries Number of retries

Set the number of retries for when a communication error occurs

"n" represents the expansion slot No.(n=1 to 3)

---Master station---Set to either of "1" or "7"

--Local/standby master station---

Set to "0"

---Setting range 0 to 7 (times)

[#24009+40(n-1)] SLn auto ret mdls Number of automatic return modules

Set the total number of remote stations, local stations, intelligent device stations and standby master station that can be returned to system operation by a single link scan. "n" represents the expansion slot No.(n=1 to 3)

(Note) Refer to "CC-Link System Master/Local Module User's Manual (SH(NA)-080394E-E)" for the details of the functions.

---Master station---Set to either of "1" or "10"

---Local/standby master station--Set to "0".

---Setting range---0 to 10 (modules)

[#24010+40(n-1)(PR)] SLn STBY master st Standby master station

Set the station No. of the standby master station

"n" represents the expansion slot No.(n=1 to 3) Set "0" when no standby master station is provided.

--Master station-

Set a value within the setting range.

--Local/standby master station-

Set "0" (fixed) for the local station. Set "1" (fixed) for the standby station.

---Setting range-

0 to 64

[#24011+40(n-1)] SLn ope at NC down Operation at NC down

Set the data link status for when the master station failure occurs.

"n" represents the expansion slot No.(n=1 to 3)

0: Fixed to stop

(Note) Refer to "CC-Link System Master/Local Module User's Manual (SH(NA)-080394E-

E)" for the details of the functions.

---Master station---Set to "0" (fixed).

---Local/standby master station-Set to "0".

[#24012+40(n-1)] SLn scan mode Scan mode

Select whether to synchronize the link scan with one ladder scan.

"n" represents the expansion slot No.(n=1 to 3)

0: Fixed to synchronize --Master station-

Set to "0" (fixed)

--Local/standby master station---

Set to "0".

[#24013+40(n-1)] SLn delay time Delay time

```
Set the delay time
  " represents the expansion slot No.(n=1 to 3)
   0: (Fixed value)
    ---Master station-
   Set to "0" (fixed)
     --Local/standby master station---
   Set to "0".
```

[#24014+40(n-1)] SLn RX dev name Remote input (RX) refresh device na

```
Set the refresh device name of the remote input (RX) to be automatically refreshed.
(Example) X
 'n" represents the expansion slot No.(n=1 to 3)
Set "0" when no setting is required.
      --Master station-
    Set a value within the setting range.
    ---Local/standby master station---
Set a value within the setting range.
```

-Setting range 0,X,M,L,B,D,W,R

[#24015+40(n-1)] SLn RX dev No. Remote input (RX) refresh device No.

Set the refresh device No. of the remote input (RX) to be automatically refreshed. "n" represents the expansion slot No.(n=1 to 3)

(Note 1) When setting parameters in ALL.PRM with using the parameter input/output function, input the device No. of decimal digit.

(Example) When setting "X400" for the remote input (RX) refresh device No., input as follows; #24014+40(n-1): "X #24015+40(n-1): "1024"

(Note 2) When the refresh device name has been set, the refresh device No. will be '0". Confirm the refresh device No. after changing the refresh device name.

When specifying a bit device, set the address in increments of 16 points.

The operation will not be guaranteed unless the address is set in increments of 16 points. (Example) 1000

```

[#24026+40(n-1)(PR)] SLn Protocol Ver Protocol version

Select the CC-Link version mode that has been set to the slide switch SW1-2 on the CC-Link unit (HN566/HN567)

"n" represents the expansion slot No.(n=1 to 3)

0: Ver.2 1: Ver.1 Ver.2 mode has been set to SW1-2 as default.

---Master station--Set to "0" or "1".

---Local/standby master station---Set to "0" or "1".

CC-Link Parameters

[#24121+15(m-1)] CNm station type Station type

Set the type of the connected remote station, local station, intelligent device station and standby master station.

0: No setting
1: Ver.1 remote I/O station

2: Ver.1 remote device station
3: Ver.1 intelligent device station
4: Ver.2 remote device station

5: Ver.2 intelligent device station

"m" means the m-th connected station in ascending order of station No. (m= 1 to 64)

---Master station---Set to either of "0" to "5"

---Local/standby master station-Set to "0".

[#24122+15(m-1)] CNm extended cyc Extended cyclic setting

Select the magnification for the extended cycling operation of the connected remote, local and intelligent stations

Set "1" when the protocol version is Ver.1. Set "0" when no setting is required.

"m" means the m-th connected station in ascending order of station No. (m=1 to 64)

--Master station-

Set a value within the setting range.

---Local/standby master station-Set to "0".

---Setting range---0.1.2.4.8 (times)

[#24123+15(m-1)] CNm occ stations Number of occupied stations

Set the number of the occupied stations by the connected remote, local and intelligent etatione

Set 1 for 8 points I/O and 16 points I/O.

Set "0" when no setting is required

"m" means the m-th connected station in ascending order of station No. (m= 1 to 64) --Master station-

Set a value within the setting range.

---Local/standby master station-Set to "0".

--Setting range

0 to 4 (stations occupied)

[#24124+15(m-1)] CNm station No. Station No.

Set the station No. of the connected remote, local and intelligent stations Set "0" when no setting is required.

"m" means the m-th connected station in ascending order of station No. (m= 1 to 64) --Master station-

Set a value within the setting range.

---Local/standby master station-Set to "0".

---Setting range

0 to 64

[#24125+15(m-1)] CNm remote sta pt Remote station po

Select the number of points of the connected remote station

"m" means the m-th connected station in ascending order of station No. (m= 1 to 64) The details of setting values differ with each protocol version and station type.

Protocol: Ver.2 (station type: Ver.1, remote I/O station) 0: 0 point (reserved station)

1: 8 points

2: 8 points + 8 points reserved 3: 16 points

4: 32 points

- Setting $\dot{0}$ is valid only for the reserved station. When 0 is set for the other stations, the number of points will be 32 Set the value so that the total number of points of remote I/O stations connected in series will be multiple of 16.

(Example 1) 2 units of 8 points I/O: Set "1" for each
(Example 2) 3 units of 8 points I/O: Set "1" for the first and the second I/O, "2" for the third.

Protocol: Ver.2 (station type: Ver.1 except remote I/O station) 0: 0 point (reserved station)

1 to 4: Automatically calculated

0 point is valid only for the reserved station. When 0 is set for the other stations, the number of points will be automatically calculated.

- Unless 0 is set, the number of points will be automatically calculated with the number of occupied stations and the setting value of the extended cycling.

Protocol: Ver.1 (for all station types)

 0 to 4: Automatically calculated
 0 cannot be set even for the reserved station.
 - Automatically calculated with the setting value of the number of occupied stations. ---Master station--

Set a value corresponding to the protocol version and the station type.
---Local/standby master station---

Set to "0".

[#24126+15(m-1)] CNm set rsvd sta Reserved station

Set the reserved/error invalid station.

- "m" means the m-th connected station in ascending order of station No. (m= 1 to 64)
 - 0: No setting
 - 1: Reserved station
 - 2: Error invalid station
- (Note) Refer to "CC-Link System Master/Local Module User's Manual (SH(NA)-080394E-E)" for the details of the functions.
- ---Master station---Set either of "0" to "2".
- ---Local/standby master station---Set to "0".

[#24131+15(m-1)] CNm send size Send buffer size

Set the allocation of the buffer memory size to the local station, standby master station and

intelligent device station when in transient transmission means the m-th connected station in ascending order of station No. (m= 1 to 64)

Set "0" when no setting is required.

(Note) The total size of the send/receive buffers must be 4096 (words) or less.

-Master station Set a value within the setting range.

--Local/standby master station-

Set to "0".

---Setting range

0, 64 to 4096 (words)

[#24132+15(m-1)] CNm receive size Receive buffer size

Set the allocation of the buffer memory size to the local station, standby master station and intelligent device station when in transient transmission

"m" means the m-th connected station in ascending order of station No. (m= 1 to 64) Set "0" when no setting is required.

(Note) The total size of the send/receive buffers must be 4096 (words) or less.

-Master station

Set a value within the setting range.
---Local/standby master station---

Set to "0".

--Setting range 0, 64 to 4096 (words)

[#24133+15(m-1)] CNm auto bfr size Automatic update buffer size

Set the allocation of the buffer memory size to the local station, standby master station and intelligent device station when in transient transmission

"m" means the m-th connected station in ascending order of station No. (m= 1 to 64) Set "0" when no setting is required.

--Master station-

Set a value within the setting range. ---Local/standby master station-

Set to "0

[#10972] Complete CND num

Set the state values of PLC signal device which will be the condition for completing the machining when "#10814 OP-notice condition" is set to "1. Use the device status set to "#10971 Complete condition". Set the conditions of 16 bit data in HEX format.

---Setting range

Within 4 alphanumeric characters

【#12800(PR)】 chgauxno Auxiliary axis number

Set the axis No. to be controlled as auxiliary axis using auxiliary axis interface.

When "0" is set, the axis will not operate as auxiliary axis.

---Setting range

M730/M750/M730VS/M750VS/M730VW/M750VW: 0 to 6 M720/M720VS/M720VW/M70 Series/M70V Series: 0 to 4

[#12801(PR)] aux_station Number of indexing stations

Set the number of stations

For linear axis, this value is expressed by: number of divisions = number of stations -1. Setting "0" or "1" sets the number of stations to 2.

---Setting range--

0 to 360

[#12802(PR)] aux_Cont1 Control parameter 1

The bits that are not explained here must be set to "0".

Bit3:

Automatic reach signal isn't interlocked with the start signal.
 Automatic reach signal is interlocked with the start signal.

Bit4:

O: Automatic reach signal is turned ON again.
 Automatic reach signal isn't turned ON again.

Bit5:

0: Station No. Output within fixed position.

1: Station No. Constantly output.

bit9:

0: Rotation direction determined by operation control signal (DIR)

1: Rotation direction in the shortcut direction

bitE:

0: Rotation direction in operation control signal (DIR) or in the shortcut direction

1: Rotation direction in the arbitrary position command sign direction

bitF:

0: Stopper direction is in the positioning direction.

Stopper direction is in the sign direction of the stopper amount.

[#12803(PR)] aux_Cont2 Control parameter 2

The bits that are not explained here must be set to "0".

hit4

0: Uniform assignment 1: Arbitrary coordinate assignment

[#12804(PR)] aux_tleng Linear axis stroke length

Set the movement stroke length for linear axes.

(Note 1)Setting "0.000" causes an MCP alarm at the power ON. (Note 2)This parameter is meaningless at the arbitrary coordinate assignment or with the arbitrary coordinate designation method.

---Setting range---0.000 to 99999.999 (mm)

[#12805] aux_ST.offset Station offset

Set the distance (offset) from the reference position to station 1.

---Setting range

-99999.999 to 99999.999 (° or mm)

[#12810+10(n-1)] aux_Aspeedn Operation parameter group n Automatic operation speed

Set the feedrate during automatic operation when "operation parameter group n" is selected

"#12810 aux_Aspeed1" is regarded as the clamp value for the automatic operation speeds

and manual operation speeds of all operation groups.

A speed exceeding "aux_Aspeed1" cannot be commanded, even if it is set in a parameter.

(Note)Setting "0" causes an operation error at the "Operation start" signal's ON.

--Setting range

0 to 100000 (°/min or mm/min)

[#12811+10(n-1)] aux_Mspeedn Operation parameter group n Manual operation speed

Set the feedrate during manual operation or JOG operation when "operation parameter

group n" is selected.

(Note)Setting "0" causes an operation error at the "Operation start" signal's ON.

-Setting range

0 to 100000 (°/min or mm/min)

II Parameters

PLC Axis Indexing Parameters

[#12812+10(n-1)] aux_timen.1 Operation parameter group n Acceleration/deceleration time constant 1

Set the linear acceleration/deceleration time for "Operation parameter group 1 automatic operation speed" (clamp speed) when "operation parameter group n" is selected. When this is set with "Acceleration/deceleration time constant 2", S-pattern acceleration/ deceleration will be carried out. In this case, this parameter determines the acceleration/ deceleration will be carried out. In this case, this parameter determines the acceleration/ deceleration time of the linear part.

When operating at a speed less than the clamp speed, if "#1361 aux_acc" is set to "0", the axis will accelerate/decelerate with the time constant set in this parameter. If "#1361 aux_acc" is set to "1", the axis will accelerate/decelerate at the constant inclination determined by this parameter and "aux_Aspeed1".

Setting "0" cancels acceleration/deceleration: The axis will move with the time constant "0".

--Setting range---0 to 4000 (ms)

[#12813+10(n-1)] aux_timen.2 Operation parameter group n Acceleration/deceleration time constant 2

Set the total time of the non-linear parts in the S-pattern acceleration/deceleration. In the handle feed operation mode, this setting value is regarded as time constant for the linear acceleration/deceleration.

(Note)If this parameter is set to "0" while "#12818 aux_smgst1"is set to "F", an MCP alarm will occur.

---Setting range---0 to 4000 (ms)

[#12814+10(n-1)] aux_TLn Operation parameter group n Torque limit value

Set the motor output torque limit value when "operation parameter group n" is selected. At the default value, the torque is limited at the maximum torque of the motor specifications Set the default value when torque limit is not especially required.

In the stopper positioning operation mode, this will be regarded as torque limit value when positioning to the stopper starting coordinates.

---Setting range---0 to 500 (%)

[#12815+10(n-1)] aux_ODn Operation parameter group n Excessive error detection width

Set the excessive error detection width when "operation parameter group n" is selected. The excessive error alarm (S03 0052) will be detected when the position droop becomes larger than this setting value.

In the stopper positioning operation mode, this will be regarded as excessive error detection width when positioning to the stopper starting coordinates.

---Setting range---0 to 32767(° or mm)

[#12816+10(n-1)] aux_justn Operation parameter group n Set position output width

Set the tolerable value at which "set position reached" (JST) or "automatic set position reached" (JSTA) signal is output when "operation parameter group n" is selected. "Set position reached" (JST) indicates that the machine position is at any station. During automatic operation, "automatic set position reached" (JSTA) is also output under the same condition.

These signals will turn OFF when the machine position moves away from the station over this value.

---Setting range---0.000 to 99999.999(° or mm)

[#12817+10(n-1)] aux_nearn Operation parameter group n Near set position output width

Set the tolerable value at which "near set position" (NEAR) signal is output when "operation parameter group n" is selected.

"Near set position" (NEAR) indicates that the machine position is near any station position.

"Near set position" (NEAR) indicates that the machine position is near any station position. This value is generally set wider than the set position output width. During operations, this is related to the special commands when the station selection is set to "0".

---Setting range---0.000 to 99999.999(° or mm)

[#12818+10(n-1)(PR)] aux_smgstn Operation parameter group n Acceleration/Deceleration type

Select the acceleration/deceleration type when "operation parameter group n" is selected.

0, 1: Linear acceleration/deceleration F: S-pattern acceleration/deceleration

[#12850] aux_stpos2 Station 2 coordinate

Set the station 2 coordinate value when arbitrary coordinate assignment is selected. The station 1 coordinate value is fixed at "0.000" (machine coordinate zero point).

---Setting range----99999,999 to 99999,999(° or mm)

[#12851] aux_stpos3 Station 3 coordinate

Set the station 3 coordinate value when arbitrary coordinate assignment is selected.

The station 1 coordinate value is fixed at "0.000" (machine coordinate zero point).

---Setting range----99999.999 to 99999.999(° or mm)

[#12852] aux_stpos4 Station 4 coordinate

Set the station 4 coordinate value when arbitrary coordinate assignment is selected. The station 1 coordinate value is fixed at "0.000" (machine coordinate zero point).

---Setting range

-99999.999 to 99999.999(° or mm)

[#12853] aux_stpos5 Station 5 coordinate

Set the station 5 coordinate value when arbitrary coordinate assignment is selected. The station 1 coordinate value is fixed at "0.000" (machine coordinate zero point).

---Setting range

-99999.999 to 99999.999(° or mm)

[#12854] aux_stpos6 Station 6 coordinate

Set the station 6 coordinate value when arbitrary coordinate assignment is selected. The station 1 coordinate value is fixed at "0.000" (machine coordinate zero point).

---Setting range

-99999.999 to 99999.999(° or mm)

[#12855] aux_stpos7 Station 7 coordinate

Set the station 7 coordinate value when arbitrary coordinate assignment is selected. The station 1 coordinate value is fixed at "0.000" (machine coordinate zero point).

---Setting range

-99999.999 to 99999.999(° or mm)

[#12856] aux_stpos8 Station 8 coordinate

Set the station 8 coordinate value when arbitrary coordinate assignment is selected. The station 1 coordinate value is fixed at "0.000" (machine coordinate zero point).

---Setting range

-99999 999 to 99999 999(° or mm)

[#12857] aux_stpos9 Station 9 coordinate

Set the coordinate of each station when arbitrary coordinate assignment is selected. The station 1 coordinate value is fixed at "0.000" (machine coordinate zero point).

---Setting range

-99999.999 to 99999.999(° or mm)

[#12858] aux_stpos10 Station 10 coordinate

Set the station 10 coordinate value when arbitrary coordinate assignment is selected. The station 1 coordinate value is fixed at "0.000" (machine coordinate zero point).

---Setting range

-99999.999 to 99999.999(° or mm)

[#12859] aux_stpos11 Station 11 coordinate

Set the station 11 coordinate value when arbitrary coordinate assignment is selected. The station 1 coordinate value is fixed at "0.000" (machine coordinate zero point).

---Setting range

-99999.999 to 99999.999(° or mm)

[#12860] aux_stpos12 Station 12 coordinate

Set the station 12 coordinate value when arbitrary coordinate assignment is selected. The station 1 coordinate value is fixed at "0.000" (machine coordinate zero point).

---Setting range

-99999.999 to 99999.999(° or mm)

[#12861] aux_stpos13 Station 13 coordinate

Set the station 13 coordinate value when arbitrary coordinate assignment is selected. The station 1 coordinate value is fixed at "0.000" (machine coordinate zero point).

---Setting range

-99999.999 to 99999.999(° or mm)

[#12862] aux_stpos14 Station 14 coordinate

Set the station 14 coordinate value when arbitrary coordinate assignment is selected. The station 1 coordinate value is fixed at "0.000" (machine coordinate zero point).

---Setting range

-99999.999 to 99999.999(° or mm)

[#12863] aux_stpos15 Station 15 coordinate

Set the station 15 coordinate value when arbitrary coordinate assignment is selected. The station 1 coordinate value is fixed at "0.000" (machine coordinate zero point).

---Setting range--99999.999 to 99999.999(° or mm)

[#12864] aux_stpos16 Station 16 coordinate

Set the station 16 coordinate value when arbitrary coordinate assignment is selected. The station 1 coordinate value is fixed at "0.000" (machine coordinate zero point).

---Setting range

[#12865] aux_stpos17 Station 17 coordinate

Set the station 17 coordinate value when arbitrary coordinate assignment is selected. The station 1 coordinate value is fixed at "0.000" (machine coordinate zero point).

---Setting range

-99999.999 to 99999.999(° or mm)

[#12866] aux_stpos18 Station 18 coordinate

Set the station 18 coordinate value when arbitrary coordinate assignment is selected. The station 1 coordinate value is fixed at "0.000" (machine coordinate zero point).

---Setting range

-99999.999 to 99999.999(° or mm)

[#12867] aux_stpos19 Station 19 coordinate

Set the station 19 coordinate value when arbitrary coordinate assignment is selected. The station 1 coordinate value is fixed at "0.000" (machine coordinate zero point).

---Setting range

-99999.999 to 99999.999(° or mm)

[#12868] aux_stpos20 Station 20 coordinate

Set the station 20 coordinate value when arbitrary coordinate assignment is selected. The station 1 coordinate value is fixed at "0.000" (machine coordinate zero point).

---Setting range-

-99999.999 to 99999.999(° or mm)

[#12870] aux_PSWcheck PSW detection method

Select the criterion for the output of position switches 1 to 15.

bit0 to E correspond to position switches 1 to 15.

0: Judged by the machine position of the command system

1: Judged by the machine FB position (actual position).

(Note) The bits that are not explained here must be set to "0".

[#12871] aux_PSW1dog1 PSW1 area setting 1

Set "PSW1 area setting" 1 and 2 to specify the area where the position switch 1 will turn ON when the machine is positioned.

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the position switch operation.
For rotary axes, the output turns ON in the area excluding 0.000 degree.

---Setting range -99999.999 to 99999.999(° or mm)

[#12872] aux_PSW1dog2 PSW1 area setting 2

Set "PSW1 area setting" 1 and 2 to specify the area where the position switch 1 will turn ON when the machine is positioned.

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the position switch operation.
For rotary axes, the output turns ON in the area excluding 0.000 degree.

---Setting range-

-99999.999 to 99999.999(° or mm)

[#12873] aux_PSW2dog1 PSW2 area setting 1

Set "PSW2 area setting" 1 and 2 to specify the area where the position switch 2 will turn ON when the machine is positioned.

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the position switch operation.
For rotary axes, the output turns ON in the area excluding 0.000 degree.

---Setting range -99999.999 to 99999.999(° or mm)

[#12874] aux_PSW2dog2 PSW2 area setting 2

Set "PSW2 area setting" 1 and 2 to specify the area where the position switch 2 will turn ON when the machine is positioned.

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the

position switch operation.
For rotary axes, the output turns ON in the area excluding 0.000 degree.

-99999.999 to 99999.999(° or mm)

[#12875] aux_PSW3dog1 PSW3 area setting 1

Set "PSW3 area setting" 1 and 2 to specify the area where the position switch 3 will turn ON when the machine is positioned.

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the position switch operation.
For rotary axes, the output turns ON in the area excluding 0.000 degree.

---Setting range

---Setting range-

[#12876] aux_PSW3dog2 PSW3 area setting 2

Set "PSW3 area setting" 1 and 2 to specify the area where the position switch 3 will turn ON en the machine is positioned

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the

position switch operation.
For rotary axes, the output turns ON in the area excluding 0.000 degree.

---Setting range

-99999.999 to 99999.999(° or mm)

[#12877] aux_PSW4dog1 PSW4 area setting 1

Set "PSW4 area setting" 1 and 2 to specify the area where the position switch 4 will turn ON when the machine is positioned.

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the position switch operation.
For rotary axes, the output turns ON in the area excluding 0.000 degree.

---Setting range

-99999.999 to 99999.999(° or mm)

[#12878] aux_PSW4dog2 PSW4 area setting 2

Set "PSW4 area setting" 1 and 2 to specify the area where the position switch 4 will turn ON when the machine is positioned.

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the position switch operation.
For rotary axes, the output turns ON in the area excluding 0.000 degree.

---Setting range -99999.999 to 99999.999(° or mm)

【#12879】 aux_PSW5dog1 PSW5 area setting 1

Set "PSW5 area setting" 1 and 2 to specify the area where the position switch 5 will turn ON when the machine is positioned.

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the

position switch operation.
For rotary axes, the output turns ON in the area excluding 0.000 degree.

---Setting range

-99999.999 to 99999.999(° or mm)

[#12880] aux_PSW5dog2 PSW5 area setting 2

Set "PSW5 area setting" 1 and 2 to specify the area where the position switch 5 will turn ON when the machine is positioned.

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the position switch operation.
For rotary axes, the output turns ON in the area excluding 0.000 degree.

---Setting range

-99999.999 to 99999.999(° or mm)

[#12881] aux_PSW6dog1 PSW6 area setting 1

Set "PSW6 area setting" 1 and 2 to specify the area where the position switch 6 will turn ON when the machine is positioned.

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the

position switch operation.
For rotary axes, the output turns ON in the area excluding 0.000 degree.

---Setting range-

-99999.999 to 99999.999(° or mm)

[#12882] aux_PSW6dog2 PSW6 area setting 2

Set "PSW6 area setting" 1 and 2 to specify the area where the position switch 6 will turn ON when the machine is positioned. Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the

position switch operation

For rotary axes, the output turns ON in the area excluding 0.000 degree.

---Setting range -99999.999 to 99999.999(° or mm)

[#12883] aux_PSW7dog1 PSW7 area setting 1

Set "PSW7 area setting" 1 and 2 to specify the area where the position switch 7 will turn ON when the machine is positioned.

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the position switch operation

For rotary axes, the output turns ON in the area excluding 0.000 degree.

---Setting range-

-99999.999 to 99999.999(° or mm)

[#12884] aux_PSW7dog2 PSW7 area setting 2

Set "PSW7 area setting" 1 and 2 to specify the area where the position switch 7 will turn ON when the machine is positioned.

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the

position switch operation.
For rotary axes, the output turns ON in the area excluding 0.000 degree.

---Setting range

[#12885] aux_PSW8dog1 PSW8 area setting 1

Set "PSW8 area setting" 1 and 2 to specify the area where the position switch 8 will turn ON en the machine is positioned.

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the

position switch operation.
For rotary axes, the output turns ON in the area excluding 0.000 degree.

---Setting range

-99999 999 to 99999 999/° or mm)

[#12886] aux_PSW8dog2 PSW8 area setting 2

Set "PSW8 area setting" 1 and 2 to specify the area where the position switch 8 will turn ON when the machine is positioned.

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the position switch operation.
For rotary axes, the output turns ON in the area excluding 0.000 degree.

---Setting range

-99999.999 to 99999.999(° or mm)

[#12887] aux_PSW9dog1 PSW9 area setting 1

Set "PSW9 area setting" 1 and 2 to specify the area where the position switch 9 will turn ON when the machine is positioned.

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the

position switch operation.
For rotary axes, the output turns ON in the area excluding 0.000 degree.

---Setting range

-99999.999 to 99999.999(° or mm)

【#12888】 aux_PSW9dog2 PSW9 area setting 2

Set "PSW9 area setting" 1 and 2 to specify the area where the position switch 9 will turn ON when the machine is positioned.

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the

position switch operation.
For rotary axes, the output turns ON in the area excluding 0.000 degree.

---Setting range-

-99999.999 to 99999.999(° or mm)

[#12889] aux_PSW10dog1 PSW10 area setting 1

Set "PSW10 area setting" 1 and 2 to specify the area where the position switch 10 will turn ON when the machine is positioned

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the position switch operation.
For rotary axes, the output turns ON in the area excluding 0.000 degree.

---Setting range

-99999.999 to 99999.999(° or mm)

[#12890] aux_PSW10dog2 PSW10 area setting 2

Set "PSW10 area setting" 1 and 2 to specify the area where the position switch 10 will turn ON when the machine is positioned

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the position switch operation.
For rotary axes, the output turns ON in the area excluding 0.000 degree.

---Setting range-

-99999.999 to 99999.999(° or mm)

[#12891] aux_PSW11dog1 PSW11 area setting 1

Set "PSW11 area setting" 1 and 2 to specify the area where the position switch 11 will turn ON when the machine is positioned

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the position switch operation.

For rotary axes, the output turns ON in the area excluding 0.000 degree.

---Setting range

-99999.999 to 99999.999(° or mm)

[#12892] aux_PSW11dog2 PSW11 area setting 2

Set "PSW11 area setting" 1 and 2 to specify the area where the position switch 11 will turn ON when the machine is positioned

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the position switch operation.

For rotary axes, the output turns ON in the area excluding 0.000 degree.

---Setting range-

-99999.999 to 99999.999(° or mm)

[#12893] aux_PSW12dog1 PSW12 area setting 1

Set "PSW12 area setting" 1 and 2 to specify the area where the position switch 12 will turn ON when the machine is positioned

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the position switch operation.

For rotary axes, the output turns ON in the area excluding 0.000 degree.

---Setting range

[#12894] aux_PSW12dog2 PSW12 area setting 2

Set "PSW12 area setting" 1 and 2 to specify the area where the position switch 12 will turn ON when the machine is positioned

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the position switch operation.

For rotary axes, the output turns ON in the area excluding 0.000 degree.

---Setting range

-99999.999 to 99999.999(° or mm)

[#12895] aux_PSW13dog1 PSW13 area setting 1

Set "PSW13 area setting" 1 and 2 to specify the area where the position switch 13 will turn ON when the machine is positioned

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the

position switch operation.
For rotary axes, the output turns ON in the area excluding 0.000 degree.

---Setting range

-99999.999 to 99999.999(° or mm)

[#12896] aux_PSW13dog2 PSW13 area setting 2

Set "PSW13 area setting" 1 and 2 to specify the area where the position switch 13 will turn ON when the machine is positioned.

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the position switch operation.

For rotary axes, the output turns ON in the area excluding 0.000 degree.

---Setting range -99999.999 to 99999.999(° or mm)

[#12897] aux_PSW14dog1 PSW14 area setting 1

Set "PSW14 area setting" 1 and 2 to specify the area where the position switch 14 will turn ON when the machine is positioned

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the

position switch operation.
For rotary axes, the output turns ON in the area excluding 0.000 degree.

---Setting range

-99999.999 to 99999.999(° or mm)

[#12898] aux_PSW14dog2 PSW14 area setting 2

Set "PSW14 area setting" 1 and 2 to specify the area where the position switch 14 will turn ON when the machine is positioned

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the

position switch operation.
For rotary axes, the output turns ON in the area excluding 0.000 degree.

---Setting range

-99999.999 to 99999.999(° or mm)

[#12899] aux_PSW15dog1 PSW15 area setting 1

Set "PSW15 area setting" 1 and 2 to specify the area where the position switch 15 will turn ON when the machine is positioned

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the position switch operation.
For rotary axes, the output turns ON in the area excluding 0.000 degree.

---Setting range--99999.999 to 99999.999(° or mm)

[#12900] aux_PSW15dog2 PSW15 area setting 2

Set "PSW15 area setting" 1 and 2 to specify the area where the position switch 15 will turn ON when the machine is positioned

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the position switch operation.

For rotary axes, the output turns ON in the area excluding 0.000 degree.

---Setting range

-99999.999 to 99999.999(° or mm)

[#12910] aux_push Stopper amount

Set the command stroke of the stopper operation in the stopper positioning.

---Setting range-

0.000 to 359.999(° or mm)

[#12911] aux_pusht1 Stopper standby time

Set the standby time from the stopper starting coordinate positioning to the stopper operation start in the stopper positioning.

---Setting range-

0 to 9999(ms)

[#12912] aux_pusht2 Stopper torque release time

Set the time from the completion of the stopper operation to the changeover of the stopper torque in the stopper positioning.

---Setting range

0 to 9999(ms)

II Parameters PLC Axis Indexing Parameters

[#12913] aux_pusht3 Set position signal output delay time

Set the time from the completion of the stopper operation to the output of the "automatic set position reached" (JSTA), "set position reached" (JST) or "near set position" (NEAR) signal in the stopper positioning.

---Setting range---0 to 9999(ms)

	X18A8	SPSYN11	In spindle synchronization 1st-Spindle
	X18A9	FSPRV1	Spindle rotation speed synchronization completion 1st-Spindle

Device	Abbrev.	Signal name
X18AA	FSPPH1	Spindle phase synchronization completion 1st-Spindle
X18AB	SPSYN21	In spindle synchronization 2 1st-Spindle
X18AE	SPSYN3	In tool spindle synchronization II 1st-spindle
X18B3	PHOVR	Hob axis delay excess 1st-spindle
X18B5	EXOFN	In spindle holding force up 1st-spindle
X18E0	SUPP2	
		Spindle speed upper limit over 2nd-Spindle
X18E1	SLOW2	Spindle speed lower limit over 2nd-Spindle
X18E2	SIGE2	S command gear No. illegal 2nd-Spindle
X18E3	SOVE2	S command max./min. command value over 2nd-Spindle
X18E4	SNGE2	S command no gear selected 2nd-Spindle
X18E5	GR12	Spindle gear shift command 1 2nd-Spindle
X18E6	GR22	Spindle gear shift command 2 2nd-Spindle
X18E7	OTTLE	(Always "0") 2nd-Spindle
	OB 42O2	
X18E8	ORA202	Spindle 2nd in-position 2nd-Spindle
X18E9	CDO2	Current detection 2nd-Spindle
X18EA	VRO2	Speed detection 2nd-Spindle
X18EB	FLO2	In spindle alarm 2nd-Spindle
X18EC	ZSO2	Zero speed 2nd-Spindle
X18ED	USO2	Spindle up-to-speed 2nd-Spindle
X18EE	ORAO2	Spindle in-position 2nd-Spindle
X18EF	LCSA2	In L coil selection 2nd-Spindle
X18F0	SMA2	Spindle ready-ON 2nd-Spindle
X18F1	SSA2	Spindle servo-ON 2nd-Spindle
X18F2	SENG2	In spindle emergency stop 2nd-Spindle
X18F3	SSRN2	In spindle forward run 2nd-Spindle
X18F4	SSRI2	In spindle reverse run 2nd-Spindle
X18F5	SZPH2	Z-phase passed 2nd-Spindle
X18F6	SIMP2	Position loop in-position 2nd-Spindle
X18F7	STLQ2	In spindle torque limit 2nd-Spindle
X18F8	M1SEL2	In motor 1 selection 2nd-Spindle
X18F9	M2SEL2	In motor 2 selection 2nd-Spindle
X18FD	SD22	Speed detection 2 2nd-Spindle
X18FE	MCSA1	In M coil selection 2nd-Spindle
	WOOAT	
X18FF		Index positioning completion 2nd-Spindle
X1900	ENB2	Spindle enable 2nd-spindle
X1908	SPSYN12	In spindle synchronization 2nd-Spindle
X1909	FSPRV2	Spindle rotation speed synchronization completion 2nd-Spindle
X190A	FSPPH2	Spindle phase synchronization completion 2nd-Spindle
X190A X190B		Spindle phase synchronization completion 2nd-Spindle In spindle synchronization 2 2nd-Spindle
X190B	SPSYN22	In spindle synchronization 2 2nd-Spindle

Device	Abbrev.	Signal name
X196A	FSPPH3	Spindle phase synchronization completion 3rd-Spindle
X196B	SPSYN23	In spindle synchronization 2 3rd-Spindle
X196E	SPSYN3	In tool spindle synchronization II 3rd-spindle
X1973	PHOVR	Hob axis delay excess 3rd-spindle
X1975	EXOFN	In spindle holding force up 3rd-spindle
X19A0	SUPP4	Spindle speed upper limit over 4th-Spindle
X19A1	SLOW4	Spindle speed lower limit over 4th-Spindle
X19A2	SIGE4	S command gear No. illegal 4th-Spindle
X19A3	SOVE4	S command max./min. command value over 4th-Spindle
X19A4	SNGE4	S command no gear selected 4th-Spindle
X19A5	GR14	Spindle gear shift command 1 4th-Spindle
X19A6	GR24	Spindle gear shift command 2 4th-Spindle
X19A7		(Always "0") 4th-Spindle
X19A8	ORA2O4	Spindle 2nd in-position 4th-Spindle
X19A9	CDO4	Current detection 4th-Spindle
X19AA	VRO4	Speed detection 4th-Spindle
X19AB	FLO4	In spindle alarm 4th-Spindle
X19AC	ZSO4	Zero speed 4th-Spindle
X19AD	USO4	Spindle up-to-speed 4th-Spindle
X19AE	ORAO4	Spindle in-position 4th-Spindle
X19AF	LCSA4	In L coil selection 4th-Spindle
X19B0	SMA4	Spindle ready-ON 4th-Spindle
X19B1	SSA4	Spindle servo-ON 4th-Spindle
X19B2	SENG4	In spindle emergency stop 4th-Spindle
X19B3	SSRN4	In spindle forward run 4th-Spindle
X19B4	SSRI4	In spindle reverse run 4th-Spindle
X19B5	SZPH4	Z-phase passed 4th-Spindle
X19B6	SIMP4	Position loop in-position 4th-Spindle
X19B7	STLQ4	In spindle torque limit 4th-Spindle
X19B8	M1SEL4	In motor 1 selection 4th-Spindle
X19B9	M2SEL4	In motor 2 selection 4th-Spindle
X19BD	SD24	Speed detection 2 4th-Spindle
X19BE	MCSA1	In M coil selection 4th-Spindle
X19BF		Index positioning completion 4th-Spindle
X19C0	ENB4	Spindle enable 4th-spindle
X19C8	SPSYN14	
		In spindle synchronization 4th-Spindle
X19C9	FSPRV4	Spindle rotation speed synchronization completion 4th-Spindle
X19CA	FSPPH4	Spindle phase synchronization completion 4th-Spindle
X19CA X19CB	FSPPH4 SPSYN24	Spindle phase synchronization completion 4th-Spindle In spindle synchronization 2 4th-Spindle
	SPSYN24	In spindle synchronization 2 4th-Spindle
X19CB X19CE	SPSYN24 SPSYN3	In spindle synchronization 2 4th-Spindle In tool spindle synchronization II 4th-spindle

		Bit Type Input Signals (CNC->PLC)
Device	Abbrev.	Signal name
X1A2C	SPCMP1	Chuck close confirmation 5th-spindle
X1A2E	SPSYN3	In tool spindle synchronization II 5th-spindle
X1A33	PHOVR	Hob axis delay excess 5th-spindle
X1A35	EXOFN	In spindle holding force up 5th-spindle
X1A60	SUPP6	Spindle speed upper limit over 6th-Spindle
X1A61	SLOW6	Spindle speed lower limit over 6th-Spindle
X1A62	SIGE6	S command gear No. illegal 6th-Spindle
X1A63	SOVE6	S command max./min. command value over 6th-Spindle
X1A64	SNGE6	S command no gear selected 6th-Spindle
X1A65	GR16	Spindle gear shift command 1 6th-Spindle
X1A66	GR26	Spindle gear shift command 2 6th-Spindle
X1A68	ORA2O6	Spindle 2nd in-position 6th-Spindle
X1A69	CDO6	Current detection 6th-Spindle
X1A6A	VRO6	Speed detection 6th-Spindle
X1A6B	FLO6	In spindle alarm 6th-Spindle
X1A6C	ZSO6	Zero speed 6th-Spindle
X1A6D	USO6	Spindle up-to-speed 6th-Spindle
X1A6E	ORAO6	Spindle in-position 6th-Spindle
X1A6F	LCSA6	In L coil selection 6th-Spindle
X1A70	SMA6	Spindle ready-ON 6th-Spindle
X1A72	SENG6	In spindle emergency stop 6th-Spindle
X1A73	SSRN6	In spindle forward run 6th-Spindle
X1A74	SSRI6	In spindle reverse run 6th-Spindle
X1A74 X1A75	SZPH6	Z-phase passed 6th-Spindle
X1A75	SIMP6	Position loop in-position 6th-Spindle
X1A76 X1A77	STLQ6	In spindle torque limit 6th-Spindle
X1A77 X1A78	M1SEL6	
		In motor 1 selection 6th-Spindle In motor 2 selection 6th-Spindle
X1A79	M2SEL6	
X1A7D	SD2n	Speed detection 2 6th-Spindle
X1A7E	MCSA1	In M coil selection 6th-Spindle
X1A7F		Index positioning completion 6th-Spindle
X1A80	ENB1	Spindle enable 6th-spindle
X1A88	SPSYN11	In spindle synchronization 6th-Spindle
X1A89	FSPRV1	Spindle rotation speed synchronization completion 6th-Spindle
X1A8A	FSPPH1	Spindle phase synchronization completion 6th-Spindle
X1A8B	SPSYN21	In spindle synchronization 2 6th-Spindle
X1A8C	SPCMP1	Chuck close confirmation 6th-spindle
X1A8E	SPSYN3	In tool spindle synchronization II 5th-spindle
X1A93	PHOVR	Hob axis delay excess 6th-spindle
X1A95	EXOFN	In spindle holding force up 6th-spindle

2. Data Type Input Signals (CNC->PLC)

(Note) Signals marked with "▲" are prepared for a specific machine tool builder.

Device	Abbrev.	Signal name
R0	Al1	Analog input 1
R1	AI2	Analog input 2
R2	AI3	Analog input 3
R3	Al4	Analog input 4
R4	AI5	Analog input 5
R5	Al6	Analog input 6
R6	AI7	Analog input 7
R7	AI8	Analog input 8
R8		KEY IN 1
R9		(Full key)
R11		Clock data Month/Year
R12		Clock data Hour/Date
R13		Clock data Second/Minute
R16		CNC software version code
R17		CNC software version code
R18		CNC software version code
R19		CNC software version code
R25		PLC high-speed process time
R26		Turret interference check status
R27		Interference object alarm information
R30		Remote program input error information ▲
R31		MELDAS-NET output
R37		PLC window parameter status
R56		Battery drop cause
R57		Temperature warning cause
R58		5V/24V error cause
R59 R60		Control unit temperature 2 Control unit temperature
R62		Tool ID communication error information
R68		PLC main scan time
R69		Emergency stop cause
R70		DIO card information
		Ball screw thermal displacement compensation
R72		Compensation amount 1st axis
		Ball screw thermal displacement compensation
R73		Compensation amount 2nd axis
		Ball screw thermal displacement compensation
R74		Compensation amount 3rd axis
		Ball screw thermal displacement compensation
R75		Compensation amount 4th axis
R83		Modbus/RTU received packet monitor ▲
R84		Modbus/RTU communication error monitor ▲
R85		Modal task data update cycle
R90		Modbus/TCP connection request monitor ▲
R91		Modbus/TCP number of connections monitor ▲
R92		Modbus/TCP received packet monitor ▲
R93		Modbus/TCP communication error monitor ▲
R94		Modbus/TCP protocol error packet monitor ▲
R96	SMODEN	Speed monitor door open possible
R97	SODIO	Safety observation I/O signal status
R98	SOPFN	Multi-step speed monitor selected speed output ▲
R168		PLC axis alarm/warning No. 1st axis
R169		PLC axis alarm/warning No. 2nd axis
R170		PLC axis alarm/warning No. 3rd axis
R171		PLC axis alarm/warning No. 4th axis
R172		PLC axis alarm/warning No. 5th axis
R173 R210		PLC axis alarm/warning No. 6th axis
R500		Displayed screen No. External search status \$1
R504		M code data 1 \$1
R504		
R505		M code data 1 \$1 M code data 2 \$1
R506		M code data 2 \$1
R507		M code data 2 \$1 M code data 3 \$1
R508		
		M code data 3 \$1
R510		M code data 4 \$1
R511		M code data 4 \$1
R512		S code data 1 \$1
R513		S code data 1 \$1
R514		S code data 2 \$1
R515		S code data 2 \$1
R516	l	S code data 3 \$1

		Data Type Input Signals (CNC->PLC)
Device	Abbrev.	Signal name
R517		S code data 3 \$1
R518		S code data 4 \$1
R519		S code data 4 \$1
R536		T code data 1 \$1
R537		T code data 1 \$1
R538		T code data 2 \$1
R539		T code data 2 \$1
R540		T code data 3 \$1
R541		T code data 3 \$1
R542		T code data 4 \$1
R543		T code data 4 \$1
R544		2nd M function data 1 \$1
R545		2nd M function data 1 \$1
R546		2nd M function data 2 \$1
R547		2nd M function data 2 \$1
R548		2nd M function data 3 \$1
R549		2nd M function data 3 \$1
R550		2nd M function data 4 \$1
R551		2nd M function data 4 \$1
R554		Chopping error No. \$1
R555		Manual measurement status \$1
R564		Load monitor warning axis \$1 ▲
R565		Load monitor alarm axis \$1 ▲
R566		Load monitor data alarm information \$1 ▲
R567	<u> </u>	Group in tool life management \$1
R571		Adaptive control override \$1 ▲
R572		CNC completion standby status \$1
R573		(Blank) \$1
R574		In initialization \$1
R575		Initialization incompletion \$1
R576		Reference position adjustment value parameter setting completed \$1
R578		Measurement tool tip point No. \$1 ▲
R580		Near reference position (per reference position) \$1
R581		Near reference position (per reference position) \$1
R582		Presetter contact \$1
R583		Presetter interlock \$1
R584		Area signal X axis on/off \$1 ▲
R585		Area signal Z axis on/off \$1 ▲
R586		Area signal X axis (-) on/off \$1 ▲
R587		Area signal Z axis (-) on/off \$1 ▲
R588		Takt time (ms) \$1 (L)
R589		Takt time (ms) \$1 (H)
R590		Takt time (min) \$1 (L)
R591		Takt time (min) \$1 (H)
R596		Load monitor status (1) \$1 ▲
R597		Load monitor status (2) \$1 ▲
R598		Load monitor status (3) \$1 ▲
R599		Load monitor status (4) \$1 ▲
R600		Load monitor status (5) \$1 ▲
R601		Load monitor status (6) \$1 ▲
R602		Load monitor status (7) \$1 ▲
R603		Load monitor status (8) \$1 ▲
R604		Load monitor status (9) \$1 ▲
R605		Load monitor status (10) \$1 ▲
R606		No. of work machining (current value) \$1
R607		No. of work machining (current value) \$1
R628		Tool life usage data \$1
R629		Tool life usage data \$1
R630		Number of registered tool life control tools \$1
R636		Circular feed in manual mode current position X \$1
R637		
_		Circular feed in manual mode current position X \$1
R638		Circular feed in manual mode current position X \$1
R639		Circular feed in manual mode current position X \$1
R640		Circular feed in manual mode current position Y \$1
R641		Circular feed in manual mode current position Y \$1
R642	-	Circular feed in manual mode current position Y \$1
R643		Circular feed in manual mode current position Y \$1
R646		Machining mode state \$1 ▲
R652	TLMSLNO11	Censor ON Tool length compensation No. (BCD output) \$1 ▲
	TLMSWN01	
R653		Censor ON Tool wear compensation No. (BCD output) \$1 ▲
-	1	Companyation data undata Taal langth assessment No. (DOD)

Data Type Input Signals (CNC->PLC)		
Device	Abbrev.	Signal name
R1155		Manual measurement status \$4
R1164		Load monitor warning axis \$4 ▲
R1165		Load monitor alarm axis \$4 ▲
R1166		Load monitor data alarm information \$4 ▲
R1167		Group in tool life management \$4
R1171		Adaptive control override \$4 \(\)
R1172		CNC completion standby status \$4
R1173		(Blank) \$4
R1174		In initialization \$4
R1175		Initialization incompletion \$4
R1176		Reference position adjustment value parameter setting completed \$4
R1178		Measurement tool tip point No. \$4 ▲
R1180		Near reference position (per reference position) \$4
R1181		Near reference position (per reference position) \$4
R1182		Presetter contact \$4
R1183		Presetter interlock \$4
R1184		Area signal X axis on/off \$4 ▲
R1185		Area signal Z axis on/off \$4 ▲
R1186		Area signal X axis (-) on/off \$4 ▲
R1187		Area signal Z axis (-) on/off \$4 ▲
R1188		Takt time (ms) \$4 (L)
R1189		Takt time (ms) \$4 (H)
R1190		Takt time (min) \$4 (L)
R1191		Takt time (min) \$4 (H)
R1196		Load monitor status (1) \$4
R1197		Load monitor status (2) \$4
R1198		Load monitor status (3) \$4
R1199		Load monitor status (4) \$4
R1200		Load monitor status (5) \$4
R1201		Load monitor status (6) \$4
R1202		Load monitor status (7) \$4
R1203		Load monitor status (8) \$4
R1204		Load monitor status (9) \$4
R1205		Load monitor status (10) \$4
R1206		No. of work machining (current value) \$4
R1207		No. of work machining (current value) \$4
R1228		Tool life usage data \$4
R1229		Tool life usage data \$4
R1230		Number of registered tool life control tools \$4
R1236		Circular feed in manual mode current position X \$4
R1237		Circular feed in manual mode current position X \$4
R1238		Circular feed in manual mode current position X \$4
R1239		Circular feed in manual mode current position X \$4
R1240		Circular feed in manual mode current position Y \$4
R1241		Circular feed in manual mode current position Y \$4
R1242		Circular feed in manual mode current position Y \$4
R1243		Circular feed in manual mode current position Y \$4
R1246		Machining mode state \$4 ▲
R1252	TLMSLNO14	Censor ON Tool length compensation No. (BCD output) \$4 ▲

		Bit Type Output Signals (PLC->CNC)
Device	Abbrev.	Signal name
Y1972	SPSDR3	Spindle synchronous rotation direction 3rd-Spindle
Y1973	SSPHM3	Phase shift calculation request 3rd-Spindle
Y1974	SSPHF3	Phase offset request 3rd-Spindle
Y1975	SPDRPO3	Error temporary cancel 3rd-Spindle
Y1978	SPSYC3	Spindle synchronization/superimposition cancel 3rd-Spindle
	SPCMPC3	
Y1979		Chuck close 3rd-Spindle
Y19A5	GFIN4	Gear shift completion 4th-Spindle
Y19A8	SP14	Spindle override code 1 4th-Spindle
Y19A9	SP24	Spindle override code 2 4th-Spindle
Y19AA	SP44	Spindle override code 4 4th-Spindle
Y19AF	SPS4	Spindle override method selection 4th-Spindle
Y19B0	GI14	Spindle gear selection code 1 4th-Spindle
Y19B1	GI24	Spindle gear selection code 2 4th-Spindle
Y19B3	EXOBS	Spindle holding force up 4th-spindle
Y19B4	SSTP4	Spindle stop 4th-Spindle
	SSFT4	
Y19B5		Spindle gear shift 4th-Spindle
Y19B6	SORC4	Spindle orientation 4th-Spindle
Y19B7		Spindle command invalid 4th-Spindle
Y19B8	SRN4	Spindle forward run start 4th-Spindle
Y19B9	SRI4	Spindle reverse run start 4th-Spindle
Y19BA	TL14	Spindle torque limit 1 4th-Spindle
Y19BB	TL24	Torque limit 2 4th-Spindle
Y19BC	WRN4	Spindle forward run index 4th-Spindle
Y19BD	WRI4	Spindle roverse run index 4th-Spindle
Y19BE	ORC4	Spindle orientation command 4th-Spindle
Y19BF	LRSL4	L coil selection 4th-Spindle
Y19C2		Spindle position control (C axis)cutting gain L 4th-Spindle
Y19C3		Spindle position control (C axis)cutting gain H 4th-Spindle
Y19C6	LRSM4	In M coil selection 4th-Spindle
Y19C8	SWS4	Spindle selection 4th-Spindle
X19CC	SPCMP4	Chuck close confirmation 4th-spindle
Y19CF	MPCSL4	PLC coil changeover 4th-Spindle
Y19CF	SPSYC4	Spindle synchronization/superimposition cancel 4th-Spindle
Y19D0	SPSY4	Spindle synchronization 4th-Spindle
Y19D1		
	SPPHS4	Spindle phase synchronization 4th-Spindle

		Data Type Output Signals (PLC->CNC)
Device	Abbrev.	Signal name
R3028		Mechanical axis specifications 1st rotary axis angle \$3 (L)
R3029		Mechanical axis specifications 1st rotary axis angle \$3 (H)
R3030		Mechanical axis specifications 2nd rotary axis angle \$3 (L)
R3031		Mechanical axis specifications 2nd rotary axis angle \$3 (H)
R3036		Circular feed in manual mode Operation mode data \$3 (L)
R3037		Circular feed in manual mode Operation mode data \$3 (H)
R3038		Circular feed in manual mode Part system designation \$3
R3040		Circular feed in manual mode Horizontal axis designation \$3
R3041		Circular feed in manual mode Vertical axis designation \$3
R3044		Circular feed in manual mode Basic point X data \$3 (L)
R3045 R3048		Circular feed in manual mode Basic point X data \$3 (H) Circular feed in manual mode Basic point Y data \$3 (L)
R3049		Circular feed in manual mode Basic point Y data \$3 (L) Circular feed in manual mode Basic point Y data \$3 (H)
R3052		Circular feed in manual mode Basic point 1 data \$3 (h) Circular feed in manual mode Travel range X+ data \$3 (L)
R3053		Circular feed in manual mode Travel range X+ data \$3 (L) Circular feed in manual mode Travel range X+ data \$3 (H)
R3056		Circular feed in manual mode Travel range X- data \$3 (L)
R3057		Circular feed in manual mode Travel range X- data \$3 (H)
R3060		Circular feed in manual mode Travel range Y+ data \$3 (L)
R3061		Circular feed in manual mode Travel range Y+ data \$3 (H)
R3064		Circular feed in manual mode Travel range Y- data \$3 (L)
R3065		Circular feed in manual mode Travel range Y- data \$3 (H)
R3068		Circular feed in manual mode Gradient/arc center X data \$3 (L)
R3069		Circular feed in manual mode Gradient/arc center X data \$3 (H)
R3072		Circular feed in manual mode Gradient/arc center Y data \$3 (L)
R3073		Circular feed in manual mode Gradient/arc center Y data \$3 (H)
R3084		For specific users NC control signal 1 \$3 ▲
R3088		Specific users Manual skip motion direction (-) \$3 ▲
R3089		Specific users Manual skip motion direction (+) \$3 ▲
R3100		1st cutting feedrate override \$4
R3101		2nd cutting feedrate override \$4
R3102		Rapid traverse override \$4
R3103	CHPOV4	Chopping override \$4
R3104		Manual feedrate \$4
R3105		Manual feedrate \$4
R3106		Manual feedrate B \$4
R3107		Manual feedrate B \$4 (H)
R3108		1st handle/incremental feed magnification \$4
R3109		1st handle/incremental feed magnification \$4
R3110		2nd handle feed magnification \$4
R3111		2nd handle feed magnification \$4
R3112		3rd handle feed magnification \$4
R3113		3rd handle feed magnification \$4
R3117		Machine status animated warning display type \$4
R3118		PLC interrupt program number \$4 (L)
	1	
R3119		PLC interrupt program number \$4 (H)
R3119 R3120		
		Load meter display interface 1 \$4 (L)
R3120		Load meter display interface 1 \$4 (L) Load meter display interface 1 \$4 (H)
R3120 R3121 R3122		Load meter display interface 1 \$4 (L) Load meter display interface 1 \$4 (H) Load meter display interface 2 \$4 (L)
R3120 R3121 R3122 R3123		Load meter display interface 1 \$4 (L) Load meter display interface 1 \$4 (H) Load meter display interface 2 \$4 (L) Load meter display interface 2 \$4 (H)
R3120 R3121 R3122 R3123 R3124		Load meter display interface 1 \$4 (L) Load meter display interface 2 \$4 (H) Load meter display interface 2 \$4 (L) Load meter display interface 2 \$4 (H) Manual feedrate B override \$4
R3120 R3121 R3122 R3123 R3124 R3125		Load meter display interface 1 \$4 (L) Load meter display interface 2 \$4 (H) Load meter display interface 2 \$4 (L) Load meter display interface 2 \$4 (H) Manual feedrate B override \$4 External search device No. \$4
R3120 R3121 R3122 R3123 R3124 R3125 R3126		Load meter display interface 1 \$4 (L) Load meter display interface 1 \$4 (H) Load meter display interface 2 \$4 (L) Load meter display interface 2 \$4 (L) Load meter display interface 2 \$4 (H) Manual feedrate B override \$4 External search device No. \$4 External search program No. \$4
R3120 R3121 R3122 R3123 R3124 R3125 R3126 R3127		Load meter display interface 1 \$4 (L) Load meter display interface 1 \$4 (H) Load meter display interface 2 \$4 (L) Load meter display interface 2 \$4 (L) Load meter display interface 2 \$4 (H) Manual feedrate B override \$4 External search device No. \$4 External search program No. \$4 External search program No. \$4
R3120 R3121 R3122 R3123 R3124 R3125 R3126 R3127 R3128		Load meter display interface 1 \$4 (L) Load meter display interface 1 \$4 (H) Load meter display interface 2 \$4 (L) Load meter display interface 2 \$4 (L) Load meter display interface 2 \$4 (H) Manual feedrate B override \$4 External search device No. \$4 External search program No. \$4 External search program No. \$4 External search sequence No. \$4

8. Special Relay/Register

Device	Abbrev.	Signal name
SM16	THER	Temperature rise
SB0000		Data link restart
SB0001		Refresh instruction at standby master switching
SB0002		Data link stop
SB0004		Temporary error cancel request
SB0005		Temporary error cancel canceling request
SB0008		Line test request
SB0009		Parameter setting test request
SB000C		Forced master switching
SB0040		Data link restart acceptance
SB0041		Data link restart complete
SB0042		Refresh instruction acknowledgment status at standby master switching
SB0043		Refresh instruction complete status at standby master switching
SB0044		Data link stop acceptance
SB0045		Data link stop complete
SB0046		Forced master switching executable status
SB0048		Temporary error cancel acceptance status
SB0049		Temporary error cancel complete status
SB004A		Temporary error cancel acceptance status
SB004B		Temporary error cancel acceptance status
SB004C		Line test acceptance status
SB004D		Line test complete status
SB004E		Parameter setting test acknowledgment status
SB004F		Parameter setting test completion status
SB0050		Offline test status
SB0054		Shipping test acceptance
SB0055		Shipping test complete status
SB005A		Master switching request acknowledgment
SB005B		Master switching request complete
SB005C		Forced master switching request acknowledgment
SB005D		Forced master switching request complete
SB0060		Host mode
SB0061		Host type
SB0062		Host standby master station setting status
SB0065		Host station operation status
SB0066		Number of host occupied stations
SB0067		-
SB006A		Switch setting status
SB006B		Host station operation status
SB006C		Link status
SB006D		Parameter setting status
SB006E		Host station operation status
SB0070		Master station information
SB0071		Standby master station information
SB0073		Operation specification when driver has an error
SB0074		Reserved station specified status
SB0075		Error cancel station specified status
SB0076		Temporary error cancel station setting information
SB0077		Parameter receive status
SB0078		Host station switch change detection
SB0079		Master station return specification information
SB007B		Host master/standby master operation status
SB0080	1	Other station data link status
SB0081		Other station watchdog timer error status
SB0082		Other station fuse blown status
SB0083		Other station switch change status
SB0090	1	Host line status
SB0094		Transient transmission status
SB0095		Master station transient transmission status
SB00B4		Standby master station test result
SW0003	1	Multiple temporary error cancel station specification
SW0004	1	Temporary error cancel station specification
SW0008		Line test station setting

Revision History

Date of revision	Manual No.	Revision details
Oct. 2008	IB(NA)1500928-A	First edition created.
Jan. 2009	IB(NA)1500928-B	Mistakes were corrected.
Jul. 2010	IB(NA)1500928-C	Corrections are made corresponding to S/W version G1.
Nov. 2011	IB(NA)1500928-D	Corrections are made corresponding to S/W version H0.
Nov. 2011	IB(NA)1500928-D	Corrections are made corresponding to S/W version HU.

MITSUBISHI CNC

MODEL	M700V/M70V Series
MODEL CODE	100—214
Manual No.	IB-1500928
